About Schneider Electric

Schneider Electric is leading the Digital Transformation of Energy Management and Automation in Homes, Buildings, Data Centers, Infrastructure and Industries.

With global presence in over 100 countries, Schneider is the undisputable leader in Power Management – Medium Voltage, Low Voltage and Secure Power, and in Automation Systems. We provide integrated efficiency solutions, combining energy, automation and software.

In our global Ecosystem, we collaborate with the largest Partner, Integrator and Developer Community on our Open Platform to deliver real-time control and operational efficiency.

We believe that great people and partners make Schneider a great company and that our commitment to Innovation, Diversity and Sustainability ensures that Life Is On everywhere, for everyone and at every moment.

About This Catalog and Online Resources

Welcome to the 2020 Schneider Electric Valves and Actuators Catalog

Superior engineering, product design patents, ISO9001 certification, and Six Sigma lean manufacturing ensure our products conform to the highest standards of internationally recognized quality to deliver solid performance, unsurpassed value and exceptional reliability. It is recommended to view this catalog in PDF (Acrobat Reader required) from the **Exchange Extranet** or from **iPortal**.

At various places throughout the printed catalog, you can take a picture with a Smartphone of the "Quick Response" (QR) code graphics to be taken to an online page describing a product featured. Users of this catalog are reminded to also view product Selection Guides, Specification and Installation Sheets, as well as the separately available Wiring, Dimensions and Reference document [F-28125](#) from the Exchange Download Center. In this catalog, click on  to be directed to the SE website for the topic.

The Exchange Extranet and iPortal

Schneider Electric's **iPortal** enables customers to quickly and easily search and order products, track order status, review order history and download product documentation. **iPortal** is an important on-line tool and part of our commitment to provide comprehensive information for both internal and sales channels. Explore the [Exchange Extranet](#) for quick and easy access to assets; from software and firmware to technical documentation, as well as sales and marketing collateral. About this Catalog and Online Resources

Online Selection Tool for Schneider Electric Valves/Assemblies & Damper Actuators

[Product Selection Tool](#)

Schneider Electric's online selection tool for Valves/Assemblies and Damper Actuators quickly and easily puts a wealth of information at user fingertips to ensure specification of the optimum parts to fit their application.

Features

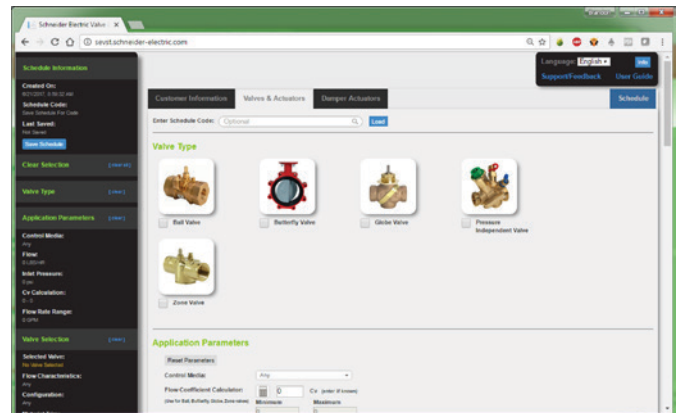

- Part selection based on calculators and drop down menus
- Save and load customer profiles, including customer name, country, contact information, job titles, project names and customer logos
- Schedule hydronic systems using the Valve Assembly selection feature
- Schedule damper applications using the Damper Actuator selection feature
- View, edit, change and adjust schedules on the Schedule page. Download completed schedules to Excel, pdf, BOM for easy upload to iPortal, or formatted for upload to Schneider Electric's Studio 360 suite
- Save schedules in progress to be worked on later or for use as a template for future projects

Browser Compatibility

- Chrome (recommended), Firefox, Safari, Edge, Internet Explorer 11 or greater

Original Valve Selection Tool

- The online Valve Selection Tool launched in 2017 has all the features of the previous Valve Selection Tool plus added features; the previous Tool and all earlier versions will not be updated

Selection Tool Product Categories

- Ball Valves
- Butterfly Valves
- Damper Actuators
- Globe Valves
- Pressure Independent Balancing Control Valves
- Zone Valves

Key Functions & Benefits

- Web-based Selection Tool (compatible with wide screen mobile devices)
- Schedule generation
- Sizing and Cv calculator
- List pricing on all products
- Schedule customization
- Quick access to related product documentation
- Favorite Products List Save Feature
- Schedule download to Excel, PDF, BOM
- Easy iPortal upload, Studio 360 File
- User Preferences and Customization
 - Company Information
 - Address & Logo
 - Favorite Parts List

MyExchange Sales Mobile App

Bring more “wow” to your customer meetings! MyExchange mobile app enables sales teams to share the latest marketing and sales content via their mobile device to make meetings and follow-up more productive.

With the MyExchange app you can:

- Easily access and view the latest assets (e.g. videos, presentations, specification sheets) while online
- Download assets for availability while offline
- Electronically mark up assets (highlight, pen) and save changes
- Manage a personal “channel” with your own presentation content
- Email assets to others (customers, consultants) and manage sharing activities/history
- Receive news and notifications on updates directly on your device
- To download MyExchange for iOS devices, visit the iTunes® App Store (search for “myexchange Schneider Electric”) or link to (in the U.S.):
 - MyExchange Schneider Electric on the App Store on iTunes.
 - For Android devices, access the app in the Google Play store by searching for ‘myexchange Schneider Electric’. See the Play Store for Android system requirements.

1. Damper Actuators

1. Damper Actuators

Spring Return Direct Coupled SmartX Actuators

Value-Driven General Purpose Applications

Mx4D-703x and Mx4D-803x Series

- Two position models controlled by SPST controller
- Floating models controlled by SPDT floating controllers
- Jumper selectable control function direct/reverse action
- Floating and Proportional models automatically adjust input span to match the damper/valve travel

Damp and Harsh Environment Applications

Mx40-717x Series

- Direct mount to round or square damper shaft
- 150 lb-in (17 N-m) torque rating, overload protection throughout rotation
- Oil immersed gear train provides continuous lubrication
- Automatic current sensing motor control provides extended reliability and repeatable timing
- Provides true mechanical clockwise or counterclockwise spring return operation for reliable positive close-off in airtight applications
- 5-year warranty, NEMA 4 housing (IEC IP56)
- Can be double mounted (gang mounting) to accommodate high torque application requirements (2 to 4 actuators)
- MS40-717x models provide position feedback signal

High Performance HVAC Applications

Mx40-704x Series

- Direct mount to round or square damper shaft
- 35 lb-in (4 N-m) torque rating
- Overload protection throughout rotation
- Optional built-in auxiliary switches
- True mechanical clockwise or counterclockwise spring return operation for reliable, positive close-off in airtight applications
- Visual position indicator
- Direct acting or reverse acting control mode available on proportional models
- Rotation limiting available
- Rugged die-cast housing for NEMA 2/IP54 rating

Mx41-7xxx Series

- Direct mount to round or square damper shaft
- 60 lb-in (7 N-m) torque rating
- 133 lb-in (15 N-m) torque rating
- Overload protection throughout rotation
- Optional built-in auxiliary switches
- Provides true mechanical clockwise or counterclockwise spring return operation for reliable positive close-off in airtight applications
- Direct acting or reverse acting control mode available on proportional models
- Rotation limiting available
- Rugged die-cast housing for NEMA 2/IP54 rating
- Manual override

High Torque HVAC Applications

Mx41-730x Series

- 270 lb-in (30 N-m) of torque with mechanical spring return, manual override, and Brushless DC Motor.
- Stall protected throughout rotation and reversible mounting.
- Models for Two Position 24 Vac/Vdc, and Two Position 100...230 Vac applications.
- Models for 2...10 Vdc input signal applications (field configurable for other input signals) with a position feedback signal and direct/reverse acting control mode selection switch on both sides.

- Models for auxiliary switch applications.
- Models for NEMA 4 / IP66 outdoor applications.
- 95° of rotation, adjustable with mechanical end stops and graduated position indicator showing 0°...95°.
- Can be double-mounted (gang mounting) to accommodate high torque application requirements.

a - Proportional models with a 2...10 VDC control signal accept a 4...20 mA signal with the use of a 500 ohm resistor.
 1 - Class 2 power source.
 3 - Also compatible with floating, pulse width modulating (PWM), and other DC signal inputs with use of the BEL-ZTH US Handheld Interface Module for Field Programming.
 4 - Timing field adjustable from 60...150 seconds with use of the BEL-ZTH US Handheld Interface Module for Field Programming.

Mx4D-703x and Mx4D-803x Series

30 lb-in Direct Coupled Damper Actuators

Product Description

Designed for controlling air dampers in building systems that require fail safe return, with two position, floating or proportional control.

Features

- Two position models controlled by SPST controller
- Floating models controlled by SPDT floating controllers
- Jumper selectable control function direct/reverse action
- Spring return models provide 30 in-lb (3.4 N-m) of torque
- Polymer housing rated for NEMA 2/IP54
- Overload protection throughout stroke
- Floating and proportional models automatically adjust input span to match the damper/valve travel
- Compact size allows installation in limited space
- Manual override allows positioning of dampers and valves
- Directly mounts to 1/2...3" Schneider Electric ball valves
- Polymer housing rated for plenum use

Specifications	
Control Signal	Refer to the tables for actuator models and control types.
Power Inputs	See table.
Connections	3 ft (91 cm) appliance (see * in table below) or 10 ft. (3 m) plenum cables, enclosure accepts 1/2" (13 mm) conduit connector.
Electrical Outputs	Position Feedback Voltage (proportional or floating only): For voltage ranges, the feedback signal is the same range as the input signal. The 4...20 mA current range and floating actuators have a 2...10 Vdc feedback signal. The feedback signal can supply up to 0.5 mA to operate up to four additional slave actuators.

Mechanical Outputs	Travel: 93° nominal. Manual Override: Allows positioning of damper or valve using manual crank. RA/DA Jumper: Permits reverse acting/direct acting control (MS4D models only).
Ambient Temperature Limits	Shipping & Storage: -40...160°F (-40...71°C). Operating: -22...140°F (-30...60°C). Humidity: 15...95% RH, non-condensing.
Location	NEMA 1, NEMA 2, UL Type 2 (IEC IP54) with customer supplied water tight conduit connectors. Enclosure is air plenum rated.
Agency Listings	UL 873: Underwriters Laboratories (File #E9429 Category Temperature-Indicating and Regulating Equipment). CUL: UL LISTED for use in Canada by Underwriters Laboratories. Canadian Standards C22.2 No. 24-93. This product fits in Installation Category (Overvoltage Category) II per EN 61010-1.

Mx40-704x Series 35 lb-in Direct Coupled Damper Actuators

Product Description

For spring return applications requiring floating, two-position, or proportional modulation control of dampers and valves in HVAC systems. Directly mounts to 1/2"–3" Schneider Electric ball valves.

Features

- Direct mount to round or square damper shaft
- Overload protection throughout rotation
- Optional built-in auxiliary switches
- True mechanical clockwise or counterclockwise spring return operation for reliable, positive close-off in airtight applications
- Visual position indicator
- Direct acting or reverse acting control mode available on proportional models
- Rotation limiting available
- Rugged die-cast housing for NEMA 2/IP54 rating

Specifications	
Control Signal	On-off, SPST control contacts or Triacs (500 mA rated). Floating point control, 24 Vac. Proportional, 6...9, 2...10 Vdc or 4 to 20 mA dc with a 500 Ω resistor.
Power Inputs	See table.
Connections	MA40-704x and MA40-704x-501 — 3 ft. (91 cm) long, appliance cables, 1/2 in. conduit connector. For M20 Metric conduit, use AM-756 adaptor. MF40-7043 and MF40-7043-501, MS40-7043 and MS40-7043-501 — 3 ft. (91 cm) long, plenum-rated cables, 1/2 in. conduit connector. For M20 Metric conduit, use AM-756 adaptor.
Electrical Outputs	Position Feedback Voltage "AO": 2...10 Vdc (maximum 0.5 mA) output signal for position feedback or operation of up to four slave actuators. One auxiliary switch available (select models). SPDT 6a resistive @24 Vac or 250 Vac.

Mechanical Outputs	Travel Rotation is limited to 95° ± 5° maximum, adjustable from 40...95° with a mechanical stop. RA/DA Switch: selects direct acting or reverse acting for proportional models. Position Indicator: Visual indicator, 0...1 (0 is the spring-return position).
Ambient Temperature Limits	Shipping & Storage: -40 F...160°F (-40...71°C). Operating: -22...140°F (-30...60°C). Humidity: 5...95% RH, non-condensing.

Mx41-7xxx Series

60 lb-in and 133 lb-in Direct Coupled Damper Actuators

Designed for controlling air dampers in building systems that require fail safe return, with two position, floating or proportional control.

Features

- Direct mount to round or square damper shaft
- Overload protection throughout rotation
- Optional built-in auxiliary switches
- Provides true mechanical clockwise or counterclockwise spring return operation for reliable positive close-off in airtight applications
- Direct acting or reverse acting control mode available on proportional models
- Rotation limiting available
- Rugged die-cast housing for NEMA 2/IP54 rating
- 5-year warranty

Mx40-717x Series

150 lb-in Direct Coupled Damper Actuators

Designed for controlling air dampers in building systems that require fail safe return, with two position, floating or proportional control.

Features

- Direct mount to round or square damper shaft
- Overload protection throughout rotation
- Oil immersed gear train provides continuous lubrication
- Automatic current sensing motor control provides extended reliability and repeatable timing
- Provides true mechanical clockwise or counterclockwise spring return operation for reliable positive close-off in airtight applications
- Can be double-mounted (gang mounting) to accommodate high torque application requirements (2 to 4 actuators)
- MS40-717x models provide position feedback signal
- Linkage required for Globe Valve Assembly.

Specifications	
Control Signal	Two wire, SPST or Triacs. SPDT floating control output, Triacs (500 mA rated), or 2 SPST contacts. Proportional, 2...10 Vdc or 4...20 mA dc with the addition of a 500 Ω resistor (not included).
Power Inputs	See table.
Connections	Class 1: 24 inch (61 cm) long appliance cables, 18 AWG color coded leads. 1/2 in. conduit connector. Class 2 Power and Control: 36 inch (91 cm) Long, 22 AWG color coded appliance cable pigtail leads. 1/2 in. conduit connector.
Electrical Outputs	Travel: Electronically limited to 92° ±1° (MS). MF-MA Mechanically limited To 101° ±1°.
Mechanical Outputs	Position Indicator: Pointer and scale are provided.

Mx41-730x Series

270 lb-in Direct Coupled Damper Actuators

Mx41-730x Series Spring Return SmartX Actuators are available with Two Position 24 Vac/Vdc, Two Position 100...230 Vac, and 2...10 Vdc input signal applications. It is possible to field configure the 2...10 Vdc input signal models for other input signals such as floating and pulse width modulating (PWM).

Features

- Mechanical spring return, manual override, and Brushless DC Motor.
- Stall protected throughout rotation and reversible mounting.
- Models for auxiliary switch applications.
- Direct mount to 1/2" ... 3/4" round or 1/2" ... 11/16" square damper shafts or to 3/4" ... 1.05" round with the field removal of a clamp insert.
- 95° of rotation, adjustable with mechanical end stops and graduated position indicator showing 0° ... 95°.
- Can be double-mounted (gang mounting) to accommodate high torque application requirements.
- 5 Year warranty.

1. Damper Actuators

Overview - NSR SmartX Damper Actuators

1. Damper Actuators

Direct coupled easy to install, and available with torque ranges from 44 to 300 lb-in for floating or proportional control.

High Performance HVAC Applications

- Mx41-60xx series**
- 44 lb-in (5 N-m) and 88 lb-in (10 N-m) torque.
 - Compact, lightweight design.
 - Easy-to-see position indicator.
 - Self-adapting capability for maximum flexibility in damper positioning.
 - Quiet, low-power operation.
 - Manual Override.

- Mx41-6153 series**
- Synchronous motor technology with stall protection.
 - Unique self-centering shaft coupling.
 - Manual override.
 - 133 lb-in (15 N-m) torque.
 - 5° preload as shipped from factory.

Damp and Harsh Environment Applications

- Mx41-63xx series**
- 300 lb-in (34 N-m) torque.
 - NEMA Type 4 housing (IEC IP56).
 - Custom automatic current sensing motor control provides extended reliability and repeatable timing.
 - Direct coupled to the damper shaft with dual industrial hardened universal mounting clamps.
 - Integral wiring for proportional control by 2...10 Vdc or 4...20 mA dc.
 - Clockwise or counterclockwise rotation is determined by actuator mounting position.

- Plenum cable standard.
- Independently adjustable dual auxiliary switches option available (Mx41-6083-502).
- Feedback position output signal available (MS41-6043/6083 series).
- c-UL-us LISTED and CE marked.

- Mechanical range adjustment capabilities.
- Independently adjustable dual auxiliary switches option available (MS41-6153-502).
- Built-in 1/2" conduit connection.
- c-UL-us LISTED and CE marked.

- Manual override for ease of installation and manual operation of damper.
- Accurate 92° travel digitally controlled.
- Integral position indication scale.
- Rugged die-cast housing.
- Oil immersed gear train provides continuous lubrication
- Rated for operating temperatures up to 140 °F (60 °C).
- Five year warranty.
- MS41-634x SmartX Actuators can be double mounted (gang mounting) to accommodate high torque application requirements (2 to 4 actuators).
- Position feedback signal.
- c-UL-us LISTED and CE marked.

Mx41-60x3 Series

44 lb-in and 88 lb-in Direct Coupled Damper Actuators

These direct coupled 24 Vac Non-Spring Return rotary electric SmartX Actuators are designed for three position (floating) control of dampers.

Features

- Compact, lightweight design.
- Easy-to-see position indicator.
- Self-adapting capability for maximum flexibility in damper positioning.
- Quiet, low-power operation.
- Plenum cable standard.
- Independently adjustable dual auxiliary switches option available (Mx41-6083-502).
- Feedback position output signal available (MS41-6043/6083 series).

Specifications	
Control Signal	MF41-60x3 — Floating three-position control, 24 Vac. MS41-60x3 — Proportional, 0 to 10 Vdc; input resistance 100 kW.
Power Inputs	See Table.
Connections	3 ft. (0.9 m) appliance cable, 18 AWG plenum-rated leads
Electrical Outputs	Position feedback voltage for MS41-6043/6083: 0...10 Vdc, 1 mA. Auxiliary Switches: Dual auxiliary switches available with MF41-6083-502, MS41-6083-502 when these actuators are ordered as separate units. Auxiliary switches are not offered with factory ball valve assemblies.

Mechanical Outputs	Travel: Normal angle of rotation is 90°, limited to a maximum of 95°. Field adjustable to limit travel on either end of stroke.
Ambient Temperature Limits	Shipping and storage: -40...158 °F (-40...70 °C) Operating: -25...130 °F (-32...55 °C) ambient. NOTE: Check the valve operating temperature limit. The minimum valve temperature limit is 20 °F (6.7 °C) 5...95% RH, non-condensing.

Mx41-6153 Series 133 lb-in Direct Coupled Damper Actuators

The direct-coupled, 24 Vac, non-spring return electronic SmartX actuator is designed for modulating and three-position control of building HVAC dampers requiring up to 133 lb-in (15 N-m) torque.

Features

- Synchronous motor technology with stall protection
- Unique self-centering shaft coupling
- 5° preload as shipped from factory
- Mechanical range adjustment capabilities
- Independently adjustable dual auxiliary switches option available (MS41-6053-502).

Mx41-634x Series 300 lb-in Direct Coupled Damper Actuators

Direct Coupled SmartX Actuators are designed to be used in both damper and valve control applications. The MS41-634x series actuators are over the shaft non-spring return actuators compatible with 2...10 Vdc or 4...20 mA dc¹ control signals.

Features

- Custom automatic current sensing motor control provides extended reliability and repeatable timing
- Direct coupled to the damper shaft with dual industrial hardened universal mounting clamps
- Clockwise or counterclockwise rotation is determined by actuator mounting position
- Accurate 92° travel digitally controlled
- Integral position indication scale
- Oil immersed gear train provides continuous lubrication
- Rated for operating temperatures up to 140 °F (60 °C)
- Five year warranty
- MS41-634x SmartX Actuators can be double-mounted (gang mounting) to accommodate high torque application requirements (2 to 4 actuators)
- Position feedback signal

Specifications	
Control Signal	SPDT floating control input; Triacs (500 mA rated) or 2 SPST contacts Floating: 24 Vac ± 20% Proportional: 2-10 Vdc 4-20 mA dc ^a
Power Inputs	See table.
Connections	3 ft. (91 cm) Appliance cable, 1/2" conduit connectors
Electrical Outputs	Travel: Mechanically limited to 101° ±1°

Mechanical Outputs	Overload Protection: Throughout rotation. Angle of Rotation: 93° nominal. Position Indication: Scale numbered from 0...95° Manual Override: Allows manual positioning.
Ambient Temperature Limits	Shipping & Storage: -40...160°F (-40...71°C). Operating: -25...140°F (-32...60°C). Humidity 5...95% non-condensing
Location	NEMA Type 1. NEMA Type 4 (IEC IP56) with customer supplied water tight conduit connectors
Agency Listings	c-UL-us LISTED per UL 873 and CAN C22.2 No.24-93. CE compliant to directives LVD, EMC, and RoHS2.

a - With the addition of a 500 ohm resistor (AM-708).

1. Damper Actuators

0453X Series Two-Position Damper Actuators

Product Description

The 0453L, light duty damper actuators are designed for a variety of two-position, spring return, damper applications. The 0453L uses a two-wire thermostat control.

The 0453H, medium duty damper actuators are designed for a variety of two-position, Spring Return damper applications. The 0453H uses a two-wire thermostat control.

The 0453R, heavy duty damper actuators are designed for a variety of two-position, motor open and motor closed damper applications. The 0453R uses a three-wire thermostat control.

Features

- Available with end switch
- Linkage or direct drive available
- Hysteresis synchronous motor with a “lost motion” drive to protect the gear train from closing shock

2-Way and 3-Way Globe Valves

The Venta VB-7200 Series 1/2" ... 2" 2-Way globe valves feature the industry's highest performance, most energy efficient control valves for chilled water, hot water and steam applications. The Venta VB-7300 Series 1/2" ... 2" 3-Way globe valves provide efficient control for chilled and hot water applications. Units have a patented precision plug for high rangeability, providing efficient heat transfer over a broad range of HVAC applications. The Venta seal design provides tight close-off to ensure energy efficiency and provides a high tolerance to high differential pressures. Venta globe valves are used for two-position, floating or proportional control applications. Valve assemblies may be purchased from the factory or purchased separately, requiring a linked actuator.

Features

- High rangeability provides fine, accurate control for more efficient, responsive and comfortable regulation.
- Tight sealing with ultra-low energy leakage on shutoff for energy conservation with soft seating.
- High differential-pressure rating of up to 87 psi for reliable operation in demanding applications.
- Very low Cv models (as low as 0.1) for precise control of small and light-load applications.
- Multiple Cv and fitting choices to match loads and piping.
- RoHS compliant product is environmentally friendly and meets ANSI, PED, CRN and other standards.
- Stroke positions are suitable for all Schneider Electric actuators.
- Stem strength exceeds:
 - 600 lb. force on 2-Way and mixing valves
 - 300 lb. force on Diverting valves

DANGER: Do not use these valves for combustible gas applications. They are not rated for combustible applications; and if used in these applications gas leaks and explosions could result.

a - To minimize noise, ensure the flow rate in the piping is less than 10 ft (3m) / second and the differential pressure is less than 35 psi (241 kPa). Operating with differential pressures above 35 psi may result in additional noise but is acceptable up to 87 psi (600 kPa). Operating within the cavitation zone may result in noise and internal valve damage.

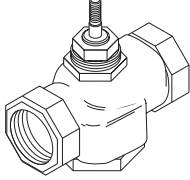

b - Maximum recommended differential pressure in open position. Do not exceed recommended differential pressure (pressure drop), as integrity of parts may be affected.

a - To minimize noise, ensure the flow rate in the piping is less than 10 ft (3m) / second and the differential pressure is less than 35 psi (241 kPa). Operating with differential pressures above 35 psi may result in additional noise but is acceptable up to 87 psi (600 kPa). Operating within the cavitation zone may result in noise and internal valve damage.

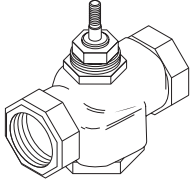

b - Maximum recommended differential pressure in open position. Do not exceed recommended differential pressure (pressure drop), as integrity of parts may be affected. Exceeding maximum recommended differential pressure voids product warranty.

2. VB-7000 Series Globe Valves and Sizing and Selection

3-Way Flow Patterns

Sizing for Water

Two-Position

Two-position control valves are normally selected “line Size” to keep pressure drop at a minimum. If it is desirable to reduce the valve below line size, then 10% of “available pressure” (that is, the pump pressure differential available between supply and return mains with design flow at the valve location) is normally used to select the valve.

Proportional and Floating

Proportional and floating control valves are usually selected to take a pressure drop equal to at least 50% of the “available pressure.” As “available pressure” is often difficult to calculate, the normal procedure is to select the valve using a pressure drop at least equal to the drop in the coil or other load being controlled (except where small booster pumps are used) with a minimum recommended pressure drop of 5 psi (34 kPa). When the design temperature drop is less than 60°F (33°C) for conventional heating systems, higher pressure drops across the valve are needed for good results.

2.1 Conventional Heating System

Design Temperature Load Drop °F (°C)	Recommended Pressure Drop (% of Available Pressure)	Multiplier on Load Drop
60 (33) or more	50%	1x Load Drop
40 (22)	66%	2x Load Drop
20 (11)	75%	3x Load Drop

Reducer Affects

On full flow bodies, offset the affects of directly connected reducer(s) by choosing flow coefficients 6% or more higher.

Cv (Flow Coefficient) Determination

The valves' water capacity is based on the following formula:

$$C_v = \frac{\text{GPM}}{\sqrt{\Delta P}} \quad \text{or} \quad C_v = \text{GPM} \sqrt{\frac{\text{Specific Gravity}}{\Delta P}}$$

Where:

Cv = Coefficient of flow

Cv is defined as the flow in GPM with ΔP = 1 psi with the valve completely open

GPM = U.S. gallons per minute (60°F, 15.6°C)

ΔP = Differential pressure in psi (pressure drop)

Proportional 3-Way Valves

Recommended Pressure Drop - Bypass Application: 50% of “available pressure,” or equal to pressure drop through the load at full flow.

3-Way valves in the return used to control output by throttling water flow to the load (bypass applications) are controlling output in the same manner as throttling 2-Way valves, and must be selected using the same high pressure drops if good control results are to be obtained.

Recommended Pressure Drop - Constant Flow Applications: 20% of “available pressure,” or equal to 1/4 of the pressure drop through the load at full flow.

3-Way valves used with individual pumps to control output by varying water temperature to the load (constant flow applications) are controlling output by mixing two water sources at different temperatures and do not require high pressure drops for good control results.

Water Capacity Graph Instructions

To select the appropriate valve Cv from the Graph:

1. Select the required flow from the “Flow in GPM” axis.
2. Select available pressure drop from the “Pressure Drop in psi” axis.
3. Select the appropriate line and follow to the Capacity Cv (Kv) listing and choose the closest valve Cv flow coefficient.
4. Confirm the selection by calculation from the water equations.

2.2 Flow Characteristics

2-Way valves with brass plugs have modified equal percentage flow curves and valves with stainless steel plugs have modified linear flow curves. With modified equal percentage flow curves, for equal increments of valve stem stroke, the change in flow rate with respect to valve stroke may be expressed as a constant percent of the flow rate at the time of the change. The change of flow rate with respect to valve stroke is relatively small when the valve plug is near the valve seat and relatively high when the valve plug is nearly wide open. With modified linear flow curves, the flow is directly proportional to the valve stem position.

2.3 Temperature Pressure Ratings

Consult the appropriate valve linkage installation instructions for the effect of valve body ambient temperatures on specific actuators. Ratings conform with published values and disclaimer.

Standards: Pressure to ANSI B16.15 Class 250 with 400 psig up to 150° F decreasing to 321 psig at 281° F, ASTM B584

CAUTION: Pressure/temperature ratings are for the body only, not the piping. Consult ANSI 816.22 for ratings of solder joint fittings. The lowest piping component ratings are the high limit.

2.7 Flow Characteristics

3-Way mixing valves are designed so that the flow from inlet ports, (A and B), to the outlet port (AB) is modified linear.

3-Way Diverting valves are designed so that the flow from the inlet port (B) to the outlet ports (A and AB) is modified linear.

Sequencing valves have both ports (A and B) closed off in the center of stroke and have modified linear flow for each port as it opens to supply it's coil.

Rangeability is greater than 100:1 for both the A and B ports.

2.8 Temperature Pressure Ratings

2. VB-7000 Series Globe Valves and Sizing and Selection

Cavitation Limitations on Valve Pressure Drop

A valve selected with too high a pressure drop can cause erosion of seals and/or wire drawing of the seat. In addition, can cause noise, damage to the valve trim (and possibly the body), and choke the flow.

Do not exceed the maximum differential pressure (pressure drop) for the valve selected.

The following formula can be used on higher temperature water systems, where cavitation could be a problem, to estimate the maximum allowable pressure drop across the valve:

$$P_m = 0.5 (P_1 - P_v)$$

Where:

P_m = Maximum allowable pressure drop (psi)

P_1 = Absolute inlet pressure (psia)

P_v = Absolute vapor pressure (psia)

Note: Add 14.7 psi to gauge supply pressure to obtain absolute pressure value.

For example, if a valve is controlling 200°F water at an inlet pressure of 18 psig, the maximum pressure drop allowable would be:

$$P_m = 0.5 [(18 + 14.7) - 11.53] = 10.6 \text{ psi}$$

(Vapor pressure of 200°F water is 11.53 psia)

Systems where cavitation is shown to be a problem can sometimes be adjusted to provide higher downstream back pressures. Valves having harder seat materials should be furnished if velocities are excessive.

Selection Instructions

Warning: Pressure reducers do not lower boiler temperatures significantly, resulting in superheated steam. Select only steam valves which can withstand temperatures near the original boiler temperature.

Caution: Do not size a steam valve with a pressure drop greater than 42% of the absolute pressure. Actuator must be rated to provide adequate close off pressure.

Two Position Control: Unless otherwise specified, select line-size, 2-Way valves, stem-up open or closed and are normally sized using a minimum of 10% of inlet pressure (psig).

Proportional

1. Go to rows which are nearest to minimum pounds/hour flow required.
2. Go to columns nearest to the assured supply pressure.
3. Note Cv values at the column/row intersection.
4. Select the listed valve Cv which provides adequate flow.
5. If reducers are used, expect flow to be reduced as much as 15%.

Reference

For further information, download CA-28 Control valve sizing, F-13755, from iPortal. The following is the terminology and the equations for the table above:

"Low Pressure" steam

(Up to 15 psig.)

$$Cv = Q / (2.1 \times (\Delta P \times (P1 + P2))^{0.5})$$

"High Pressure" steam

(Above 15 psig.)

$$Cv = Q / (1.38 \times P1abs)$$

Cv = Flow Coefficient

Q = Lbs. per hour of steam

ΔP = Differential pressure in psi (pressure drop)

P₂ = Outlet pressure in psia (absolute)
psig + 14.7 = psia (absolute)

K = 1 + (0.0007 x °F super-heat)

VB-7000 & VBS 9263 ½"...2" Hydraulic & Electric Close-Off

Note: The following tables offer a quick guide to valve actuator combination / close-off ratings.

2.14 Seat Leakage Classes

ANSI/FCI 70-2 Leakage Class	Maximum Seat Leakage
Class II	0.5% of rated Cv
Class III	0.1% of Rated Cv
Class IV	0.01% of Rated Cv
Class V	0.0005 ml per minute per inch of orifice diameter per psi differential

Close-off Ratings

Nominal actuator close-off ratings range from ANSI III (metal to metal trim) to ANSI IV and ANSI V (EPDM and PTFE Discs). Refer to VB-7000 Bronze Bodies for your specific application requirements.

Note: Valve body and actuator size determine the close-off capabilities. Example: All ½", 2-Way globe valves will make the same close-off, regardless of the Cv rating, for a given actuator.

Mx4x-6xxx and Mx4x-7000 Series Spring and Non-Spring Return Actuator/Linkage Assemblies with SmartX actuators.

Globe Valve Assemblies

The VA, VF, and VS-7000 series Linked Globe Valve Assemblies are complete actuator/valve assemblies that accept two-position, floating or proportional control, respectively, from a DDC system or from a thermostat, for control of hot water, chilled water and steam coils. These valve assemblies consist of linked spring return and non-spring return actuators mounted on 1/2"...2" (15 mm... 50 mm) 2-Way and 3-Way globe valve bodies, using a specially designed linkage assembly. 3-Way assemblies are available for mixing (1/2"...2") and Diverting (1/2"...2") applications. Typical applications include reheat on VAV boxes, fan coil units, hot and chilled water coils in air handling units, unit ventilators, and central system applications. Kits are available separately to allow field assembly of SmartX actuators to valve bodies.

Globe Valve Assembly Selection Procedure

Globe Valve Assembly Selection Procedure

When selecting a globe valve assembly, first determine the applicable codes for the control signal type, valve body configuration, end connection, port size and actuator according to Assembly Ordering on the next pages. Select a globe valve assembly part number as follows:

1. Control Signal Type, Valve Body Configuration and End Connection

Refer to Assembly Ordering and select the appropriate codes for the part-number fields.

2. Valve Size (Flow Coefficient)

If the required flow coefficient (Cv) has not been determined, do so as follows:

- Refer to Sizing and Selection to calculate the required Cv.
- Select the nearest available Cv value and corresponding valve body port code from Assembly Ordering.

3. Actuator & Linkages

Select the appropriate actuator and code, according to Assembly Ordering on the next pages based on the control signal type, required valve normal position, and voltage requirements. For detailed actuator information, refer to *Pg. 65, 4. VB-7000 Series Globe Valve Actuators and Linkages* for applicable actuator specifications.

Note: Linkages shown in Specification tables are supplied with the actuator. When shown in Optional Accessories the linkage must be ordered separately.

4. Close-off Pressure

Confirm, with respect to Actuator Close-Off Capacity, that the selected actuator and valve body combination provides sufficient close-off pressure. If no close-off pressure is shown, the valve body/actuator combination is not valid.

5. Available Space

If available space is a consideration, check the appropriate figure in the separately available Wiring, Dimensions and Reference document F-28125 from the Exchange Download Center.

b - Models without actuator codes are not offered as factory assemblies. Purchase the actuator and the valve body separately and field assemble. For available factory assemblies, consult the price schedule.

c - To determine a specific part number, see *Pg. 50, Ordering VB-7000 Globe Valve Assemblies* for the relevant part series.

d - Cv = gpm / √ΔP (where ΔP is measured in psi.) kvs = Cv / 1.156

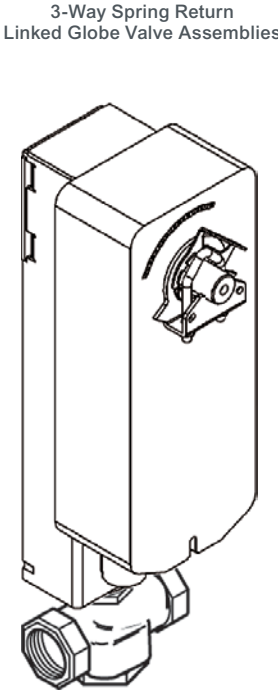

e - Close-off pressure ratings describe only the differential pressure which the actuator can close-off with adequate seating force. Consult valve body specifications for other limitations. The rating value is the pressure difference between the inlet and outlet ports.

a - MP-541X, MPR-5XXX use AV-7600-1 or AV-600 and AV-601.

b - Factory shipments have unpainted large springs. For 0...10 volt and 4...20 mA controllers, use blue and booster springs.

c - Close-off ratings for mixing or sequencing valves: (SU = "A" port, SD = "B" port). "A" port (SU) ratings equal pressure at port "A" minus pressure at port "B"; "B" port (SD) ratings equal pressure at port "B" minus pressure at port "A".

d - Close-off pressure ratings describe only the differential pressure which the actuator can close-off to standards with adequate seating force. Consult valve body specifications for other limitations.

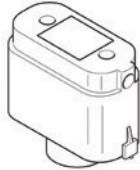

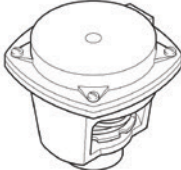

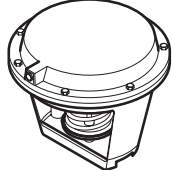

e - Diverting valves may be used in mixing applications with minor affects on flow.

f - SU- Stem Up; SD- Stem Down.

Smart starts at the foundation of the BMS

Control devices deliver critical data on system conditions to the BMS and react to needed adjustments to ensure optimal performance.

Our sensors, valves and actuators are the foundation of a comprehensive, integrated BMS. Input/output devices interpret critical data points, sending real-time responses to changes in the physical environment. Measurement of control at the Field Device level is critical for a BMS to perform at optimal efficiency.

MG350V Globe Valve NSR SmartX Actuators

MG350V

MG350V globe valve actuators are non-spring return electro-mechanical actuators for the control of two-way and three-way globe valves for fan coils, unit ventilators, reheat, cooling units, perimeter heating, and other applications.

Proportional, Floating, and Pulse Width Modulated (PWM) models are available for direct mounting on ½"…2" VB-7000 globe valves. The MG350V actuators are also compatible with older field installed ½"…1¼" VB-9000 globe valves as well as other valves (with the addition of AV-800 Globe Valve Adapters).

Benefits

- Tri-color LED status indication for motion indication, auto calibration, and alarm notification.
- Auto calibration provides precise control by scaling the input signal to match the exact travel of the valve stem.
- Proportional models with and without a position output signal with field selectable 2…10 Vdc and 0…10 Vdc input signals and selectable input signal action (reverse or direct acting).
- Floating and two-position models available with and without a position output signal.
- Pulse width modulated (PWM) models with field-selectable 0.59…2.93 sec and 0.1…25.5 sec input signal ranges with a position output signal.
- Stall protected throughout stroke.

MG350V

- Manual override with automatic release.
- Position feedback output signal models include field selectable 2…10 Vdc or 0…5 Vdc output signal.
- Removable wiring screw terminal with ½" conduit opening
- Integral linkage and self-adjusting valve position indicator

*The CE mark indicates RoHS2 compliance. Please refer to the CE Declaration of Conformity for additional details.

M400 M800 and M1500 NSR Forta Actuators

Forta M400A (VB) / M800A (VB) / M1500A (VB)

Forta M400A (VB) / M800A (VB) / M1500A (VB) series Non-Spring Return linear actuators are available in U-Bolt (Mx00A) and Screw Mount (Mx00A-VB) style for Schneider Electric globe valves with AV-821 linkage kits for mounting to VB-7000 valves. The Screw Mount style screws directly to the bonnet nut on VB-7000 valves (no adapter required). Applications include chilled or hot water and steam.

Benefits

- Field-selectable input signals include reverse and direct-acting, Floating or Proportional plus proportional sequencing input signal ranges.
- Floating configuration - controlled by a SPDT floating controller
- Proportional configuration - 0...10, 2...10 vdc or 4...20 mA with the addition of a 500 ohm resistor (included)
- Direct/Reverse action switch selectable
- Linear force: 90 lbf (400N), 180 lbf (800N), 337 lbf (1500N)
- Die-cast housing with plenum-rated plastic cover for NEMA 2 (IP54 vertical mount only) applications
- Manual override to allow positioning of valve
- Electronic valve sequencing and electronic flow curve (equal percentage or Linear) selection.
- Torque overload protection throughout stroke
- Easy "One Touch" input signal/stroke calibration

MA-52xx Hydraulic 2-Position SR Actuators

Application

These MA-52xx Series actuators are used for two-position control of valves which require a return to the normal position upon power interruption.

Features

- Two-position actuators controlled by an SPST controller
- Spring return
- 24 Vac and 120 Vac models are available
- An actuator with the part number suffix "-500" has a built-in, adjustable, SPDT auxiliary switch
- Die cast lower housing with ½" conduit opening and painted steel upper housing
- Hydraulic actuator with oil-immersed motor and pump

Typical Wiring for MA-5xxx Series Actuators

Application

The AV-7600-1 Linkage kit is used to field assemble MA-521x, MP-521x, MP-541x and MP-561x round hydraulic actuators to ½" through 2" VB-7000 series valve bodies.

Features

- Provides direct-couple interface between MA, MP and MPR-5xxx actuators and valve bodies.
- Kit fits all VB-7000 series valve bodies.
- Includes spring choices for higher 2-Way valve close off.

Specifications

- Actuator mounting: In any upright position above the center line of the valve body. For steam applications only, mount the actuator above the valve body at 45° from vertical.

MP-52xx Hydraulic Proportional SR Actuators

Application

These MP-52xx Series actuators provide electronic proportional control of valves requiring the return to normal position upon power interruption.

Features

- Compatibility with 2...15 Vdc System 8000 input signals.
- Proportional control by variable Vdc input signal.
- Spring return
- Fixed 3 Vdc operating span.
- Non-adjustable start point and non-positive positioning. Typically, one actuator is controlled from one Vdc output signal.
- 10,000 Ω or greater input impedance.
- 24 and 120 Vac models.
- Die cast lower housing with ½" (12.7 mm) conduit opening and painted steel upper housing.
- Hydraulic actuator with oil-immersed motor, transducer, and pump.

AV-601 Extension for MA, MP 5x1x-xxx, MPR-5x1x, MP-541x

Application

The AV-601 linkage extension kit is used to increase the allowable ambient temperature range of MA, MP-5x1x-xxx, MPR-5x1x and MP-541x Series actuators. The MP-541x and MPR-5x1x Series of actuators require the AV-601 extension. This kit provides thermal insulation between the valve and the actuator. It does not insulate the actuator from radiant or convective heat transfer.

Specifications

Kit consists of an extension coupling and a spacer.
 Dimensions: Add 2-1/32" (52 mm) to the "E" dimension for the valve assembly using an AV-601 linkage extension. Refer to complete dimensions in the separately available Wiring, Dimensions and Reference document F-28125 from the Exchange Download Center.

AK-42309-500 Positive Positioning Relay

AK-42309-500
Positive Positioning Relay

Figure 1 Piping Connections.

Application

Positive positioner pneumatic relay is used to accurately position an actuator stroke with respect to signal pressure from the controller. It can also be used to change the effective spring range of an actuator and increase the capacity of a controller.

Features

For accurate positioning of valve and damper actuators, this positioner utilizes a pilot-operated, relay-type position-sensing mechanism, much more sensitive to actuator position changes than some competitive “force-balance” positioners.

Model Number	Description
AK-42309-500	Positive Positioning Relay with Mounting Linkage.

Note: This model cannot be used with M556, M572, M573, M574 Series actuators. Use N800-0555 positioner with M556, M573, and M574.

Specifications	
Action	Direct (increase in output pressure to actuator with an increase in pilot pressure from controller).

VB-9313 2½" ... 6" 3-Way Mixing Valves

Application

VB-9313 series 3-Way mixing valves control hot or chilled water in heating or air conditioning systems. These valves must be piped with two inlets ("A" and "B" ports) and one outlet ("AB" port). They are used for two-position or proportional control applications. Valve assemblies require an actuator and a Linkage that may be factory or field assembled.

Features

- Valve sizes 2½" ... 6".
- 125 psig pressure rating per ANSI Standards (B16.1-1993) for flanged cast iron bodies.
- Spring-loaded TFE & EPDM packing.

VB-93xx 3-Way Mixing Flow Pattern

Sizing for Water

Two-Position

Two-position control valves are normally selected "line size" to keep pressure drop at a minimum. If it is desirable to reduce the valve below line size, then 10% of "available pressure" (that is, the pump pressure differential available between supply and return mains with design flow at the valve location) is normally used to select the valve.

Proportional and Floating

Proportional and floating control valves are usually selected to take a pressure drop equal to at least 50% of the "available pressure." As "available pressure" is often difficult to calculate, the normal procedure is to select the valve using a pressure drop at least equal to the drop in the coil or other load being controlled (except where small booster pumps are used) with a minimum recommended pressure drop of 5 psi (34 kPa). When the design temperature drop is less than 60°F (33°C) for conventional heating systems, higher pressure drops across the valve are needed for good results.

Conventional Heating System Pressure Drops

Design Temperature Load Drop °F (°C)	Recommended Pressure Drop (% of Available Pressure)	Multiplier on Load Drop
60 (33) or more	50%	1x Load Drop
40 (22)	66%	2x Load Drop
20 (11)	75%	3x Load Drop

Reducer Affects

On full flow bodies, offset the affects of directly connected reducer(s) by choosing flow coefficients 6% or more higher.

Cv (Flow Coefficient) Determination

The valves' water capacity is based on the following formula:

$$C_v = \frac{GPM}{\sqrt{\Delta P}} \text{ or } C_v = GPM \sqrt{\frac{\text{Specific Gravity}}{\Delta P}}$$

Where:

Cv = Coefficient of flow

Cv is defined as the flow in GPM with ΔP = 1 psi with the valve completely open

GPM = U.S. gallons per minute (60°F, 15.6°C)

ΔP = Differential pressure in psi (pressure drop)

Proportional 3-Way Valves

Recommended Pressure Drop

Bypass Application

50% of "available pressure," or equal to pressure drop through the load at full flow.

3-Way valves in the return used to control output by throttling water flow to the load (bypass applications) are controlling output in the same manner as throttling 2-Way valves, and must be selected using the same high pressure drops if good control results are to be obtained.

Constant Flow Applications

20% of "available pressure," or equal to 1/4 of the pressure drop through the load at full flow.

3-Way valves used with individual pumps to control output by varying water temperature to the load (constant flow applications) are controlling output by mixing two water sources at different temperatures and do not require high pressure drops for good control results.

Water Capacity Graph Instructions

To select the appropriate valve Cv from the Graph:

1. Select the required flow from the "Flow in GPM" axis.
2. Select available pressure drop from the "Pressure Drop in psi" axis.
3. Select the appropriate line and follow to the Capacity Cv (Kv) listing and choose the closest valve Cv flow coefficient.
4. Confirm the selection by calculation from the water equations.

VB-8xx3 Valve Body Characteristics

System Design Considerations

Note: The information in this section describes characteristics of the VB-8xx3 valve bodies, which are used in the Vx-8xx3 valve assemblies.

Control Precision

2-Way Valves:

The flow curve shown below is representative of all sizes. All valve plugs have lower gain when nearly closed to enhance control at low demand. 2-Way valves are nominally equal percentage and normally used for water and low pressure steam.

3-Way Valves:

3-Way mixing valves are designed so that the flow from either of the inlet ports to the outlet is nominally linear, which means the total flow from the outlet is almost constant over the stroke of the valve stem. The flow is limited at the initial opening similar to an equal percentage curve to enhance system stability. Typical flow characteristics of the VB-8303 series valve bodies are shown below.

Temperature/Pressure Ratings

Temperature and pressure ratings of 2-Way and 3-Way valves are shown below. Ratings conform with published values and disclaimer.

Rangeability

Rangeability is the ratio of rated flow to the minimum controllable flow through a valve. The nominal rangeability of the VB-8xx3 Series is greater than 100:1.

VB-8xx3-0-5-P (Cast Iron Body with Flanged End Fittings)

Standards: Pressure to ANSI B16.1, Class 125, with 200 psi (1379 kPa) up to 150 °F (65 °C), decreasing to 169 psi (1165 kPa) at 281 °F (138 °C).

Materials: Valve body: Cast iron, ASTM A126 Class B.

Trim: Stainless steel stem, forged brass plug, metal-to-metal or EPDM seat ring with TFE/EPDM packing parts and silicone packing grease.

Close-off Ratings

Nominal actuator close-off ratings are based on ANSI IV (0.01% leakage) for valves with EPDM seat rings such as VB-8213 and VB-8223. Metal-to-metal trim valves such as VB-8303 are designed for ANSI III (0.1% leakage).

Water Flow Coefficient (Cv)

Sizing a valve requires selecting a flow coefficient (Cv), which is defined as the flow rate in gallons per minute (gpm) of 60°F water that will pass through the fully open valve with a 1 psi pressure drop (ΔP). It is calculated according to the formulas shown in Cv Equation for Water and Cv Equation for Steam.

Since the flow rate through the heat exchanger is usually specified, the only variable normally available in sizing a valve is the pressure drop. The following information can be used to determine what pressure drop to use in calculating a valve Cv. Using the calculated Cv, consult the Water Capacity table on this page or the Steam Capacity to select the valve body with the nearest available Cv.

Caution: Be sure that the anticipated pressure drop across the valve will not exceed the close-off pressure rating and the maximum pressure differential rating listed in the Vx-8xxx Selection Guide, F-27199.

Two-position

Two-position control valves are normally selected "line Size" to keep pressure drop at a minimum. If it is desirable to reduce the valve below line size, then 10% of "available pressure" (that is, the pump pressure differential available between supply and return mains with design flow at the valve location) is normally used to select the valve.

Proportional

Proportional control valves are usually selected to take a pressure drop equal to at least 50% of the "available pressure." As "available pressure" is often difficult to calculate, the normal procedure is to select the valve using a pressure drop at least equal to the drop in the coil or other load being controlled (except where small booster pumps are used) with a minimum recommended pressure drop of 5 psi (34 kPa). When the design temperature drop is less than 60°F (33°C) for conventional heating systems, higher pressure drops across the valve are needed for good results (see the table Conventional Heating System below).

Conventional Heating System Pressure Drops

Design Temperature Load Drop °F (°C)	Recommended Pressure Drop (% of Available Pressure)	Multiplier on Load Drop
60 (33) or More	50%	1 x Load Drop
40 (22)	66%	2 x Load Drop
20 (11)	75%	3 x Load Drop

Secondary Circuits with Small Booster Pumps: 50% of available pressure difference (equal to the drop through load, or 50% of booster pump head).

Cv Equation for Water

$$Cv = \frac{GPM}{\sqrt{\Delta P}} \quad \Delta P = \left(\frac{GPM}{Cv} \right)^2 \quad GPM = Cv\sqrt{\Delta P}$$

Where:

Cv = Coefficient of flow.

gpm = Flow rate of water that will pass through fully open valve, measured in U.S. gallons per minute (60 °F (15.6 °C) water).

DP = Differential pressure (pressure drop), measured in psi.

Steam

Two-Position

Two-position zone valves and direct radiation valves are normally sized using a minimum of 10% of inlet pressure (psig).

Proportional

Proportional control valves are normally sized using:

- For low pressure (15 psig or less), use ΔP of 80% of gauge inlet pressure.
- For steam pressures greater than 15 psig, use ΔP of 42% of absolute (gauge plus 14.7) inlet pressure.
- When the Cv required is between two valve sizes, select the larger size. Do not size steam valves using a pressure drop greater than 42% of the absolute inlet pressure.

Cv Equation for Steam

$$Cv = \frac{Q \times K}{3\sqrt{\Delta P \times P2}} \quad Q = \frac{3Cv\sqrt{\Delta P \times P2}}{K}$$

Where:

Cv = Coefficient of flow.

Q = Flow rate of steam that will pass through fully open valve, measured as pounds per hour of steam.

ΔP = Differential pressure (pressure drop), measured in psi.

P2 = Outlet pressure, measured in psia (absolute pressure). P2 = Inlet pressure + 14.7 - ΔP.

K = 1 + (0.0007 x °F superheat). K = 1 for saturated steam.

Cavitation Limitations on Valve Pressure Drop

A valve selected with too high a pressure drop can cause erosion of discs and/or wire drawing of the seat. In addition, cavitation can cause noise, damage to the valve trim (and possibly the body), and choke the flow through the valve.

Do not exceed the maximum differential pressure (pressure drop) for the valve selected.

The following formula can be used on higher-temperature water systems, where cavitation could be a problem, to estimate the maximum allowable pressure drop across the valve:

$$P_m = 0.5 (P_1 - P_v)$$

Where:

P_m = Maximum allowable pressure drop

P_1 = Absolute inlet pressure (psia)

P_v = Absolute vapor pressure (psia)

Note: Add 14.7 psi to the gauge supply pressure to obtain the absolute pressure value.

For example, if a valve is controlling 200°F water at an inlet pressure of 18 psig, the maximum pressure drop allowable would be:

$$P_m = 0.5 [(18 + 14.7) - 11.53] = 10.6 \text{ psi (Vapor pressure of 200°F water is 11.53 psi.)}$$

Therefore, if the pressure drop for this valve is less than 10.6 psi, cavitation should not be a problem.

Systems where cavitation is shown to be a problem can sometimes be redesigned to provide lower inlet velocities. Valves having harder seat materials should be furnished if inlet velocities cannot be lowered.

For additional valve sizing information, see the Vx-8xxx Selection Guide, F-27199.

VB-9313 Valve Body Characteristics

Flow Characteristics

3-Way mixing valves are designed so that the flow from either of the inlet ports to the outlet is approximately linear, which means the total flow from the outlet is almost constant over the stroke of the valve stem. Typical flow characteristics of VB-9313 series valve bodies are shown below.

Typical Flow Characteristics

Rangeability

Rangeability is the ratio of rated flow to the minimum controllable flow through a valve. For mixing valves, control begins as soon as plug displacement allows flow. Thus, 3-Way valve rangeability normally exceeds 500:1, which is the reciprocal of 0.2% nominal leakage.

Water

Two-position

Two-position control valves are normally selected "line Size" to keep pressure drop at a minimum. If it is desirable to reduce the valve below line size, then 10% of "available pressure" (that is, the pump pressure differential available between supply and return mains with design flow at the valve location) is normally used to select the valve.

Proportional to Bypass Flow

Proportional mixing valves used to bypass flow are piped on the outlet side of the load to throttle the water flow through the load and therefore control heat output of the load. These valves are usually selected to take a pressure drop equal to at least 50% of the "available pressure." As "available pressure" is often difficult to calculate, the normal procedure is to select the valve using a pressure drop at least equal to the drop in the coil or other load being controlled (except where small booster pumps are used) with a minimum recommended pressure drop of 5 psi (34 kPa). When the design temperature drop is less than 60°F (33°C) for conventional heating systems, higher pressure drops across the valve are needed for good results (see Conventional Heating System Pressure Drops table below).

Conventional Heating System Pressure Drops

Design Temperature Load Drop °F (°C)	Recommended Pressure Drop* (% of Available Pressure)	Multiplier on Load Drop
60 (33) or More	50%	1 x Load Drop
40 (22)	66%	2 x Load Drop
20 (11)	75%	3 x Load Drop

* Recommended minimum pressure drop = 5 psi (34 kPa).

Secondary Circuits with Small Booster Pumps: 13 50% of available pressure difference (equal to the drop through load, or 50% of booster pump head).

Temperature and Pressure Ratings for VB-9313 Series Valve Bodies

Proportional to Blend Water Flows

Proportional valves used to blend two water flows control the heat output by varying the water temperature to the load at constant flow. These valves do not require high pressure drops for good control results. They can be sized for a pressure drop of 20% of the “available pressure” or equal to 25% of the pressure drop through the load at full flow.

Cv Equation

Where:

- Cv = Coefficient of flow
- GPM = U.S. gallons per minute (60°F, 15.6°C)
- ΔP = Differential pressure in psi (pressure drop)

$$Cv = \frac{GPM}{\sqrt{\Delta P}} \quad \Delta P = \left(\frac{GPM}{Cv}\right)^2 \quad GPM = Cv \sqrt{\Delta P}$$

VB-8xx3/9313 Close-Off Pressure Capability

Cavitation Limitations on Valve Pressure Drop

A valve selected with too high a pressure drop can cause erosion of discs and/or wire drawing of the seat. In addition, cavitation can cause noise, damage to the valve trim (and possibly the body), and choke the flow through the valve. Do not exceed the maximum differential pressure (pressure drop) for the valve selected.

The following formula can be used on higher-temperature water systems, where cavitation could be a problem, to estimate the maximum allowable pressure drop across the valve:

$$P_m = 0.5 (P_1 - P_v)$$

Where:

- Pm = Maximum allowable pressure drop
 - P1 = Absolute inlet pressure (psia)
 - Pv = Absolute vapor pressure (psia) (Refer to the table below.)
- Note: Add 14.7 psi to the gauge supply pressure to obtain the absolute pressure value.

For example, if a valve is controlling 200°F water at an inlet pressure of 18 psig, the maximum pressure drop allowable would be:

$$P_m = 0.5 [(18 + 14.7) - 11.53] = 10.6 \text{ psi (Vapor pressure of 200°F water is 11.53 psi.)}$$

Therefore, if the pressure drop for this valve is less than 10.6 psi, cavitation should not be a problem.

Systems where cavitation is shown to be a problem can sometimes be redesigned to provide lower inlet velocities. Valves having harder seat materials should be furnished if inlet velocities cannot be lowered.

For additional valve sizing information, see the Vx-8xxx Selection Guide, F-27199.

Class II	0.5% of rated Cv
Class III	0.1% of Rated Cv
Class IV	0.01% of Rated Cv
Class V	0.0005 ml per minute per inch of orifice diameter per psi differential

Close-off Ratings (Unless Otherwise Specified)

Nominal actuator close-off ratings are based on ANSI V with EPDM discs; and PTFE discs in steam applications. Metal-to-metal trim, such as brass 3-Way and high-temperature stainless, are designed for ANSI III (0.1-% leakage).

Note: Valve body and actuator size determine the close-off capabilities.

Vx-8xx3 Series Balanced Globe Valve Assemblies

Schneider Electric VA, VF, VK, VK4, VS and VU-8xx3-xxx-5-P series valve assemblies are complete actuator/valve assemblies that accept two-position, floating, and proportional electric/electronic and proportional pneumatic control signals, for control of chilled water, hot water, or low pressure steam. These valve assemblies consist of pneumatic, electric, or electronic valve actuators either direct-coupled or linked to a 2½" ...6" 2-Way or 3-Way valve body with ASA flanged end connections.

VB-8xx3 Series Valve Bodies

VB-8xx3-0-5-P valve bodies are also available separately to allow field mounting of a variety of Forta, Schneider Electric SmartX or pneumatic actuators using the appropriate linkage.

Features

- Balanced plug design provides high close-offs using economical actuation
- Up to 125 psi (856 kPa) close-off on 2-Way models, 35 psi (240 kPa) on 3-Way models
- Universal 3-Way valve can be piped in either mixing or Diverting configurations
- Valve sizes 2½" ...6", ASA 125 flanged
- A variety of Forta, Schneider Electric SmartX and pneumatic actuators are available, either as factory assemblies or for field assembly
- ANSI IV shutoff (0.01% of Cv) on 2-Way models, ANSI III (0.1% of Cv) on 3-Way models
- Self-adjusting spring loaded TFE/EPDM packing
- Normally open, normally closed, and non-spring return models available
- Expanded temperature range of 20° to 281°F
- ISO 9001:2000 Certified Quality Management System
- Vx-9313 3-Way mixing valves offer many of the same features as the VB-8xx3 vales and a conventional mixing valve flow pattern.

VB-8000, VB-9000 Assembly Selection Procedure

Globe Valve Assembly Selection Procedure

When selecting a globe valve assembly, you must determine the applicable codes for the control signal type, valve body configuration, end connection, port size and actuator. Select a globe valve assembly part number as follows:

1. Control Signal Type, Valve Body Configuration and End Connection

Refer to *Pg. 111, Ordering VB-8000, VB-9000 Valve Assemblies* and select the appropriate codes for the part-number fields.

2. Valve Size (Flow Coefficient)

If the required flow coefficient (Cv) has not been determined, do so as follows:

- Refer to Sizing and Selection to calculate the required Cv.
- Select the nearest available Cv value and corresponding valve body port code.

3. Actuator & Linkages

Select the appropriate actuator and code, according to Assembly Ordering based on the control signal type, required valve normal position, and voltage requirements. For detailed actuator information, refer to the applicable actuator specifications on subsequent pages.

Note: Linkages shown in Specification tables are supplied with the actuator. When shown in Optional Accessories the linkage must be ordered separately.

4. Close-off Pressure

Confirm that the selected actuator and valve body combination provides sufficient close-off pressure. If no close-off pressure is shown, the valve body/actuator combination is not valid.

5. Available Space

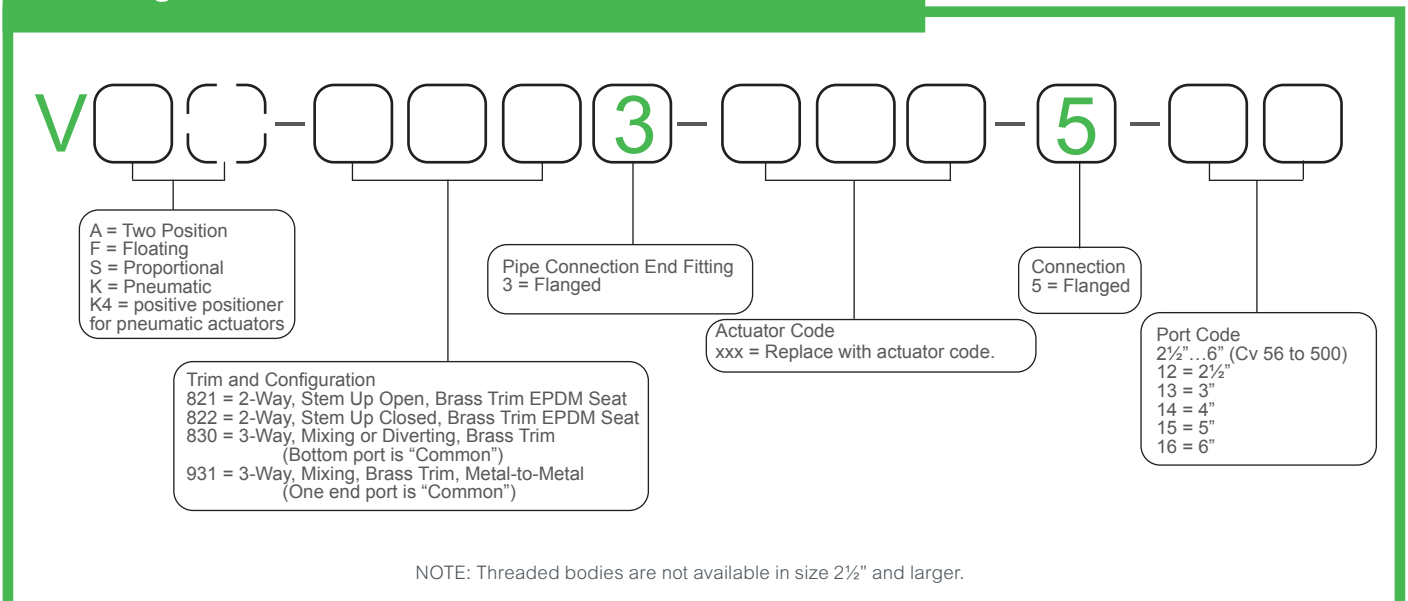

If available space is a consideration, check the appropriate dimensions in the separately available Wiring, Dimensions and Reference document F-28125 from the Exchange Download Center.

a - VB-8xxx - First value = maximum close off pressure, Second value = maximum operating differential. (Example: 125/35).
 b - VB-9213/VB-9223 2-Way valves have the same close offs as VB-9313 valves.
 c - VB-8xx3 valves use AV-497 linkage, VB-9313 valves use AV-495 linkage.
 d - AV-607-1 (2 1/2" ... 5" VB-8000 valves or 2 1/2" ... 4" VB-9313 valves), the Mx41-634x actuator is not compatible with the AV-607-1 linkage.
 e - AV-609-1 (6" VB-8000 valves or 5" ... 6" VB-9313 valves), the AV-609-1 linkage can be used with the Mx41-634x actuator on 2 1/2" ... 5" VB-8000 valves or 2 1/2" ... 4" VB-9313 valves, but the valve will stroke over a shorter portion of the control input signal

a - Close-off ratings for mixing valves: (SU = "A", SD = "B" port). "A" port (SU) ratings equal pressure at port "A" minus pressure at port "B". "B" port (SD) ratings equal pressure at port "B" minus pressure at port "A". Close-off ratings in the table are true only when the indicated supply air pressure is applied to the actuator. A change in air pressure at the actuator alters the actual close-off pressure.

b - Close-off pressure ratings describe only the differential pressure which the actuator can close-off to standards with adequate seating force. Consult valve body specifications for other limitations.

c - SU - Stem Up; SD - Stem Down. For piping information refer to the separately available Wiring, Dimensions and Reference document F-28125 from the Exchange Download Center for flow pattern.

d - Factory valve assemblies are available only with positive positioner.

e - Includes AV-496 linkage.

f - Includes AV-495 linkage.

7. VB-8/9000 Series Globe Valve Actuators and Linkages

MK-88/8911 SR Pneumatic Actuators

Application

MK-8800 series actuators are used to control 2½"–4" VB-9000 series valves. MK-8900 series actuators are used to control 5" and 6" VB-9000 series valves.

MK-88/8900 Actuator Specifications	
Effective Area	100 sq. in. (645 cm ²)
Construction	Housing: Die cast aluminum. Diaphragms: Replaceable beaded molded neoprene.
Stroke	See table below.
Spring	Retracts actuator shaft and raises valve stem on loss of air pressure.
Nominal Range	See table below.
Starting Point	Adjustable ± 1 psi (7 kPa). Maximum Air Pressure: 30 psig (207 kPa).
Ambient Temperature Limits	Shipping: -40...220 °F (-40...104 °C). Operating: -20...220 °F (-29...104 °C).
Air Connection	1/8" FNPT
Valve Stroke Position Indication	1/8" (3 mm) increments
Mounting	In any upright position with actuator head above 45° of the center line of the valve body. Actuator head may be swiveled to any convenient position.
Dimensions	See table below.

Positive Positioning Relay

Positive positioner pneumatic relay is used to accurately position an actuator stroke with respect to signal pressure from the controller. It can also be used to change the effective spring range of an actuator and increase the capacity of a controller.

Features

For accurate positioning of valve and damper actuators, this positioner utilizes a pilot-operated, relay-type position-sensing mechanism, much more sensitive to actuator position changes than some competitive "force-balance" positioners.

Model Number	Description
AK-42309-500	Positive Positioning Relay with Mounting Linkage.

Note: This model cannot be used with M556, M572, M573, M574, and MK-12000 Series actuators. Use N800-0555 positioner with M556, M573, and M574.

Specifications	
Action	Direct (increase in output pressure to actuator with an increase in pilot pressure from controller).
Pilot input	0 to main air pressure, psig.
Output	0 to main air pressure, psig.
Construction	
Housing	Polysulfone
Diaphragm	Neoprene
Start point	Adjustable 1...12 psig (7...83 kPa).
Span	Adjustable 2...13 psi (14...90 kPa); factory set: 5 psig.
Stroke	Adjustable 2...13 psi (14 to 90 kPa); factory set: 5 psig with feedback spring for 7/16 to 5" stroke.
Supply air pressure	Clean, oil free, dry air required (refer to EN-123).
Maximum	30 psig (207 kPa).
Nominal supply	15...20 psig (103...138 kPa)
Environment	
Ambient temperature limits	Shipping: -40...160°F (-40...71°C). Operating: 32...140°F (0...60°C).
Humidity	5...95% R.H., non-condensing.
Locations	NEMA Type 1 (IP10).
Air connections	
"M" and "B"	Barbed for 1/4" O.D. plastic tubing.
"P"	Dual-contoured for 1/4" O.D. and 5/32" O.D. tubing.
Air consumption (air compressor sizing)	19 scim(5.2 mL/s) at 20 psig (138 kPa) supply.
Air capacity for sizing air mains	20 scim (5.5 mL/s).
Flow capacity	860 scim (235 mL/s) at 20 psig (138 kPa) supply.
Mounting linkage	All necessary linkage provided to assemble AK-42309-500 to the following actuator series; MK-6600, MK-6800, MK-6900, MK-8800 and MK-8900.
Dimensions	2½ H x 4½ W x 3 D" (64 x 114 x 76 mm).

Application

The AV-607-1 and AV-609-1 linkages are designed to link single or dual Schneider Electric SmartX spring return and non-spring return actuators to 1½"…6" VB-9313 and 2½"…6" VB-8xx3 globe valves.

Features

- Allows mounting of single or dual actuators Schneider Electric SmartX actuators
- AV-607-1 is compatible with Schneider Electric (Siebe, Barber-Colman, INVENSYS) 2½"…5" VB-8xx3, 2½"…4" VB-9313 and discontinued 2"…4" VB-9xxx valves and Schneider Electric SmartX actuators²
- AV-609-1 is compatible with Schneider Electric (Siebe, Barber-Colman, INVENSYS) 6" VB-8xx3, 5"…6" VB-9313 and 5" and 6" VB-92xx valves and Schneider Electric SmartX actuators²
- Maintenance-free construction
- Corrosion protected heavy-duty steel rack-and-pinion construction and metal housing
- Precision rack self aligns with the valve stem

2 - Check the appropriate valve selection guide for close-offs for your application. AV-607-1 and AV-609-1 replace AV-607 and AV-609 respectively

8. VBB/VBS and VB-2000 Series Ball Valve Assemblies

8. VBB/VBS and VB-2000 Series
Ball Valve Assemblies

Application

The VBB and VBS Series valves with SmartX Actuators are 2-Way or 3-Way, 1/2" or 3/4", characterized ball valves. The M3 and M2 SmartX Actuators are direct coupled to the VBB/VBS Series valves and accept two-position, floating or proportional control signals from a DDC system, controller, or thermostat for control of hot or chilled water, or solutions of up to 60% glycol. Typical applications include VAV reheat, fan coil units, hot and chilled water coils in air handling units, heat pumps and unit ventilators.

Features

- Easy product selection — all actuators fit all valve bodies.
- Fast, easy actuator installation — no linkage or tools required.
- Flow characterizing insert provides equal percentage flow characteristic for stable, accurate floating and proportional control.
- ANSI IV seat leakage (0.01%) for both 2-Way and 3-Way valves (A and B port).
- Brass and stainless steel trim models.
- Cvs from 0.3...10.
- Normally open, normally closed, and non-spring return assemblies available.
- Two-position, Floating or Proportional (0...5 Vdc, 0...10 Vdc, 5...10 Vdc, or 4...20 mA dc).
- Proportional actuator is direct or reverse acting.
- RoHS Compliant (VBS Assemblies).
- Reach Compliant.

Application Schematics

Typical applications

For simplicity, balancing valves and control devices are not shown.

Mixing applications

Ball Valve Assembly Selection Procedure

1. Select the actuator. When selecting a ball valve assembly, you must know the control signal type and voltage to first select an actuator. Consult the following tables: Table-1 covers two-position actuator specifications and model numbers, Table-2 covers floating actuator specifications and model numbers and Table-3 covers proportional actuator specifications and model numbers.
2. Select the valve body. The valve body model number is selected based on the line size (1/2" or 3/4"), ball material trim, and flow coefficient (Cv/Kv) required. Consult Table-4 and Table-5 for brass trim valve body specifications and model numbers and Table-6 and Table-7 for stainless steel trim valve body specifications and model numbers. See "Flow Coefficient Selection" for information in determining the flow coefficient.

Other considerations

1. General service conditions: Make sure the actuator is suitable for the anticipated ambient conditions and that the valve body is compatible with the system fluid temperature and pressure requirements.
2. Close-off pressure: Confirm that the VBB/VBS ball valve's close off rating is suitable for the valve control application.
3. Space requirements: If mounting space limitations are a consideration, check the actuator/valve assembly dimensions.
4. Pipe reducers: Refer to the tables herein (F-27395) for estimating effective Cvs when using pipe reducers.
5. Ordering information. You may order the actuator and valve body separately or as a factory assembly. To order a complete valve and actuator assembly, specify the valve body part number and the actuator part number separated by a "+." Example: To order actuator valve body VBB2N15 and M312A00 as a factory valve/actuator assembly, specify VBB2N15+M312A00.

Flow Direction

A notch cut into the stem indicator at the tip of the valve stem is an external indicator of where the closed portion of the ball sits internally. Check the notch position prior to assembling the actuator to verify the ball is orientated in the correct plane.

In the drawings below, the black mark on the stem indicator represents this stem notch.

Application Note for 2 and 3-Way Valves

VBB/VBS Series Ball Valves are Characterized Control Ball Valves designed so that flow through the A-port exhibits equal percentage flow, thus the A-port is the control port. In a 3-way valve, the B-port is the bypass port and flow through the B-port designed to be less than that of the A-port. In most applications, this reduced flow compensates for the pressure drop seen by coil supplied by the A-port.

VB-2000 Series Ball Valves with SmartX Actuators

Product Description

The Schneider Electric VA, VF, and VS-2xx3-xxx-9-xx series Ball Valve Assemblies are complete actuator/valve assemblies that accept two-position, floating, or proportional control signals from a DDC system or a thermostat, for control of hot or chilled water, or solutions of up to 50% glycol. They consist of direct-coupled SmartX spring return or non-spring return actuators mounted on 2-way (1/2" to 3") and 3-way (1/2" to 2") ball valve bodies. Typical applications include reheat on VAV boxes, fan coil units, hot and chilled water coils in air handling units, and unit ventilators.

Feature	Benefit
Close-offs of 40 to 130 psi.	Accommodates most close-off requirements.
Available in full range of line sizes, 1/2" to 3" for 2-way valves and 1/2" to 2" for 3-way valves.	Satisfies a wide range of applications.
Cvs from 0.33 to 266.	Permits optimal valve sizing, minimizing the need for pipe reducers.
Flow characterizing insert, made of glass-filled Noryl™.	Provides equal percentage flow characteristic so that the heat output of the coil is linear with respect to valve position.
Available in both spring return and non-spring return models.	Allows power loss mode requirement to be met for any given application.
Utilizes SmartX Actuators with two-position, floating, and proportional control.	Models to fit a wide range of applications.
All VB-2000 models equipped with pigtail leads.	Eases installation. Reduced electrician costs.
Low-friction seals and o-rings.	Allows the use of lower-torque actuators, reducing cost.
Valve body made of forged brass ASTM B283-06.	Rated for static pressure of 360 psi at fluid temperatures of 20 to 250 °F (-7 to 121 °C).
ANSI Class IV (0.01% of Cv) shutoff with 2-way valves.	Allows accurate control, saves energy.
Choices of spring return direction.	Provides Normally Closed or Normally Open spring return.
Thermally isolated mounting plate.	Protects the actuator from excess cold or heat from chilled or hot water passing through the valve. Discourages condensation.
Ball Valve Body/Linkage Assemblies are available separately. They include anti-rotation clips for SmartX Actuators.	Increases flexibility and minimizes inventory.

Ball Valve Assembly Selection Procedure

When selecting a ball valve assembly, you must determine the applicable codes for the control signal type, valve body configuration, end connection, port size, and actuator. Select a ball valve assembly part number as follows:

1. Control Signal Type, Valve Body Configuration, and End Connection
Refer to Ball Valve Assemblies and select the appropriate codes for these part number fields.
2. Valve Size (Flow Coefficient)
If the required flow coefficient (Cv) has not yet been determined, do so as follows:
 - a. Refer to Sizing and Selection to calculate the required Cv.
 - b. Select the nearest available Cv and corresponding valve body port code.
3. Actuator
Select the appropriate actuator and code according to Ball Valve Assemblies, based on the control signal type, required valve normal position, and voltage requirements. For detailed actuator information, refer to the applicable actuator specifications.

NOTE: If an actuator with auxiliary switch(es) is required, you may field-assemble a ball valve assembly using a ball valve body/linkage assembly (VB-2513-500-9-xx). For information on switch-equipped actuators, refer to actuator specifications.

4. Close-off Pressure
Confirm that the selected actuator and valve body combination provides sufficient close-off pressure. If no close-off pressure is shown, the valve body/actuator combination is not valid.
5. Available Space
Check the appropriate dimensional figure (Figure 1 through Figure 6) and its accompanying data table for dimension details.

a - Non-spring return 3-way ball valve assemblies are shipped open A to AB and a control voltage increase will close A to AB and open B to AB
 b - Spring return, 3-way mixing valves are normally closed, A to AB and a control voltage increase will close A to AB and open B to AB
 c - To find the corresponding flow coefficients for these port codes, refer to "3-Way Ball Valve Assemblies - Sizes, Port Codes, and Cvs" on page 145.
 d - To determine a specific part number, identify the actuator's control signal type ("A," "F," or "S"), actuator code, and P code. Refer to "Ball Valve Assemblies Using SmartX 8xx Actuators" on page 144.

Connections MA40-704x and MA40-704x-501	0.9 m (3 ft.) long, appliance cable For M20 Metric conduit, use AM-756 adaptor		
MF40-7043 and MF40-7043-501, MS40-7043 and MS40-7043-501	0.9 m (3 ft.) long, plenum rated cable. For M20 Metric conduit, use AM-756 adaptor		
Motor Type MA40-704x	Brush DC		
MF40-7043, MS40-7043	Brushless DC		
Outputs	Electrical		
Auxiliary Switches: Available when actuators are ordered as separate units. Auxiliary switches are not offered with factory ball valve assemblies.			
Mx40-7043-501 and MS40-7043-MP5	One auxiliary switch available. SPDT 6 A resistive @ 24 Vac, adjustable 0 to 95° (0 to 1 scale). Switch meets VDE requirements for 6 (1.5) A, 24 Vac		
MA40-7040-501	One auxiliary switch available. SPDT 6 A resistive @ 250 Vac, adjustable 0 to 95° (0 to 1 scale). Switch meets VDE requirements for 6 (1.5) A, 250 Vac.		
Position Feedback Voltage	For 2...10 Vdc proportional actuators, the feedback signal is the same voltage range as the input signal. The feedback signal can supply up to 0.5 mA to operate up to four additional slave actuators (proportional (MS) models only).		
Control Mode	Switch provided for selection of direct acting or reverse acting control mode on proportional models		
Timing MA40-704x	Approximately 50 sec.		
MF40- and MS40-7043	Approximately 130 sec.		
Auxiliary Power Supply MS40-7043-MP and MS40-7043-MP5	+20 Vdc @ 25 mA (max.)		
Mechanical			
Stroke	Angle of rotation is limited to a maximum of 95°, with mechanical stop

PopTop™ Modulating Spring Return Valves & Actuators

Spring Return

The most modern, cost-effective range of electrically operated, modulating, temperature control, Schneider Electric's patented equal percentage flow plug, standard in control valves up to 3.4 Kv, is designed for applications requiring a constant, level temperature. These highly reliable valves are designed specifically for use in fan coil, VAV reheat, unit ventilators, air handling unit, baseboard and radiant applications. The compact design installs in small compartments and still allows service access. Designed for use in closed hydronic heating and cooling applications.

Features

- Rugged Brass forged 20.6 BAR rated valve body
- Patented equal percentage flow plug up to 3.4 Kv
- Kv 0.86 to 6.9
- Manual override
- Position indicator
- Thermoplastic enclosure
- Jumper selectable operating ranges
- 24 VAC, 3-wire floating and 0-10 VDC, 0-5 VDC 5-10 VDC, or 4-20 mA proportional controls
- Chilled or hot water applications
- Time-out feature for extended life
- Meets or exceeds ANSI IV standard for close-off; equal to 0.01% of Kv
- UL Listed actuator

PopTop™ Modulating Non-Spring Return Valves & Actuators

Non-Spring Return

All of our PopTop Modulating valves and actuators feature a position indicator, manual override, thermoplastic enclosure, and time-out option. Modulating valves are designed for a fan coil, VAV reheat, unit ventilator, air handling unit, baseboard and radiant applications.

Features

- Rugged Brass forged 300 psig rated valve body
- Patented equal percentage flow plug up to 3.4 Kv
- Kv 0.86 to 6.9
- Manual override
- Position indicator
- Thermoplastic enclosure
- Non-spring return operation
- Jumper selectable operating ranges
- 24 VAC, 3-wire floating and 0-10 VDC, 0-5 VDC, 5-10 VDC, or 4-20 mA proportional controls
- Compatible with most DDC control systems
- Chilled or hot water applications
- Time-out feature for extended life
- Meets or exceeds ANSI IV standard for close-off; equal to 0.01% of Kv
- UL Listed actuator

PopTop™ Modulating Spring Return Valves & Actuators

Features

- Quicker installation time
- Easier maintenance
- Compatible with most DDC systems
- UL listed

Features

- Offers the same great features as the three-wire floating assemblies
- Operating range of 0 to 10 Vdc or 4 to 20 mA proportional control
- Jumper selectable operating ranges
- UL Listed

AG, AH Series

Features

- Hysteresis synchronous motor for long life.
- Spring return operation.
- Valve body rated for 300 psig (20.6 bar) static pressure.
- Available in a variety of voltages.
- Actuator mounts directly onto the valve body without the need for linkages or calibration.
- Manual opening lever (normally closed only).
- Actuator can be replaced without any tools, or removal of the valve from the system.
- VS series valves available for low pressure steam.

Modulating Spring and Non-Spring Return PopTop, Two-Way and Three-Way VM Assemblies Flow Patterns

Piping

- The three-way is only configured as normally closed. For normally open configuration to the coil, turn the valve around. For proportional valves, set the control action (direct or reverse accordingly).
- The valve should be used in a closed-loop system.
- All valves must be piped so the plug closes against the direction of flow. For two-way valves, flow is from port B to port A. For normally closed three-way valves, B is the service port and A is the bypass port. For normally open three-way valves, A is the service port and B is the bypass port.
- Three-way VM valves must be piped in a mixing configuration, not diverting.

CAUTION: Do not use VM series valves in "open" systems. Excess make-up water may cause damage to the valve.

Follow proper water treatment practices and system procedures. Refer to document F-26080; EN205, *Water and Steam System Guidelines*.

Note: Normally open actuators are not to be used on three-way valves to achieve normally open configurations. Use a normally closed actuator and pipe as shown in Figure-2.

Two-Position Spring Return PopTop Two-Way and Three-Way VT/VS Assemblies Flow Patterns

The VT/VS series are two-position spring return valves. When powered, the actuator moves to the desired position, tensing the spring return system. When power is removed the acutator returns to the normal position.

The VT/VS series two-position spring return valves can be purchased with an optional built-in auxiliary SPDT end switch for interfacing or signaling; for example, zone pump burner control.

10. Butterfly Valve Assemblies

10. Butterfly Valve Assemblies

Product Description

Schneider Electric's butterfly valve line offers a wide range of two- and three-way sizes, along with electric non-spring return, and spring return actuator models that operate with on/off, floating, or proportional control signals. All assemblies include industry leading butterfly valve features, stainless steel double "D" shafts, nylon 11 coated ductile iron disc machined to provide bubble tight shut off, minimum torque, and longer seat life. The tongue and groove resilient seat design with molded in O-ring eliminates the use of flange gaskets and allows for ease of maintenance or replacement of the resilient seat. These features provide years of optimum performance and reliability.

Applications

Typical applications include data centers, cooling towers, central system shutoff and bypass piping control, thermal storage, and chiller and boiler control. High Performance Butterfly Valves are ideally suited to both high pressure, high temperature, high cycle HVAC applications and mission critical HVAC applications. This includes chiller isolation, cooling tower isolation, change-over systems, large air handler's coil control, bypass and process control applications. With ANSI Class 150 rating, all valves are tested for bubble tight close-off to API 598 standards at maximum rated differential pressure.

Standard Features

2...18" two-way assemblies and 2...16" three-way assemblies

- Chilled/hot water/glycol applications
- EPDM resilient seats with tongue and groove design and build in O-ring seal
- Stainless steel double D stem, requires no pins or screws to connect the disc and stem
- Extended neck design for temperature isolation and ease of insulation installation
- Nylon 11 coated ductile iron disc
- Wide choice of pneumatic and electric actuators and control signals
- Cast iron lug bodies mate with ANSI class 125/150 flanges
- Bubble tight shut off
- Bidirectional Flow
- Series S70 NEMA 4 actuators available in 24 or 120 Vac

High Performance Features

- Double Offset Stem/Disc Design
 - Reduced seat wear, zero leakage, and low torque
- Blow-out Proof Stem
 - Safety and ease of use
- Energized RTFE Seat
 - Zero leakage, self-adjusting for wear and easy field replacement
- Pressure Assisted, but not Pressure Dependent Seat Design
 - Optimal performance and sealing at high or low differential pressures
- Adjustable PTFE Packing
 - Packing can be adjusted while the valve is in service
- Dead End Rating Equal to Nominal Pressure Rating
 - Allows the control valve to function as an isolation valve.

10. Butterfly Valve Assemblies

2.5" ... 18" 2-Way High Performance Assemblies

Product Description

Schneider Electric's High Performance Butterfly Valves are ideally suited to both high pressure, high temperature, high cycle HVAC applications and mission critical HVAC applications. This includes chiller isolation, cooling tower isolation, change-over systems, large air handler's coil control, bypass and process control applications.

With ANSI Class 150 rating, all valves are tested for bubble tight close-off to API 598 standards at maximum rated differential pressure.

Features

- Double Offset Stem/Disc Design
 - Reduced seat wear, zero leakage, and low torque
- Blow-out Proof Stem
 - Safety and ease of use
- Energized RTFE Seat
 - Zero leakage, self-adjusting for wear and easy field replacement
- Pressure Assisted, but not Pressure Dependent Seat Design
 - Optimal performance and sealing at high or low differential pressures
- Adjustable PTFE Packing
 - Packing can be adjusted while the valve is in service
- Dead End Rating Equal to Nominal Pressure Rating
 - Allows the control valve to function as an isolation valve.

Specifications

Service	Hot Water, Chilled Water, Condenser Water, Steam
Fluid Temperature Limits	-40...500 °F
Max Steam Pressure	On/Off 150 PSI Proportional 50 PSI
Sizes	2.5" ... 18"
Flow Characteristic	Modified Equal Percentage
Leakage	Bubble Tight

Materials	
Body	Carbon Steel
Stem	17-4 Stainless Steel
Disc	316 Stainless Steel
Seat	RTFE

11. Pressure Independent Balancing and Control Valves and Actuators

11. Pressure Independent Balancing and Control Valves and Actuators

actuators are  

Product Description

The SmartX PIBCV range is a comprehensive selection of automatic balancing and control valves that provide flow limitation, with full control authority over hydronic regulation.

Automatic balancing within PIBCV valves provide stable flow regulation regardless of pressure fluctuations in the system and all valves have an adjustable flow limitation set point. The control valve portion of the PIBCV further regulates the water/glycol flow from close-off up to the maximum flow limit setting.

Typical applications are temperature control of chillers, air-handling units, heat exchanges and terminal units such as fan coils, induction units and radiant panels.

Features

- Reduced Energy Consumption
 - Pressure independence ensures no overflow of water/glycol through the valve. Limiting water/glycol flow to the design load of the coil has a significant effect on energy efficiency since systems operate for the majority of the time on a partial load.
 - The overflow of water/glycol causes a degradation in heat transfer at the heat exchanger. Uncontrolled overflow of water/glycol beyond the design flow of the heat exchanger is an extremely wasteful and inefficient use of heat.
 - The correct and maximum design flow ensures a high

differential in supply and return temperatures to provide high operational efficiency of the chiller or boiler.

- Improved Comfort
 - The SmartX PIBCV valves are not affected by other valves in the system that may be opening and closing throughout the day or other piping system disturbances providing more constant, comfortable, room temperatures.
- Reduced Pumping Costs
 - A reduction in overflows through the network reduces pumping costs. A smaller pump head and equipment is required compared to traditional configurations.
- Reduced Installation Costs
 - Only one valve needs to be installed rather than two or three since the SmartX PIBCV covers the pressure balancing, flow limitation and control modulation.
- Easy and Quick Commissioning
 - SmartX PIBCV setup time is significantly reduced with a simple and accurate flow setting procedure without the need for flow charts, calculations or measuring equipment.
- Improved Reliability
 - Improved mechanical equipment reliability from reduced actuator movements.

SmartX PIBCV Summary

SmartX PIBCV valves and Actuators can be used with actuators for pressure independent balancing and control applications or without actuators for automatic flow limiting balance applications.

PIBCVs immediately react to all changes in system pressures, providing stable valve control independent from the fluctuating pressures in the piping system. No valve authority, pressure calculations or complicated valve flow setting calculations are required. At partial system load there is no resulting overflow because the valve always limits the flow corresponding to the design flow of the coil.

SmartX PIBCV valves with actuators include an integrated control valve with flow regulation for HVAC applications, plus an automatic flow limiting function for energy efficiency. A full range of Schneider Electric actuators are available for every control application including two position, proportional, floating, spring return open, spring return close, and non-spring return.

Applications

Variable flow systems: A SmartX PIBCV with a Schneider Electric actuator is used as a control valve for terminal units, like an AHU (Air Handling Unit), FCU (Fan Coil Unit) or radiation panel, and controls the required flow on every terminal unit maintaining hydronic balance in the system.

Constant flow systems: There are numerous applications in which SmartX PIBCV can be used. In a constant flow system with FCUs or in a one pipe heating system, SmartX PIBCVs can be installed as an automatic balancing valve in every riser. SmartX PIBCVs limit the flow to the set value, thus automatically achieving hydronic balance. Whenever an automatic flow limiter or a control valve is needed, the advantages of cost-saving properties are inherent with SmartX PIBCVs. This includes systems with (floor) heating/cooling, concrete core activation or radiation panels.

Radiation panel

Air handling unit (AHU)

Theory

The SmartX PIBCV valve consists of two parts:

1. Differential Pressure Controller
2. Control Valve

1. Differential Pressure Controller (PC)

The differential pressure controller maintains a constant differential pressure across the control valve. The pressure difference is balanced so that when the differential pressure across the control valve changes (due to a change in available pressure, or movement of the control valve) the pressure regulator automatically aligns to a new position. This brings a new equilibrium and therefore keeps the differential pressure at a constant level.

2. Control Valve (CV)

The control valve has a linear characteristic. It features a stroke limitation that allows adjustment of the value. The maximum flow allowed by the control valve can be adjustable to a percentage of the valve's maximum flow rate.

Control Performance

SmartX PIBCV actuators can be used to change the flow response from linear to logarithmic (equal percentage). This makes the SmartX PIBCV suitable for all applications, including AHUs, where the equal percentage characteristic is needed to get a stable control loop. The actuators can be switched from linear to equal percentage by changing a dipswitch setting.

Easy Implementation

- No Cv or authority calculations needed. Flow is the only parameter to be considered when designing.
- Compact design, essential when only limited space is available such as in fan-coil units.
- Easy commissioning and troubleshooting. No specialized staff or measuring equipment needed.
- Trouble-free segmentation of the building project. SmartX PIBCVs will automatically control the flow, even when sections of the installation are unfinished. There is no requirement to re-adjust the SmartX PIBCV flow setting after finalization of the building project.

Flow Direction

A SmartX PIBCV valve is mono-directional, meaning the valve operates when the arrow on the valve body is aligned with the flow direction. When this rule is ignored, the valve acts as a variable orifice that causes water/glycol hammer at sudden closing when available pressure has increased, or the valve has been set to a lower value.

In the case when a system condition allows backflows, it is strongly recommended to use a backflow preventer in order to avoid possible water/glycol hammer that can damage the valve as well as other elements in the system.

It is recommended to fit a strainer upstream of the valve to increase reliability and to follow water/glycol treatment guidelines as detailed in VDI 2035.

The pipework system should be flushed prior to the operation.

SmartX PIBCV Selection Options

There are three methods for selecting SmartX PIBCV valves and Actuators:

1. Complete Method: Valve Assembly Selection
2. Custom Method: Valve Body and Actuator Field Assembly
3. Valve Only Method: Automatic Flow Limited Balance

1: Complete Method: Valve Assembly Selection

To select a PIBCV valve assembly select the required flow rate and actuator type. For example, to select a PIBCV valve assembly with a flow rate of 1.5 GPM and a non-spring return proportional actuator refer to *Pg. 199, Table 1. Valve Assemblies ½...1¼" With Female NPT End Connectors, Without PT Ports*.

Select the 1.5 GPM flow rate with the left column of the table.

Select the actuator from the top row of the table.

The intersecting valve assembly part number from the left column and top row selections shows VP228E-15SN-L15-S101 which includes the set 1.5 GPM flow rate, installed actuator, female NPT end connectors, and metal tag with flow rate.

Specifications for the selected valve body actuators are in *Pg. 200, Table 3. Specification ½...1¼" Valve Body Actuators* and for the valve body in *Pg. 204, Table 12. Specification Threaded Version, ½...2"*.

2. Custom Method: Valve Body and Actuator Field Assembly

Select the individual parts then set the flow rate and field assemble a valve assembly.

Pg. 204, Table 12. Specification Threaded Version, ½...2" shows the valve body specifications and *Pg. 211, Table 23. ½...2" Valve Flow Ranges (Qmin to Qnom)*, and *Pg. 212, Table 24. 2½"...10" Flanged Valve Flow Ranges (Qmin to Qnom)*, show the valve body flow rate ranges.

For example, to select a valve body that can be used in the flow rate range of 1 to 2 GPM, from *Pg. 207, Table 17. Selection: ½"...2" Valve Body Tail Pieces*, select the VP-228E-15BQSNT valve body that does not include PT ports, or select the VP-228E-15BSQ valve body if PT Ports are required.

Other larger valves could also provide the 1 to 2 GPM flow rates, but the VP-228E-15BQSNT was selected because it will be using a higher percentage of its flow range (in general, best accuracy is achieved when a higher percentage of flow rate is used).

The ½" to 2" PIBCV valves use convenient valve body tail pieces for connection to the piping system.

From *Pg. 207, Table 17. Selection: ½"...2" Valve Body Tail Pieces*, select the desired ½" tail piece – part number 9112108015 for Female NPT, 9112110015 for Male NPT, or 9112109015 for Sweat. Each tail piece part number includes two tail pieces.

Pg. 200, Table 3. Specification ½...1¼" Valve Body Actuators shows the compatible actuators.

Select the MP131-24T for two position control, the MP131-24F for floating control, the MP-131-24MP for proportional control, the MP300-SRU for spring return open universal control, or the MP300-SRD for spring return close universal control. Universal control actuators provide both proportional and floating input functionality. The valve body flow can easily be set before the actuator is installed as shown in the *Pg. 198, PIBCV Flow Setting*.

3. Valve Body Only: Automatic Flow Limited Balance Example

PIBCV valves can be used without actuators to limit the circuit flow to an adjustable flow rate.

Pg. 204, Table 12. Specification Threaded Version, ½...2" shows the valve body specifications and *Pg. 207, Table 17. Selection: ½"...2" Valve Body Tail Pieces* and *Pg. 212, Table 24. 2½"...10" Flanged Valve Flow Ranges (Qmin to Qnom)* show the valve body flow rate ranges.

For example, to select a valve body that can be used in the flow rate range of 2 to 5 GPM from Table 23 select the VP229E-15BQHNT valve body part number. The ½" to 2" PIBCV valves use convenient valve body tail pieces for connection to the piping system.

From *Pg. 207, Table 17. Selection: ½"...2" Valve Body Tail Pieces*, select the desired ½" tail piece: part number 9112108015 for Female NPT, 9112110015 for Male NPT, or 9112109015 for Sweat. Each tail piece part number includes two tail pieces.

The 1½" and larger sized valves require a stem lock when used without an actuator as shown in *Pg. 203, Table 11. Application: Operation of PIBCV Valve Body Without Actuator* (which also shows application information for the valve bodies without actuators). The valve body flow can easily be set as shown in the PIBCV Flow Setting Section.

PIBCV Flow Setting

½...1¼" Size Valves

The calculated flow can be adjusted easily without using special tools. To change the presetting (factory setting is 100% for separately purchased PIBCV valve bodies) follow the four steps below:

- 1 Remove the black protective cover or the mounted actuator.
- 2 Raise the green pointer.
- 3 Turn (clock wise to decrease) to the new presetting.
- 4 Press the pointer back into the lock position. After the pointer is clicked back into place the presetting is locked.

The presetting scale indicates values from 100% flow to 20%. Clock wise turning would decrease the flow value while counter clock wise would increase it.

Example: VP229E-15HN

With this ½" valve the nom flow = 5 gal/min = 100% presetting.

To set a flow of 4 gal/min you have to set: $4/5 = 80\%$.

Schneider Electric recommends a presetting/flow from 20% to 100%.

To set a PIBCV valve to a Q_{high} setting above 100%, turn the green pointer counter clock wise from 100%. The Q_{high} setting is the scale setting plus 90°. For example, to set the VP229E-15HN to a flow rate of 5.5 gal/min, set $5.5/5.0 = 110\%$ setting. Obtain the 110% setting by turning the green pointer counter clock wise from 100% to 20% (20% and 90° = 110%). As shown on page 204, Q_{high} settings above 100% slightly increase the valve's required minimum differential pressure.

Table 11. Application: Operation of PIBCV Valve Body Without Actuator

Operation of the PIBCV valve body without an actuator for an automatic flow limiting balancing application.

PIBCV Valve Size	Valve Body Series	Valve Stem Lock Part Number	Recommended Installation and Valve Shut Off Capability
1/2"...1-1/4"	VP228E-xxxxxx, VP229E-xxxxxx	Use black cap provided with VP228E-xxxxxx or VP229E-xxxxxx valve body	Install valve in the supply water pipe for best shutoff valve performance. To shutoff valve tighten black cap (max. close off pressure is 14.5 psi). To shut off against a higher differential pressure set the valve flow to 0%.
1-1/2", 2"	VP220E-xxxxx	9114070000 (not included with valve body)	Install valve in either the supply or return water pipe. To shutoff valve tighten bottom knob (max. close off pressure is 232 psi)
2-1/2"...4"	VP220A-xxxxx		Install valve in either the supply or return water pipe. To shutoff valve tighten bottom insert with a 8 mm allen wrench (max. close off pressure is 232 psi)
5"...6"	VP221A-xxxxxx	9114071000 (not included with valve body)	No shut off knob, set the valve to a 0% flow setting to shutoff flow
8"...10"	VP222A-xxxxx	9114072000 (not included with valve body)	

The 9114070000, 9114071000, and 9114072000 Valve Stem Locks are secured to the valve body with a 10 mm allen wrench.

- See Pg. 206, Table 15. *Assembly Valve Body Configurations* for a listing of all PIBCV valve body part numbers.
- Factory setting of the valve is done at Q_{nom} (100%) or lower depending on flow rate ordered.
- Regardless of the setting, the valve can modulate below 1% of set flow.
- Δp = (P1-P3) min-max
- 87 psi Δp is possible if consideration has been made to the flow velocity, cavitation and noise. For application usage please speak with Product Support

Actuators for Floating and Proportional Control

Product Description

MP131 actuators are used together with automatically balanced combination valve type SmartX PIBCV for 1/2" to 1-1/4". Typical applications are temperature control and permanent automatic balancing on terminal units (fan-coils, chilled ceilings, air-handling units).

Features

- Gap detection at stem up position
- 3 point version
- Force switch-off at stem down position prevents overload of actuator and valve
- No tools required for mounting
- Maintenance-free lifetime
- Low-noise operation

Dimensions (mm)

Mounting and Installation

The actuator should be mounted with the valve stem in either horizontal position or pointing upwards. The actuator is fixed to the valve body by means of a ribbed nut which requires no tools for mounting. The ribbed nut should be tightened by hand.

1. Check the valve neck. The actuator should be in stem up position (factory setting) and mounted securely on the valve body.
2. Wire the actuator according to the wiring diagram.
3. Stem movement is indicated by the Position Indicator (a small pin riding in a channel as shown in (1) below).

Spring Return Multi-signal Actuators for VP228E/VP229E SmartX PIBCV, DN10-32 (1/2"-1 1/4")

Product Description

MP300-SRU/SRD actuators with Floating and Proportional control are low voltage motoric actuators for the SmartX PIBCV DN10-32 (1/2"...1 1/4") Valves. These actuators have a spring return safety function that provides for an open or close valve in the event of power loss. The Spring return safety function should not be used for two position control.

Features

- The advanced design incorporates load related 'switch-off' to ensure that actuators and valves are not exposed to overload.
- The advanced design incorporates a diagnostic LED, operational data capture and self stroking feature.
- Low weight and robust.
- Spring Return operation in the event of power failure.

MP500C, MP500C-SRU/SRD Multi-Signal Actuators

Multi-Signal Non-Spring/Spring Return Actuators for VP220x SmartX PIBCV, DN40...100 (1½...4")

Product Description

MP500C are linear electro-mechanical actuators for use with VP220x SmartX PIBCV valves, DN40...100, controlled by either an increase/decrease floating signal or by a range of modulating control signals in the range 0...10V. SRU/SRD models have a spring return feature. The U-Bolt connection allows quick and easy direct mounting onto the SmartX PIBCV VP220 valves.

MP500C-SRU/SRD

MP500C

Features

- Brushless DC motor.
- High resolution control board allows precise fluid control.
- Working range and end point switches adjusted automatically to the stroke of the valve.
- When driven electrically, firmware calibrates a consistent running time regardless of the valve stroke.
- During power loss SRU/SRD spring return drives the motor, generating power to the board, controlling braking speed which avoids mechanical stress and system water hammer.
- Actuators can be configured for either 3 point increase/decrease signal or various modulating control signals including sequencing.
- Stroke Indicators on the yoke provide clear visual indication of the valve opening/stroke status.

SR and NSR Multi-Signal Actuators for VP221 SmartX PIBCV, DN125-150 (5" ...6")

Product Description

MP2000 SRU/SRD/NSR Actuators with spring return safety function and non-spring return are for fine regulation of large control valves under the demand of the HVAC controller. MP2000 SR can be controlled by either a modulating or a 3-point control signal and is used specifically with the VP221x SmartX PIBCV valves.

Specifications

Features

- Manual operation mechanical and/or electrical
- Position indication, LED signalization
- Selectable speed 4 or 6 s/mm (3 or 6 s/mm NSR)
- Automatic Stroke Calibration
- Linear to EQ% Curve Adaptation
- Anti-oscillation function
- Voltage or current output signal U
- Auto detection of Y signal
- 3-point or modulating control selection
- Thermal and overload protection
- Precise regulation and fast response on floating signal (0.01 s)

Features

- Manual operation mechanical and/or electrical
- Position indication, LED signalization
- Selectable speed 3 s/mm or 6 s/mm
- Automatic adaptation of stroke to valve's end positions that reduces commissioning time (self-stroking)
- Integrated external switch
- Characteristic optimization
- Adjustable stroke limitation
- Anti-oscillation function
- Pulse or continuous output signal (K2, K4)
- Voltage or current output signal U
- External reset button
- Auto detection of Y signal
- 3-point floating or modulating control selection
- Galvanic isolation Y, U and output terminal K2, K4
- Thermic and overload protection
- Precise regulation and fast response on 3-point signal (0.01 s)

12. Foot Mounted Actuators

Foot Mount Actuators

Product Overview

MA-3/4xx Series: These actuators provide two-position operation of dampers, valves, and other equipment requiring the return to normal position upon power interruption.

MC-351/421/431: These actuators provide two-position operation of dampers or valves in heating, ventilating, and air conditioning systems, and similar applications where return-to-normal position is not required.

MP-3xx Series, MP-4xx Series, MP-2xxx Series, and MP-4xxx Series: These actuators are used for two-position, floating, and proportional control of dampers, valves, and program switches in heating, ventilating, air conditioning, and similar applications. Hazardous location models offer a sturdy cast aluminum case with bolted cover. They have two 3/4" pipe tapped openings for joints with rigid metal conduit. All wiring is brought out to separate terminals for ease of installation. These factory enclosure and actuator assemblies are Underwriters Laboratories Listed.

MP-9xxx Series Reversible and Proportional Electric Actuators: These actuators provide control of heavy dampers, large valves, and other high torque applications in heating, ventilating, air conditioning, and similar applications which do not require return to a normal position.

The CP-8301-xxx electronic actuator drive is designed to process a variable 2 to 15 Vdc signal from a controller to provide proportional control of an electric gear train actuator.

The CP-8391-716 and 913 electronic actuator drives are designed to process a variable 4 to 20 mA dc signal from a controller to provide proportional control of an electric gear train actuator.

The CP-9301 and CP-9302 electronic actuator drives process a variable input signal from a controller to provide proportional control of an electric gear train actuator.

MA-3/4xx Series Two-Position Oil-Submerged Actuators

Description

These actuators provide two-position operation of dampers, valves, and other equipment requiring the return to normal position upon power interruption.

Features

- SPST controller.
- Spring return.
- 24, 120 and 240 Vac models.
- SPDT auxiliary switch if actuator part number suffix is “-500.”
- Rugged die cast aluminum.
- Oil immersed motor and gear train.
- Models for hazardous locations are only available as a factory enclosure/ actuator assemblies.
- NEMA 4 with optional watertight conduit connectors, field supplied.

Specifications

Control circuit	Two wire
Spring return	CCW to original position when actuator is de-energized
Auxiliary switch (-500 models)	SPDT makes (or breaks) circuit at powered end of stroke (fixed)
Nominal damper area	Actuator sizing should be done in accordance with damper manufacturer's specifications
Environment

12. Other Products

MC-351/421/431 NSR Two-Position Actuators

Description

This actuator provides two-position operation of dampers or valves in heating, ventilating, and air conditioning systems, and similar applications where return-to-normal position is not required.

Features

- Two-position actuators controlled by SPDT controller.
- Non-spring return.
- 24 and 120 Vac models available.
- SPDT auxiliary switch is standard.
- Rugged die cast aluminum housings.
- Oil immersed motor and gear train.

Specifications

Control Circuit	Three wire, SPDT snap acting switch provided by a thermostat, pressure switch, or relay
Shaft Rotation	Unidirectional clockwise 180° when power is applied
Auxiliary Switch	Adjustable SPDT is standard. Factory set to make (or break) at mid-stroke

MP-3/-4xx, MP-2/-4xxx Series Reversible and Proportional Electric Actuators

Description

The MP Series Actuators are used for two-position, floating, and proportional control of dampers, valves, and program switches in heating, ventilation, and air conditioning applications or similar applications.

Features

- Proportional actuators with built-in feedback potentiometers.
- Spring return and non-spring return models available.
- 24 Vac, 120 Vac, and 240 Vac models are available.
- Die cast housings with four 1/2 in. conduit openings.
- Oil-immersed motor and gear train.

Specifications

Input Control signals: Refer to the Model Table for input control signal capability versus specific actuator models.

Floating	Requires one Single Pole Double Throw (SPDT) switch with floating (center off) position rated at 0.9 amps at 24 Vac or two Single Pole Single Throw (SPST) switches rated at 0.9 amps at 24 Vac
Two-position	
SPDT	Requires snap acting switch rated at 0.9 amps at 24 Vac
SPST	Can be used with certain spring return actuators. Switch must be rated to handle actuator power requirements
Microtherm	
Proportional	Electrical system with the following typical controllers: PP-22x Series, TP-1xx Series, TP-2xx Series, TP-3xx Series, TP-4xx Series, TP-1xxx Series, and TP-1xxx Series Control of a single actuator
Standard	Control of two actuators in sequence
Sequencing	Used typically for adjustable minimum position (five positions) of an economizer actuator
Five-position	Requires AE-504 paralleling relay
Slidewire and paralleling	AE-504 accepts 100Ω to 1000Ω slidewires
Voltage Vdc (TAC System 8000)	Requires CP-8301-xxx or CP-9301-xxx Series of solid state actuator drives. Refer to the Model Table
Current mAdc	Requires CP-9302-xxx Series of solid state actuator drives. Refer to the Model Table

Connections	
MP-3xx, 4xx, 2xxx, 4xxx	Coded screw terminals
Models -600 Suffix	Coded screw terminals except for input signal which are color coded pigtailed
Power Requirements	Refer to the Model Table to determine power requirements
Torque	Refer to the Model Table to determine the actuator torque rating
Nominal damper area	Actuator sizing should be done in accordance with damper manufacturer's specifications
Spring return	Refer to the Model Table for models that are spring return

Description

These actuators provide control of heavy dampers, large valves, and other high torque applications in heating, ventilating, air conditioning, and similar applications which do not require return to a normal position.

Features

- High torque proportional gear train actuators accept the following signals:
 - 100 to 1,000 slidewire (requires AE-504).
 - SPDT floating or snap-acting controller.
 - Variable Vdc.
 - Variable mAdc.
- Torque to 1,600 lb-in.
- Available in 120 Vac models.
- Standard SPDT auxiliary switch.
- Rugged die cast aluminum housings.
- Oil immersed motor and gear train.

The CP-8391-716 Series electronic actuator drive is designed to process a variable 4 to 20 mAdc signal from a controller to provide proportional control of an electric gear train actuator.

Features

- Mounts directly onto proportional, electric, gear train actuators.
- 4 to 20 mAdc operating range. with 250 impedance with field adjustable ranges of 2 through 7, 2 through 12, 7 through 12, 4 through 12, and 12 through 20 mAdc.
- 120 Vac applications.
- Color-coded pigtail leads.

Description

The CP-9301 and CP-9302 electronic actuator drives process a variable input signal from a controller to provide proportional control of an electric gear train actuator. The CP-9301 is preset at the factory for voltage input. The CP-9302 is factory preset for current input and has additional wiring for connection to an override switch, for those applications requiring an external override of the input signal. These drives are equipped with built-in jumpers and adjustable potentiometers, so that the type of input signal, deadband, input span, and start point may be reset in the field when necessary.

Features

- Mounts directly onto proportional, electric, gear train actuators.
- Power is supplied directly from the actuator.
- Jumpers for selecting either voltage or current input, as well as 3% or 5% deadband.
- Adjustable span and start point potentiometers.

Specifications

Mounting	Directly to an actuator The drive may be mounted on either the left or right side of the actuator, in a conduit opening adjacent to the low voltage wiring compartment.

a - Units with a "-2" suffix, e.g. MP-xxxx-xxx-2-x, include a built-in transformer (used for Microtherm ® or with AE-504) with secondary leads wired externally to terminals 7 (Blue, 12 Vac) and 8 (Red, 24 Vac) of the actuator.

Caution: When using the CP-9301 or CP-9302 with actuators containing an internal transformer, disconnect and tape off the red and blue leads before installing and powering the device. Failure to do so can result in damage to the actuator drive.

Note: Models prior to "-2" suffix had transformer wired directly to potentiometer. To disconnect the transformer, remove the back plate of the actuator, then disconnect and tape the transformer leads.

Section 230900 – INSTRUMENTATION AND CONTROL FOR HVAC

2.15 ACTUATORS

A. Electronic Direct Couple Damper (and Valve) Actuators

[Schneider Electric SmartX Actuators]

1. Manufactured, brand labeled or distributed by Schneider Electric
2. Direct-coupled type non-hydraulic designed for minimum 100,000 full-stroke cycles at rated torque.
3. Direct-coupled damper actuators must have a five-year warranty.
4. Size for torque required for damper seal at maximum design conditions and valve close-off pressure for system design.
5. Direct-coupled damper actuators should accommodate 3/8", 1/2" 1.05" round or 3/8"...1/2" and 3/4" square damper shafts.
6. Actuator operating temperature minimum requirements: 44, 88 and 133 lb.-in. are -25 °F...130 °F (-32 °C...55 °C). The 30, 35, 60, 150 and 300 lb.-in. are -25 °F ...140 °F (-30 °C... 60 °C). The 270 lb.-in. are -22 °F...122 °F (-30 °C...50 °C).
7. Overload protected electronically throughout rotation except for selected Floating actuators the have a mechanical clutch.
8. Spring Return Actuators: Mechanical fail safe shall incorporate a spring-return mechanism.
9. Non-Spring Return Actuators shall stay in the position last commanded by the controller.
10. Power Requirements: 24Vac/dc [120Vac] [230Vac]
11. Proportional Actuators controller input range from 0...10 Vdc, 2...10 Vdc or 4...20 mA models.
12. Housing: Minimum requirement NEMA type 2
13. Actuators with a microprocessor should not be able to be modified by an outside source (cracked or hacked).
14. Actuators of 133 and 270 lb.-in. of torque or more should be able to be tandem mount or "gang" mount.
15. Agency Listings: ISO 9001, cULus, CE and CSA

B. 1/2"...3/4" Ball Valve Electronic Actuators

[Schneider Electric VBB/VBS ball valves actuators]

1. Manufactured, brand labeled or distributed by Schneider Electric.
2. Size for torque required for valve close-off pressure for system design.
3. Coupling: Direct coupled to the valve body without the use of external devices or tools (snap-on).
4. Auxiliary End Switch (optional) is to be SPST 24 Vac/Vdc, 101 mA to 5 mA maximum on selected two-position models.
5. Controller Signal Two-position, Floating or Proportional (0...5 Vdc, 0...10 Vdc, 5...10 Vdc, or 4...20 mA dc). The design allows for changing selections via DIP switches without removal of cover.
6. Manual operating lever and position indicator must be standard on all models.
7. Power Requirements: 24 Vac for floating, proportional, and 110...230 Vac for two position multi-voltage types
8. Actuators must be available with either Spring Return (SR) or Non-Spring Return (NSR) models.
9. Operating Temperature Limit Floating is to be 32...140 °F (0...60 °C) Proportional 32...140 °F (0...60 °C) Two-Position 32...169 °F (0...76 °C)
10. Wiring (depending on model) Removable Terminal Block, 10 ft. (3.05 m) Plenum Cable, 18 in. (45 cm) Appliance Wire
11. Locations must be rated NEMA 2, IEC IP31. (Indoor Use Only.) Actuators with terminal block or plenum cable leads are plenum rated per UL file number E9429.
12. Agency Listings: ISO 9001, cULus, and CE.
13. Schneider Electric shall warrant all components for a period of 5 years from the date of production.

C. 2-way (½”...3”) and 3-way (½”...2”) Ball Valve Actuators

[Schneider Electric VB-2000 ball valves actuators]

1. Manufactured, brand labeled or distributed by Schneider Electric.
2. Size for torque required for valve close-off pressure for system design.
3. Actuators are to be available in spring return (SR) and non-spring return (NSR) models. Spring Return (SR) actuators are to provide a choice to return direction.
4. Actuators are to be available in models for two-position, floating and proportional control.
5. All actuator models are to be equipped with pigtail leads
6. Actuators must be available in models with manual override.
7. Actuators must be available in models with auxiliary switch(es).
8. Operating temperatures: Non-Spring Return (NSR) actuators with 44 and 88 lb.-in. of torque must be -25 to 130 °F (-32 to 55 °C). All other actuators are -22 to 140 °F (-30 to 60 °C)
9. Actuators must be NEMA 2 rated.
10. All actuators are to have a five-year warranty.
11. Agency Listings: ISO 9001, cULus, and CE.

D. Zone Valve Actuators-Two-position Spring Return (SR)

[Schneider Electric Erie Zone Valve PopTop™ Two-position valve actuators]

1. Manufactured, brand labeled or distributed by Schneider Electric.
2. Valves are to be two-position (On-Off), spring return (SR) with general or High Close Off models.
3. Actuator Voltage Models are 24 Vac @ 50/60 Hz, 110 Vac @ 50 Hz and 120 Vac @ 60 Hz, 230 Vac @ 50 Hz, 240 Vac @ 60 Hz, 208 Vac @ 50/60 Hz., 277 Vac @50/60 Hz.
4. End (auxiliary) Switch, 24 -240 Vac Models: 24...250 Vac/101 mA min. to 5 A max. and 9...30 Vdc @ 100 mA max. 277 Vac.
5. Actuators are to have manual override on normally closed (NC) models and assemblies to valves without the use of tools, linkages or calibration.
6. Actuators are to have a hysteresis synchronous motor.
7. North America Agency Listings: UL873: Underwriters laboratories (Category Temperature Indicating and Regulating Equipment). CUL: UL Listed for use in Canada by Underwriters Laboratory. Canadian Standards C22.2 No. 24.

E. 2”...18” 2-way and 2”...16” 3-way Butterfly Valve Non-Spring Return (NSR) Linear Electronic Valve Actuators with Linkage Butterfly Valve Actuators

[Schneider Electric S70 red w/hand wheel, w/heater actuators]

1. Manufactured, brand labeled or distributed by Schneider Electric.
2. The butterfly valve actuators are to be Non-Spring Return (NSR) two-position and proportional taking 0...10 Vdc or 4...20 mA models. All Actuators are to be NEMA 4, manual override (hand wheel) two auxiliary switches, and built-in heater.
3. Actuator close-offs and Cvs must be appropriate for the valve size in a typical HVAC application.
4. Actuators must be available in 24 Vac and 120 Vac models.
5. Actuators must have [Internal wiring isolation for parallel wiring multiple units that eliminates the risk of feedback from one actuator to another.
6. Proportional models must have feedback of 0...10 Vdc or 4...20 mA.
7. Actuator operating temperature shall be -40...150 °F (-40...60 °C).
8. Actuator agency listings (North America) UL, CSA and CE.

F. 2”...4” 2-way and 3-way Butterfly Valve Spring Return (SR) Electronic Valve Actuators

[Schneider Electric SmartX Mx41-7153 actuators]

1. Manufactured, brand labeled or distributed by Schneider Electric.
2. The butterfly valve actuators are to be Spring Return (SR) two-position and proportional taking 2...10 Vdc or 4...20 mA models. All Actuators are to be NEMA 2.
3. Actuator close-offs and Cvs must be appropriate for the valve size in a typical HVAC application.

4. Actuators must be available in 24 Vac models.
5. Actuators shall have two SPDT auxiliary switch models.
6. Actuators must have [Internal wiring isolation for parallel wiring multiple units that eliminates the risk of feedback from one actuator to another.
7. Proportional models must have feedback of 2...10 Vdc or 4...20 mA.
8. Actuator operating temperature shall be -22...140 °F (-12...60 °C)
9. Actuators are to have a 5-year warranty.
10. Actuator agency listings (North America) UL, CSA and CE

G. 2"...6" 2-way and 3-way Butterfly Valve Non-Spring Return (NSR) Electronic Valve Actuators

[Schneider Electric SmartX NR-22xx-5xx actuators]

1. Manufactured, brand labeled or distributed by Schneider Electric
2. The butterfly valve actuators are to be Non-Spring Return (NSR) two-position and proportional taking 0...10 Vdc or 4...20 mA models. All Actuators are to be NEMA 2.
3. Actuator close-offs and CVs must be appropriate for the valve size in a typical HVAC application.
4. Actuators must be available in 24 Vac models.
5. Actuators shall have two SPDT auxiliary switch models.
6. Actuators must have Internal wiring isolation for parallel wiring multiple units that eliminates the risk of feedback from one actuator to another.
7. Proportional models must have feedback of 2...10 Vdc or 4...20 mA.
8. Actuator operating temperature shall be -22...140 °F (-12...60 °C)
9. Actuators are to have a 5-year warranty.
10. Actuator agency listings (North America) UL, CSA and CE

H. ½"...2" Bronze Body, Linear Electronic Valve Actuators with 67 or 78 lbs. of force. Globe Valve Actuators

[Schneider Electric MG350V]

1. Manufactured, brand labeled and distributed by Schneider Electric.
2. Actuator must have bi-color LED status indication for motion indication, auto calibration and alarm notification.
3. When the actuator is properly mounted must have a minimum of a NEMA 2 (IP53) rating.
4. Actuators are to be non-spring return.
5. Actuators are to be floating (used for two-position) or proportional models.
6. Proportional models will have optional models with a position output signal with field selectable 2...10 Vdc and 0...10 Vdc input signals and selectable input signal direct or reverse acting.
7. Actuator must have auto calibration which provides precise control by scaling the input signal to match the exact travel of the valve stem
8. Actuators must come in models with Pulse Width Modulated (PWM) with field-selectable 0.59 to 2.93 sec and 0.1 to 25.5 sec input signal ranges with a position output signal
9. Actuators must have manual override with automatic release.
10. Models with position feedback output signal include field selectable 2...10 Vdc or 0...5 Vdc output signal
11. Removable wiring screw terminal with ½" conduit opening.
12. Actuator operating temperature ranges:
 - a. When controlling fluid up to 266 °F (130 °C) = ambient air temperature is to be 23...131 °F (-5...55 °C)
 - b. Fluid up to 281 °F (138 °C) = 23...127 °F (-5...53 °C)
 - c. Fluid up to 340 °F (171 °C) = 23...115 °F (-5...46 °C)
 - d. Fluid up to 400 °F (204 °C) = 23...102 °F (-5...39 °C)
13. Actuator agency Listings (North America)
 - a. cUL-us LISTED mark, per UL 60730-1 and -2-14 and CAN/CSA E60730-1 and -2-14 Automatic Electric Controls
 - b. NEMA 2
 - c. NEC class 2 FCC part-15 class B

- d. Canadian ICES-003

I. ½”...2” Bronze Body, Linear Electronic Valve Actuators with 105 lbs. of force Globe Valve Actuators

[Schneider Electric SmartX Mx51-7103 Series Linear SR Valve Actuator]

1. Manufactured, brand labeled and distributed by Schneider Electric.
2. Actuators must have Two- Position, Floating, and Proportional models.
3. Proportional models will a controller input signal of either a 0...10 Vdc, 2...10 Vdc, 4...20 mAdc, 0...3 Vdc, or 6...9 Vdc. Control function direct/reverse action is switch selectable on most models.
4. Actuator force is to be 105 lb. (467 newton) with ½” (13 mm) nominal linear stroke
5. Power requirements 24 Vac, 120 Vac or 230 Vac depending on model.
6. Actuator housings rated for up to NEMA 2/ IP54.
7. Actuator is to have overload protection throughout stroke.
8. Actuator Operating temperature -22...140 °F (-30...60 °C).
9. Actuator must automatically set input span to match valve travel.
10. Actuator must have manual override to allow positioning of valve and preload.
11. Actuator is to be spring return.
12. Actuator is to mount directly to valves without separate linkage.
13. Actuator is to have a 5-year warranty.
14. Actuator agency Listings (North America)
 - a. UL 873: Underwriters Laboratories (File #E9429 Category Temperature-Indicating and Regulating Equipment).
 - b. CUL: UL Listed for use in Canada by Underwriters Laboratories. Canadian Standards C22.2 No. 24-93.

J. ½”...2” Bronze Body (and other valves) Linear Electronic Valve Actuators with 220 of force Globe Valve Actuators

[Schneider Electric SmartX Mx51-720x Series Linear SR Valve Actuator]

1. Manufactured, brand labeled and distributed by Schneider Electric.
2. Actuators must have Two- Position for a SPST controller, Floating for a SPST controller, and Proportional models will a controller input signal of either a 0...10 Vdc, 2...10 Vdc, 4...20 mAdc, or 6...9 Vdc. Control function direct/reverse action is jumper selectable
3. Actuator is to be spring return.
4. Actuator will have 220 lb. force (979 newton) with ½” (13 mm) or 1” (25 mm) nominal linear stroke
5. Feedback on proportional model with 2...10 Vdc (max. 0.5 mA) output signal or to operate up to four like additional slave actuators.
6. Actuator operating temperature is 0...140 °F (-18...60 °C).
7. Actuator must automatically set input span to match valve travel
8. Actuator is to have a 24 Vac power supply on Two-position and Proportional models and 120 Vac on Two-position models.
9. Actuator is to be spring return.
10. Actuator housings rated for up to NEMA 2/ IP54
11. Actuator must have manual override to allow positioning of valve and preload
12. Actuator is to mount directly to vales without separate linkage.
13. Actuator is to have a 5-year warranty.
14. Actuator agency Listings (North America)
 - a. UL 873: Underwriters Laboratories (File #E9429 Category Temperature-Indicating and Regulating Equipment).
 - b. CUL: UL Listed for use in Canada by Underwriters Laboratories. Canadian Standards C22.2 No. 24-93.

K. ½”...2” Bronze Body, Spring Return (SR) Linear Electronic Valve Actuators with Linkage Globe Valve Actuators

[Schneider Electric SmartX Actuators]

1. Manufactured, brand labeled or distributed by Schneider Electric.
2. Actuators with 35, 60, 133, or 150 lb.-in of force depending on model.
3. Actuator housings rated for up to NEMA 2/ IP54 with a 150 lb.-in. rated a NEMA 4.
4. Actuators are to be spring return.
5. Actuators are to have Two-position, Floating and Proportional models.
6. Actuators must have overload protection throughout rotation.
7. Actuator have an optional built-in auxiliary switch to provide for interfacing or signaling on selected models.
8. Actuators are to have a 5-year warranty.
9. Actuator agency listings (North America)
 - a. UL-873 Underwriters Laboratories
 - b. Canadian Standards C22-2 No.24-83, CUL

L. ½”...2” Bronze Body, Spring Return (SR) Linear Electronic Globe Valve Actuators with Linkage. Non-Spring Return (NSR) Linear Valve Actuator with Linkage.

[Schneider Electric Forta M400A-VB, M800A-VB, M900A and M1500x-VB Screw Mounted on Venta VB-7000s]

1. Manufactured, brand labeled or distributed by Schneider Electric.
2. Actuators are to be either floating SPDT control or proportional control 0...10, 2...10 Vdc or 4...20 mA with a 500-ohm resistor included.
3. Actuators are to be direct/reverse with selectable DIP switches.
4. Actuators are to have 90 lb. (400N), 180 lb. (800N), or 337 lb. (1500N) of force on Non-Spring Return (NSR) 157 lb. of force on the Spring Return model. Note: Not every actuator is for every valve.
5. Actuators are to be powered with 24 Vac or 24 Vdc.
6. All Non-Spring Return (NSR) actuators are to be NEMA 2, vertical mount only. Spring Return (SR) actuators are to have NEMA 4 models.
7. Actuators must have manual override to allow positioning of the valve.
8. Actuators must have selectable valve sequencing and flow curves of either equal percentage or linear.
9. Actuators must have feedback.
10. Actuators must have internal torque protection throughout stroke.
11. The operating temperature is to be:
 - a. 122 °F (50 °C) For chilled water applications
 - b. 113 °F (45 °C) ambient at 281 °F (138 °C) fluid temperature
 - c. 107 °F (42 °C) ambient at 300 °F (149 °C) fluid temperature
 - d. 100 °F (38 °C) ambient at 340 °F (171 °C) fluid temperature
12. 90 °F (32 °C) ambient at 366 °F (186 °C) fluid temperature

M. 2 ½”...6” Cast Iron Flanged Globe Valve Body (and other valves) Non-Spring Return (NSR) Linear Electronic Valve Actuators with Linkage

[Schneider Electric Forta M800A and M1500A Tall U-Bolt Actuators]

1. Manufactured, brand labeled or distributed by Schneider Electric.
2. Actuators are to be either floating SPDT control or proportional control 0...10, 2...10 Vdc or 4...20 mA with a 500-ohm resistor included.
3. Actuators are to direct/reverse acting with selectable DIP switch.
4. Actuators are to have 180 lb. (800N) or 337 lb. (1500N) of force.
5. Actuators will need a 24 Vac or Vdc power supply.
6. Actuators are to be rated NEMA 2, vertical mount only.

7. Actuators must have manual override to allow positioning of the valve.
8. Actuators must have selectable valve sequencing and flow curves of either equal percentage to linear. A 2...10 Vac feedback.
9. Actuators must have [Internal torque protection throughout stroke.
10. The operating temperature is to be:
 - a. 122 °F (50 °C) For chilled water applications
 - b. 113 °F (45 °C) ambient at 281 °F (138 °C) fluid temperature
 - c. 107 °F (42 °C) ambient at 300 °F (149 °C) fluid temperature
 - d. 100 °F (38 °C) ambient at 340 °F (171 °C) fluid temperature
11. 90 °F (32 °C) ambient at 366 °F (186 °C) fluid temperature

N. 2½”...6” Cast Iron Flanged Globe Valve Actuators 220 lbs. force.

1. Actuators must have Two- Position for a SPST controller, Floating for a SPST controller, and Proportional models will a controller input signal of either a 0...10 Vdc, 2...10 Vdc, 4...20 mAdc, or 6...9 Vdc. Control function direct/reverse action is jumper selectable.
2. Actuator is to be spring return.
3. Actuator will have 220 lb. force (979 newton) with ½” (13 mm) or 1” (25 mm) nominal linear stroke.
4. Feedback on proportional model with 2...10 Vdc (max. 0.5 mA) output signal or to operate up to four like additional slave actuators.
5. Actuator must automatically set input span to match valve travel.
6. Actuator Operating temperature 0...140 °F (-18...60 °C) up to a maximum valve fluid temperature of 300 °F (149 °C).
7. Actuator is to have a 24 Vac power supply on Two-position and Proportional models and 120 Vac on Two-position models.
8. Actuator housings rated for up to NEMA 2/IP54.
9. Actuator must have manual override to allow positioning of valve and preload.
10. Actuator is to mount directly to vales without separate linkage.
11. Actuator agency Listings: UL 873, CUL: UL.

O. 2½”...6” Cast Iron Flanged Globe Valve Actuators with Linkage SR.

1. Actuators with 60, 133, or 150 lb.-in of force depending on model.
2. Actuator housings rated for up to NEMA 2/ IP54 with a 150 lb.-in. rated a NEMA 4.
3. Actuators are to be spring return.
4. Actuators are to have Two-position, Floating and Proportional models.
5. Actuators must have overload protection throughout rotation.
6. Actuator have an optional built-in auxiliary switch to provide for interfacing or signaling on selected models.
7. Actuator agency listings: UL-873, C22-2 No.24-83, CUL.

P. Pneumatic Globe Valve Actuators

[Schneider Electric MK Series die-cast aluminum housing actuators]

1. Manufactured, brand labeled or distributed by Schneider Electric.
2. Pneumatic actuators must have field replaceable neoprene diaphragms.
3. All actuators shall be Spring Return (SR) with the spring retracting actuator shaft and raising the valve stem on loss of are pressure.
4. Actuators must have an operating temperature of -20...220 °F (-29...104 °C)
5. Actuators shall be models with 6 sq. in. 11, 50 and 100 sq. in effective area for the psi to push against.
6. Actuators may not “spark” under normal conditions.
7. Actuators must except an optional positive pilot positioning relay.
8. Actuators will have a maximum air pressure of 30 psig.
9. Actuators must have models with spring ranges for typical HVAC applications.

Q. Pneumatic Damper Actuators

[Schneider Electric MK-0000 die-cast aluminum housing actuators]

1. Manufactured, brand labeled or distributed by Schneider Electric.
2. Pneumatic actuators must have field replaceable neoprene diaphragms.
3. All actuators shall be Spring Return (SR) with the spring retracting actuator shaft on loss of are pressure.
4. Actuators must have an operating temperature of -20...160 °F (-29...71 °C)
5. Actuators shall be models with 8 sq. in. 11, 20 and 40 sq. in. (dual mounted) effective area for the psi to push against.
6. Actuators may not “spark” under normal conditions.
7. Actuators must except an optional positive pilot positioning relay. Relay is to be standard on 20 sq. in. models.
8. Actuators will have a maximum air pressure of 30 psig.
9. Actuators must have models with spring ranges for typical HVAC applications.

2.16 CONTROL VALVES

A. Zone Valves, Two-Position, Control Valves

[Schneider Electric Erie zone valves]

1. Manufactured, brand labeled or distributed by Schneider Electric
2. Valve application are for hot and chilled water models, up to 50% glycol. Steam models up to 15 psi
3. Valve seat leakage is to ANSI class IV (0.01%) with pressure at inlet (B-port/A-port, if 3-way).
4. Valves are to be: Body 300 psi rated forged brass, Stem-nickel plated, Seat-brass, Paddle-Buna N or highly saturated nitrile.
5. Valves are to be 2-way or 3-way with connections options of NPT (threaded female), Sweat (SW), Inverted flare (IFL), Society Automotive Engineers male (SAE) Rp Metric threaded female, depending on models, with end switch option on general temperature models.
6. Actuators are to be Spring Return (SR) normally open (NO) and normally closed (NC) models. Actuators are to have “High Close-off” models.
7. Valve line sizes are ¾”, ½”, ¾”, 1”, and 1¼” depending on model.
8. Valve CVs are to from 1 to 8 depending on model.
9. Actuators are to be UL listed

Bronze ½”...2” Globe Control Valves

[Schneider Electric Venta VB-7000 valves]

1. Control Valves: Factory fabricated, with body material, and pressure class based on maximum pressure and temperature rating of piping system with a body rating of not less than 400 psig at 150 °F, 321 psig at 281 °F per ANSI B16.15.
2. Valve Manufacturer: Must have at least 25 years of valve manufacturing and must meet the provisions of Section 1605 of the American Recovery and Reinvestment Act Buy American Requirements. Manufacturer shall water test all valves prior to shipment.
3. Valves two way NPS 2” and Smaller: Operator, stem and plug assembly, and spring-loaded PTFE/EPDM valve stem packing cartridge must be removable for future replacement to restore the valves back to their original condition. Material grade properties must meet the fluid temperature and pressure requirements:
 - a. Standard duty bronze body, 316 stainless steel vertical stem, brass plug, soft seal, and bronze seat, renewable packing cartridge, and screwed/sweat/flared ends. Valves shall have allowable media temperature of 20 °F ...281 °F to assure reliability with dual temperature applications.
 - b. Heavy duty bronze body, 316 stainless steel vertical stem, 316 stainless steel plug, soft seal, and 316 stainless steel seat, renewable packing cartridge, and screwed ends. Valves shall have allowable media temperature of 20 °F ...340 °F to assure to assure reliability with dual temperature applications.
 - c. High temperature bronze body, 316 stainless steel vertical stem, 316 stainless steel plug, and 316 stainless steel seat, renewable packing cartridge, and screwed ends. Valves shall have allowable media temperature of 20 °F ...400 °F.
4. 2-way fluid system globe valves shall have the following characteristics:
 - a. Rangeability: Greater than 100:1 for all valves with flow coefficients of 0.4 and higher to provide stable control under light load conditions.
 - b. Maximum Allowable Seat Leakage: Standard and heavy duty valves must be designed to meet ANSI Class V (0.0005 ml per minute per “of orifice diameter per psi differential) up to 35 psi close off differential pressure and ANSI Class IV seat leakage (maximum 0.01% of full open valve capacity) above 35 psi with appropriate actuator. High temperature valves must meet ANSI Class III seat leakage (maximum 0.1% of full open valve capacity).
 - c. The valve must be able to operate with a full-open operating differential of no less than 87 psi.
 - d. Flow Characteristics: Modified equal percentage characteristics for standard duty water applications and modified linear for heavy duty and high temperature steam applications with gradual opening for light loads.
 - e. Sizing:
 - a. Two Position Water: Line size or size using a differential pressure of 1 psi.
 - b. Modulating Water: 5 PSI or twice the load pressure drop.
 - c. Pressure drop across steam valve at a maximum flow of 80 percent of inlet pressure up to 15 psig and 42% of absolute (gage pressure + 14.7) inlet pressure above 15 psig inlet.
 - d. 100 psi saturated steam maximum inlet pressure for heavy duty bronze body globe valves ½”...2”.
 - e. 150 psi saturated steam maximum inlet pressure for high temperature bronze body globe valves ½”...2”.
 - f. 35 psi saturated steam maximum inlet pressure for standard duty bronze body globe valves ½”...2”.
5. Valves 3-Way mixing (two inlets and one outlet) NPS 2” and Smaller:
 - a. Operator, stem and plug assembly, and spring-loaded PTFE/EPDM valve stem packing cartridge must be removable for future replacement to restore the valves back to their original condition. Material grade properties must meet the fluid temperature and pressure requirements:
 - a. Standard duty bronze body, 316 stainless steel vertical stem, brass plug, and bronze seat, renewable packing cartridge, and screwed or sweat ends. Valves shall have allowable media temperature of 20 °F...281 °F to assure reliability with dual temperature applications.
 - b. Heavy duty bronze body, 316 stainless steel vertical stem, 316 stainless steel plug, and 316 stainless steel seat, renewable disc and packing cartridge, and screwed

ends. Valves shall have allowable media temperature of 20 °F ...340 °F to assure reliability with dual temperature applications.

6. 3-Way mixing hydronic system globe valves shall have the following characteristics:
 - a. Rangeability: Greater than 100:1 for all valves to provide stable
 - b. Maximum Allowable Seat Leakage: A port must be designed to meet ANSI Class V (0.0005 ml per minute per "of orifice diameter per psi differential) up to 35 psi close off differential pressure and ANSI IV seat leakage (maximum 0.01% of full open valve capacity) above 35 psi with appropriate actuator. B port must meet ANSI Class III seat leakage (maximum 0.1% of full open valve capacity).
 - c. The valve must be able to operate with a full-open operating differential of 87 psi.
 - d. Flow Characteristics: Modified linear characteristics with gradual opening for light loads.
 - e. Sizing: Modulating Water: Minimum 5 psi or at least equal to the load pressure drop.
7. Valves 3-Way diverting (one inlet and two outlets) NPS 2" and Smaller:
 - a. Operator, stem and plug assembly, and spring-loaded PTFE/EPDM valve stem packing cartridge must be removable for future replacement to restore the valves back to their original condition. Valves must be designed specifically for diverting service, and mixing valves designed for mixing service must not be used for diverting applications. Material grade properties must meet the fluid temperature and pressure requirements: Standard duty bronze body, 316 stainless steel vertical stem, brass plug, and bronze seat, renewable disc and packing cartridge, and screwed ends. Valves shall have allowable media temperature of 20 °F ...281 °F to assure reliability with dual temperature applications.
8. 3-Way diverting hydronic system globe valves shall have the following characteristics:
 - a. Rangeability: Greater than 100:1 for all valves to provide stable control under light load conditions.
 - b. Maximum Allowable Seat Leakage: ANSI Class III seat leakage (maximum 0.1% of full open valve capacity).
 - c. Maximum Allowable Pressure Differential: 35 psi in an open position.
 - d. Flow Characteristics: Modified linear characteristics with gradual opening for light loads.
 - e. Sizing:
 - a. Modulating Water: Minimum 5 psi or at least equal to the load pressure drop.
9. Required Certifications:
 - a. Pressure Equipment Directive (PED 97/23/EC), RoHS (Restriction of Hazardous Substances) and REACH (Regulation, Evaluation, Authorization, and Restriction of Chemicals), Canadian Registration Number.
10. Valve and Operator:
 - a. To assure maximum performance and operation of the valve assembly both the valve and the actuator must be tested and approved by the valve manufacturer to assure compatibility of all components and performance to the specifications.

2"...6" Cast Iron Flanged Valves

[Schneider Electric VB-8000 and VB-9000 valves]

1. Bodies
 - a. Shall be American Factory fabricated with ASTM A 126 Class B cast iron body material with the pressure class within the maximum pressure and temperature rating of the piping system. (125 body rating with not less than 200 psig at 150 °F, decreasing to 169 psig at 281F per ANSA B16.1)
2. Manufacturer
 - a. Shall have at least 25 years of valve manufacturing and meet the provisions of Section 1605 of the American Recovery and Reinvestment Act, buy American, requirements. All valves shall be water tested by manufacturer prior to shipment.
3. Serviceability
 - a. 2-Way valve operators, stem and plug assemblies and spring-loaded PTFE/EPDM valve stem packing cartridges must be removable for future replacement to restore the valves back to their original condition.
4. Construction
 - a. Material grades must meet the fluid temperature and pressure requirement temperatures of 20 °F ...281 °F to assure reliability throughout all application temperature ranges.

5. Packings
 - a. Shall be cartridges suitable for replacement as units withstanding the full operating temperature ranges, including daily and seasonal fluctuations of water, 60% glycol and steam fluids.
6. Characteristics
 - a. Rangeability: Two way, 100:1 and greater for stable control under light load.
 - b. Shutoff, 2-Way: Leakage allowed: ANSI Class IV (0.01% of max flow)
 - c. 3-Way: Leakage allowed: ANSI Class III (0.1% of max flow)
 - d. Flow curves: 2-Way modified equal percentage characteristic.
 - e. Mixing and Diverting: Linear, modified with gradual opening for light loads.
7. Piping
 - a. Diverting valves, with the common port at the bottom can be used for mixing.
 - b. Mixing valves with the common port at the end must not be used for diverting applications.
8. Sizing
 - a. Two Position Water: Line size or size using a differential pressure of 1 psi.
 - b. Modulating Water: 5 PSI or twice the load pressure drop
 - c. Steam, 2-Way: maximum pressure drop across the valve at a maximum flow of 80 percent of inlet pressure up to 15 psig. Above 15 psig inlet, 42% of absolute (gage pressure + 14.7) inlet pressure.
9. Certifications for All Models
 - a. Pressure Equipment Directive (PED 97/23/EC), RoHS (Restriction of Hazardous Substances) and REACH (Regulation, Evaluation, Authorization, and Restriction of Chemicals)

D. Steam Control Valves

1. ½" ...2" Steam Service Designed Globe Valves
 - a. Body material, and pressure class based on maximum pressure and temperature rating of piping system with a body rating of not less than 400 psig at 150 °F, 321 psig at 281 °F per ANSI B16.15.
 - b. High temperature spring-loaded PTFE/EPDM valve stem packing cartridge must be removable for future replacement to restore the valves back to their original condition. Material grade properties must meet the fluid temperature and pressure requirements:
 - a. Standard duty bronze body, 316 stainless steel vertical stem, brass plug, soft seal, and bronze seat, renewable packing cartridge, and screwed/sweat/flared ends. Valves shall have allowable media temperature of 20 °F ...281 °F to assure reliability with dual temperature applications.
 - b. Heavy duty bronze body, 316 stainless steel vertical stem, 316 stainless steel plug, soft seal, and 316 stainless steel seat, renewable packing cartridge, and screwed ends. Valves shall have allowable media temperature of 20 °F ...340 °F to assure to assure reliability with dual temperature applications.
 - c. High temperature bronze body, 316 stainless steel vertical stem, 316 stainless steel plug, and 316 stainless steel seat, renewable packing cartridge, and screwed ends. Valves shall have allowable media temperature of 20 °F ...400 °F.
 - c. Two-way fluid system globe valves shall have the following characteristics:
 - a. Rangeability: Greater than 100:1 for all valves with flow coefficients of 0.4 and higher to provide stable control under light load conditions.

 - d. Flow Characteristics: Modified equal percentage characteristics for standard duty water applications and modified linear for heavy duty and high temperature steam applications with gradual opening for light loads.
 - e. Sizing:
 - a. Pressure drop across steam valve at a maximum flow of 80 percent of inlet pressure up to 15 psig and 42% of absolute (gage pressure + 14.7) inlet pres-

- sure above 15 psig inlet.
- b. 100 psi saturated steam maximum inlet pressure for heavy duty bronze body globe valves ½”...2”.
- c. 150 psi saturated steam maximum inlet pressure for high temperature bronze body globe valves ½”...2”.
- d. 35 psi saturated steam maximum inlet pressure for standard duty bronze body globe valves ½”...2”.
- f. Certifications for All Models: Pressure Equipment Directive (PED 97/23/EC), RoHS (Restriction of Hazardous Substances) and REACH (Regulation, Evaluation, Authorization, and Restriction of Chemicals)

2. 2½”...6” Steam Service Designed Globe Valves
 - a. Bodies: Shall be American Factory fabricated with ASTM A 126 Class B cast iron body material with the pressure class within the maximum pressure and temperature rating of the piping system. (125 body rating with not less than 200 psig at 150 °F, decreasing to 169 psig at 281F per ANSA B16.1)

 - b. Shutoff, 2-Way: Leakage allowed: ANSI Class IV (0.01% of max flow)
 - c. Flow curves: 2-Way modified equal percentage characteristic.
 - d. Sizing
 - a. Steam, 2-Way: maximum pressure drop across the valve at a maximum flow of 80 percent of inlet pressure up to 15 psig. Above 15 psig inlet, 42% of absolute (gage pressure + 14.7) inlet pressure.
 - b. Certifications for All Models: Pressure Equipment Directive (PED 97/23/EC), RoHS (Restriction of Hazardous Substances) and REACH (Regulation, Evaluation, Authorization, and Restriction of Chemicals)

E. ½”...¾” Ball Valve

[Schneider Electric VBB/VBS Ball Valves]

1. Manufactured, brand labeled or distributed by Schneider Electric.
2. ½” and ¾” Ball Valves: Forged brass body rated at no less than 600 psi, chrome plated brass ball with blowout proof stem or optional stainless steel ball with blowout proof stem,
3. Valves are to be in 2-way and 3-way configurations.
4. Connection: Female NPT end fittings, Teflon® PTFE seat, characterizing disc glass-filled PEEK providing equal percentage flow curve on 2-way valve.
5. Operating Temperature 20...250 °F chilled or hot water with up to 60% glycol solution.
6. 2-way and Bypass port should be ANSI Class IV (0.01% of Cv) seat leakage.
7. Rangeability must be at least 300:1.
8. Tool-less actuator connection.
9. System Static Pressure Limit should be 600 psig (4137 Pa)
10. The manufacturer shall warrant all components for a period of 2 years from the date of production.

F. 2-way (½”...3”) and 3-way (½”...2”) Ball Valves

[Schneider Electric VB-2000 series]

1. Manufactured, brand labeled or distributed by Schneider Electric.
2. Valves must be for control of hot or chilled water, or solutions of up to 50% glycol.
3. Ball valves must have close-offs of 40...130 psi depending on size.
4. Valves will provide Cvs from 0.33...266 depending on size.
5. Valve characterizing insert, is to made of glass-filled Noryl™ and provide equal percentage flow.
6. Valve body is to made of forged brass ASTM B283-06 and rated for static pressure of 360 psi at fluid temperatures of 20...250 °F (-7...121 °C).
7. All valves are to have balls made of nickel/chromium plated brass with 2-way valves having stainless steel balls as an option. All valve stems are to be stainless steel with reinforce Teflon® EPDM O-ring seals.
8. 2-way valves are to be ANSI Class IV (0.01% of Cv) shutoff. 3-way valves are to be ANSI Class IV (0.01% of Cv piped coil-side outlet to the port A only).
9. Fluid (water) temperature are a minimum 20 °F (-7 °C) and a maximum of 250 °F (121 °C).
10. Valves will have a two warranty.

G. Pressure Independent Balancing Control Valves ½”...10”

[Schneider Electric SmartX PIBCV]

When selecting pressure independent valves the specifier should also revise section 232113 to NOT include balancing valves and also modify section 230593 to NOT require the individual balancing of each coil/valve combination.

1. Manufactured, brand labeled or distributed by Schneider Electric.
2. NPS 2 and Smaller: PN 16, stainless steel components.
3. NPS 2½ through 10: Class 125 cast iron body per ASME B16.1-2010, Material class B per ASTM A 126-04 (2014), stainless steel components.
4. Accuracy NPS ¾” and Smaller: The control valves shall accurately control the flow from 0...100% rated flow with a differential pressure range of 2.32...58 psi for low and standard flow units, 5...58 psi for high flow units within 5% of set flow value.
5. Accuracy NPS 1 through 1¼: The control valves shall accurately control the flow from 0...100% rated flow with a differential pressure range of 2.9...58 psi for standard flow units, 5...58 psi for high flow units within 5% of set flow value.
6. Accuracy NPS 1½ through 4: The control valves shall accurately control the flow from 0...100% rated flow with a differential pressure range of 4.35...58 psi for standard flow units, 8.7 psi to 58 psi for high flow units within 5% of set flow value.
7. Accuracy NPS 5 through 10: The control valves shall accurately control the flow from 0...100% rated flow with a differential pressure range of 5.8...58 psi for standard flow units, 8.7...58 psi for high flow units within 5% of set flow value.
8. Flow Characteristics: Linear Control, selectable to equal percentage at the proportional valve actuator.
9. Field adjustable flow by means of a percentage of rated valve flow.
10. Position feedback output signal integrated into all proportional actuators.
11. 100% authority with modulating below 1% regardless of flow settings.
12. No cartridges requiring replacement or maintenance.
13. Close off ratings shall be 232 psi for all valve sizes.

H. Butterfly Valves

1. Manufactured, brand labeled or distributed by Schneider Electric.
2. Valve body are to be polyester coated iron ASTM A126 lug mating with ANSI class 125/150 flanges.
3. Disc Type: Ductile iron nylon 11 coated.
4. Valve Stem:
 - a. 2...8" 416 stainless steel double D stem.
 - b. 10...12" 316 stainless steel double D stem.
 - c. 14" and larger: stainless steel round shaft woodruff key slot.
5. Valve Seat:
 - a. EPDM tongue and groove seat and molded O-ring flange seat
6. Flow Characteristics: Modified equal percentage.
7. Close-Off Pressure Rating: Bubble-tight shutoff (no leakage).
8. Valve Fluid Temperature Rating: -40...250 °F (-40...121 °C)
9. Valve will have two (2) inch extended neck (because of heat).
10. Valve must accept pneumatic or electric/electronic actuators
11. Valves must have a minimum of a two (2) year warranty.

I. High Performance Butterfly Valves

1. Manufactured, brand labeled or distributed by Schneider Electric.
2. Valve body are to be carbon steel with ANSI class 150 flanges
3. Disc Type: 316 stainless steel
 - a. Valve Stem: 17-4PH stainless steel
 - b. One-piece design
 - c. Blow out proof design
4. Valve Seat:
 - a. Resilient energizer totally encapsulated by the PTFE seat
 - b. Seat assembly locked in the body recess by full-faced seat retainer
 - c. Self adjusting for temperature changes and wear
5. Flow Characteristics: Modified equal percentage
6. Close-Off Pressure Rating: Bubble-tight shutoff (no leakage) at rated maximum differential pressure
7. Valve Fluid Temperature Rating:
 - a. -40...500 °F (-40...250 °C)
 - b. On/Off steam application max.150 psi pressure
 - c. Proportional steam application max. 50 psi pressure
8. Valve will have extended neck (because of heat)
9. Valve must accept pneumatic or electric/electronic actuators
10. Valve must have a minimum two (2) year warranty
