Universal Controllers

Energy &
Atmosphere

RWD68U Universal Controller.

Description

The RWD family of Universal Controllers are intended for heating, air conditioning, ventilation and refrigeration in HVAC control applications.

Features

- Stand-alone electronic temperature controller with P or P+I response (RWD62U/68U)
- 24 Vac operating voltage
- Control application selectable via Application Number
- Active (0 to 10 Vdc) input scale can be selectable
- Limit and direction of the output scale can be freely assigned (RWD62U/68U)
- Two universal inputs for Siemens 1000 Ohm nickel (Ni 1000), 1000 Ohm platinum (Pt 1000) temperature sensors and 0 Vdc to 10 Vdc signals
- Unit can be set as °F, °C, % or no specified unit
- Two modulating 0 to 10 Vdc signal outputs, direct or reverse action (RWD62U/68U)
- One digital input for day/night changeover
- Entering or changing of all data via operating buttons on the controller, possible without additional tools
- PC connection for downloading canned applications and adjusting parameters via the software tool
- One floating output or two two-position outputs, normally open or normally closed (RWD82U)

Applications

RWD62U/68U/82U main loop control applications are designed for temperature, static pressure, humidity, air pressure, fluid pressure, refrigeration, air quality and air fluid velocity control. The controller contains pre-programmed applications.

Auxiliary control functions include:

- Day/night setpoints
- Remote setpoint control
- Limiter control
- Cascade control
- Maximum priority
- Setpoint reset
- Summer/Winter operation

Control parameters are adjusted for maximum comfort control via three buttons on the face of the device, or with a laptop computer and Siemens Building Technologies program software.

RWD Universal Controllers Specifications

General

Temperature Controllers for Refrigeration and Heat Pumps

LISTED

RWD44U Temperature Controller.

Description

The RWD Family of Temperature Controllers are standalone, electronic, programmable controllers with pre-configured temperature control applications. The Temperature Controllers are intended for heating, ventilating, and air conditioning systems, including one, two or three-stage compressors, heat pumps or single or dual stage heating and/or cooling equipment. The 24 Vac operating voltage controller switches four on/off outputs and has two universal inputs for Siemens Nickel 1000, Platinum 1000 or active 0 to 10 Vdc signals.

Features

- Standalone electronic controller with pre-configured applications
- Two or three universal inputs for Ni1000, Pt1000 or active 0 to 10 Vdc sensors
- Four 2-position (On/Off) outputs and one modulating 0 to 10 Vdc output (RWD45)
- Modulating 0 to 10 Vdc for economizer or second independent control loop (RWD45)
- Suitable for 1, 2, or 3-stage compressors
- Adjustable compressor delay times
- Keypad is used to enter or change data – no need for tools
- Download pre-programmed applications via software tool using PC connection

Applications

The RWD45U Controller is intended for HVAC systems, including heat pumps:

- Single, dual or triple compressor heat pump units
- Single or dual stage heating and cooling equipment
- Single or dual stage cooling equipment
- Single or dual stage heating equipment
- Equipment with 0 to 10 Vdc input

Universal input X2 is used for the following auxiliary functions:

- On/Off (standby)
- Remote setpoint
- Alarm
- Filter alarm
- Setpoint compensation
- Sensor averaging
- Summer/Winter setpoint changeover
- Sensor selection

Universal input X3 is used (RWD45U) for the following functions:

- Economizer sensor
- Sensor for second, independent control loop

Time Clock

Energy &
Atmosphere

Time Clock for RWD Temperature Controllers.

Description

The digital Time Clock is used to switch an HVAC system on and off, or for the control of setback periods at night and weekends.

Features

- Integrated countdown timer for after-programmed-hours operation
- Countdown timer only option
- Suitable for mounting on DIN rails
- Simple programming with large, clear LCD screen
- Manual on/off control
- Quick Daylight Savings time (DS) adjustment
- Power reserve of 72 hours

Function

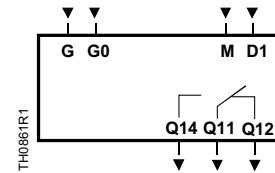

The microprocessor automatically stores the programmed times in chronological order. The time clock operates in one of four modes:

- Manual, continuously On
- Manual, continuously Off
- Adjustable Countdown Timer On
- Automatically via the time program

A momentary contact close switch across M and D1 activates the Countdown Timer. The power supply is buffered by a memory back-up capacitor. In the event of a power failure, the clock will continue to run, with the program retained, for 72 hours. However, the output will go to (or remain in) the normal position.

Transformer

Description

The SEM62.2U Transformer reduces voltage from 120 Vac to 24 Vac.

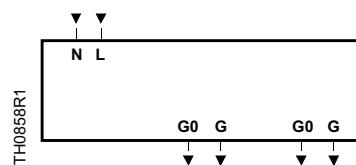

Features

- Output power 30 VA
- Suitable for mounting on DIN rails
- Secondary power supply indication via LED
- Integral self-resetting primary fuse
- Secondary power supply on/off switch with replaceable fuse

Applications

This power Transformer (with housing) reduces a 120 Vac supply voltage to the 24 Vac supply voltage required by controllers. The transformer has output power ratings of 30 VA, and an integral self-resetting fuse on the primary side that protects the transformer from overheating. It includes an on/off switch with replaceable fuse, which eliminates the need for additional 24V circuit on/off switch and fuse (or circuit breaker).

Wiring Diagram

Transformer

N, L 120 Vac input
G, G0 24 Vac output

Note: Total transformer output power is 24 VA. Two sets of G0 and G terminals are provided to enable easier wiring.

Signal Converter

SEZ220 Signal Converter.

Applications

The signal converter is for use in HVAC plants to:

- Provide minimum / maximum selection or averaging of up to 5 passive or active input signals
- Calculate enthalpy, enthalpy differentials, absolute humidity or dew points from passive temperature and active humidity signals
- Convert 1 passive input signal into 2 active signals
- Double signals for the sequential control of pumps, valves and fans

Features

- Preprogrammed standard applications
- Freely programmable
- Menu-driven operation
- Spring cage wire terminals
- 13 pre-configured applications already programmed
- DIN rail back mount
- Front panel mount option

Function Modes

- Minimum / maximum / average (MIN-MAX-AVR)
 - Selection of maximum input signal from the inputs
 - Selection of minimum input signal from the inputs
 - Calculation of average value of the inputs
 - For calculating the average value, input can be weighted. This means the number of input signals can be increased several times over
- If, in addition, configuration parameter SPLIT is activated, the functions will be assigned to the inputs X1 – X2 and X3 – X5. This means, e.g.:
 - Selection of maximum input signal from the inputs X1 – X2
 - Selection of maximum input signal from the inputs X3 – X5
 - Selection of minimum input signal from the inputs X1 – X2
 - Selection of minimum input signal from the inputs X3 – X5
 - Calculation of average value of the inputs X1 – X2
 - Calculation of average value of the inputs X3 – X5
- Enthalpy processor (ENTHALPY)
 - Calculation of enthalpy from 1 passive temperature signal and 1 active humidity signal
 - Calculation of absolute humidity from 1 passive temperature signal and 1 active humidity signal
 - Calculation of enthalpy differential from 2 signal groups each delivering 1 passive temperature signal and 1 active humidity signal
 - Calculation of dew point temperature from 1 passive temperature signal and 1 active humidity signal
- Signal doubling / signal inversion (2X-INV)
 - Signal doubling for the sequential control of pumps, valves and fans
 - Signal conversion from 1 passive temperature signal into 2 active temperature signals

The functions can be combined as required by the application.

195 Single Input Receiver-Controller.

Description

The 195 Single Input Receiver-Controller is a pneumatic controller which receives one pneumatic input, and produces a pneumatic output signal based on the net pneumatic input and the mechanical settings of the setpoint and percent proportional band. This controller can be easily changed from direct to reverse acting.

Retroline Receiver-Controller (195-1000) includes decals and installation instructions to replace competitive models.

Features

- Rugged proven design
- Plug-in air connections for ease of installation, calibration, and service
- Internal restrictors for transmitter inputs
- Stick-on scales included for setpoint dial in standard transmitter ranges
- Large, easy-to-read scales on all adjustments
- Calibration card for converting transmitter range to 3 to 15 psi (21 to 103 kPa) signal
- Tamper-resistant cover

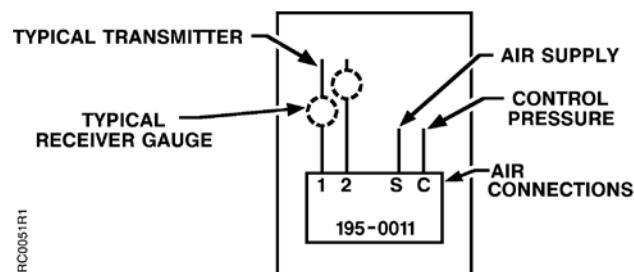

Options

- Retroline products for replacing competitive products
- Pressure Gauge (order separately, see page C-40)

Applications

The 195 Single Input Receiver-Controller is a one-input, direct/reverse acting instrument used to control temperatures, humidity, and pressure of mechanical equipment in commercial and industrial facilities.

Typical Connections

RC0051R1

195 Specifications

Action	
Input #1	Direct
Input #2	Reverse
Pneumatic Inputs	3 to 15 psi (21 to 103 kPa)
Control Output	0 psi (0 kPa) to supply pressure 22 psi (152 kPa)
Operating Ambient Temperature Range	40 to 120°F (4 to 49°C)
Supply Pressure	
Operating.....	22 psi (152 kPa)
Maximum Safe	30 psi (207 kPa)
% Proportional Band Adjustment Range	2 to 20% for a 5 psi (34 kPa) control pressure change
Air Consumption	60 scim (17 ml/s), <i>not including transmitters</i>

Air Capacity	2 psi (14 kPa) Pressure Change at 9 psi (62 kPa) control pressure
Supply	640 scim (175 ml/s)
Exhaust	590 scim (161 ml/s)
Mounting	Surface
Air Connections	
Barb fittings for 1/4" (6 mm) OD polyethylene tubing. Two plug-in connectors are provided; one for the direct acting and the reverse acting transmitter inputs and one for supply and control lines. 1/8" NPT connection provided for control pressure gauge (gauge not included).	
Case Material	Lexan, 20% glass-filled
Dimensions	6.75" W x 5.69" H x 3.5" D (171 mm W x 144 mm H x 89 mm D)
Shipping Weight	3.1 lb. (1.4 kg)

195 Multiple Input Receiver-Controller
with Control Pressure Gauge.

Description

The 195 Multiple Input Receiver-Controller is a pneumatic controller that receives up to three pneumatic inputs and produces a pneumatic output signal based on the net pneumatic input and the setpoint, percent proportional band, and authority settings. The Controller can be easily changed from direct to reverse acting.

Retroline Receiver-Controller (195-1000) includes decals and installation instructions to replace competitive models.

Features

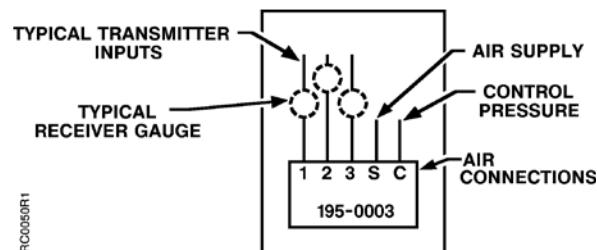

- Rugged proven design
- Plug-in air connections for ease of installation, calibration, and service
- Internal restrictors for transmitter inputs
- Stick-on scales included for setpoint dial in standard transmitter ranges
- Large, easy-to-read scales on all adjustments
- Calibration card for converting transmitter range to 3 to 15 psi (21 to 103 kPa) signal
- 0 to 30 psi (0 to 200 kPa) Pressure Gauge
- Retroline products for replacing competitive products

Applications

The 195 Multiple Input Receiver-Controller is commonly used when the setpoint needs to be automatically reset based on a separate input; can also be used as a single input device.

Example: Change hot water supply temperature setpoint based on outside air temperature.

Temperature
Transmitter.

184-0005 Temperature
Transmitter with
remote bulb.

184 Temperature
Transmitter with
averaging bulb.

184 Temperature
Transmitter with
rigid bulb.

Description

The 184 Temperature Transmitters are direct acting, one-pipe instruments that sense temperature and transmit a proportional 3 to 15 psi (21 to 103 kPa) pneumatic signal to a remotely located receiver gauge and/or receiver controller. Temperature Transmitters operate on the force-balance principle, using internal feedback for excellent linearity and accuracy.

Retroline transmitters easily replace any competitive model. Refer to the appropriate product to locate the Retroline replacement.

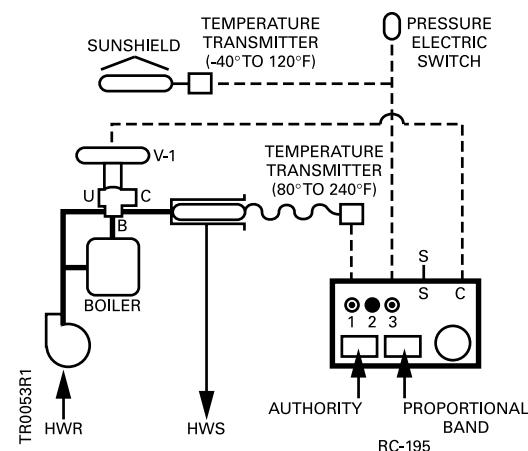

Features

- 1-pipe, direct acting
- Rapid response to temperature changes over their full range
- Available in a variety of sensing elements and temperature ranges
- Available with rigid bulb, remote averaging bulb, and room transmitter
- Internal feedback for excellent linearity and accuracy

Applications

The 184 Temperature Transmitters can be used for a variety of applications to monitor temperature and are ideal for those requiring indication with a receiver-controller.

Application Drawing

Room and Duct Humidity Transmitters

186-0043 Room Humidity Transmitter.

186-0089 Duct Humidity Transmitter.

Description

The 186 Room and Duct Transmitters are one-pipe, direct acting pneumatic instruments that sense space humidity and transmit a 3 to 15 psi (21 to 103 kPa) pneumatic signal to a remote receiver gauge and/or receiver-controller to read percent relative humidity.

Features

- Inorganic sensing element for rapid response to humidity changes
- Bimetal temperature compensation minimizes temperature effects
- Cover included with Room Transmitter
- Available for room mounting (vertical) and duct mounting that is at least 6-inches (152 mm) high and 6-1/2-inches (165 mm) deep

Applications

The 186 Room and Duct Humidity Transmitters operate on a force-balance principle with internal feedback to obtain linearity to accurately sense relative humidity.

The transmitter output can be sent to a receiver-controller for control of an air conditioning or process control system.

Recommendation

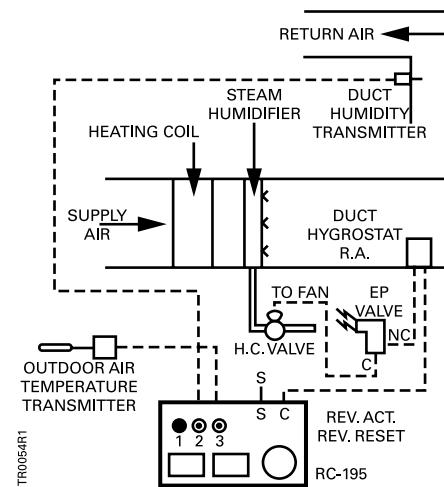

Room: Air velocity must be at least 30 FPM (0.15m/s) and the transmitter should be located where it senses actual *room conditions* (away from doors, equipment, etc.).

Duct: Duct transmitters should be used whenever possible in the return air duct.

Low Differential Pressure Transmitters

141 Low Differential Pressure Transmitter.

Description

The 141 Low Differential Pressure Transmitter is a compact, direct acting, one-pipe device that converts a differential pressure input into a proportional air signal. The input can be either static or velocity pressure differentials of a positive or negative type.

Features

- 1-pipe
- Two input ports (HI and LO)
- One supply pressure port (SIG)
- Rugged construction

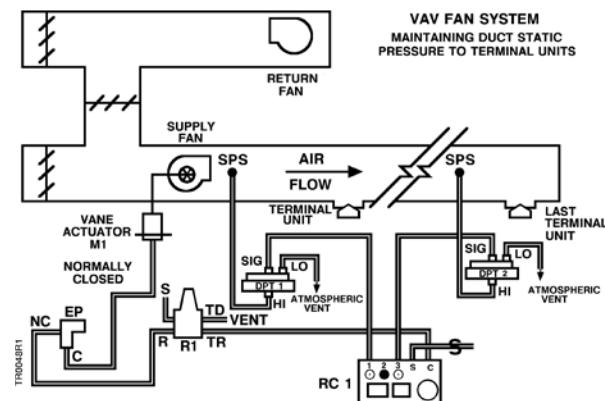

Applications

The 141 Low Differential Pressure Transmitter operates on the force-balance principle and can be used to indicate and/or control static or velocity differential pressures in ducts, across fans, coils, filters, and between any two reference points; can also indicate velocity pressure in duct work. The output signal can be sent to a remotely located, receiver-controller, receiver gauge, and/or sensitive switching pneumatic relay and pressure switch.

Recommendation

Use both of the HI and LO ports for differential pressure applications; either the HI or LO port can be used for static pressure applications.

141 Engineering Diagrams

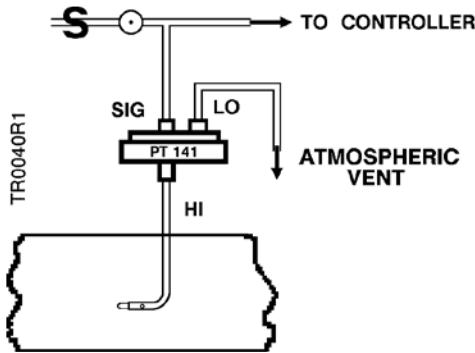

Typical Static Pressure Differential Control

Typical Differential Velocity Pressure Control

Typical Static Pressure Control

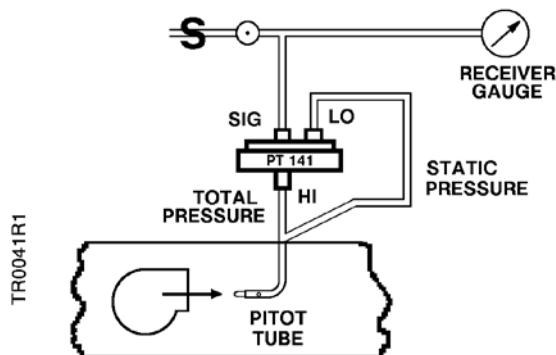

C-29

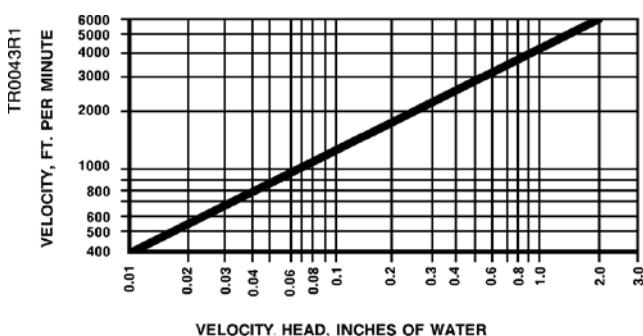

Velocity Pressure Control is recommended when the supply fan does not exceed 25,000 CFM (11,800 l/s) and the turndown ratio (min./max. return fan CFM) does not exceed 0.5 (0.2 l/s).

Example: If the return fan CFM varies from 8,000 to 20,000 CFM (3,776 to 9,440 l/s), the turndown ratio is 0.4 (0.2 l/s). The 141 Velocity Pressure Transmitter, with square root extractor, is recommended for these conditions.

Typical Velocity Pressure¹ Indication

Standard Pitot Tube

$$\text{VELOCITY PRESSURE} = \text{TOTAL PRESSURE} - \text{STATIC PRESSURE}$$

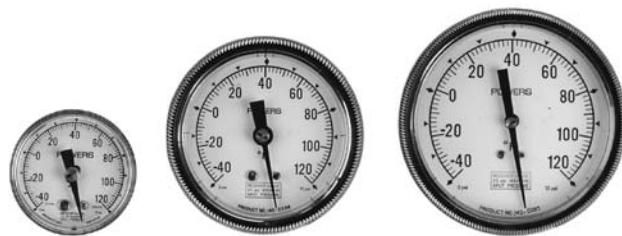

- Allow 10 duct diameters of straight duct before (and 4 duct diameters after) the pitot tube to provide laminar air flow.

This chart illustrates the relationship between velocity and velocity head for standard air.

Request an additional paper Master HVAC Catalog through your Siemens Account Executive or by calling Inside Sales at 1-888-593-7876.

Receiver Gauges

142 Pneumatic Receiver Gauges.

Description

Used for visual indication of the value of a variable required to report system or functional operating status, Receiver Gauges are available as 1-1/2-inch (38 mm), 2-1/2-inch (64 mm), and 3-1/2-inch (89 mm) diameter gauges with a barb fitting for 1/4-inch (6 mm) OD polyethylene tubing.

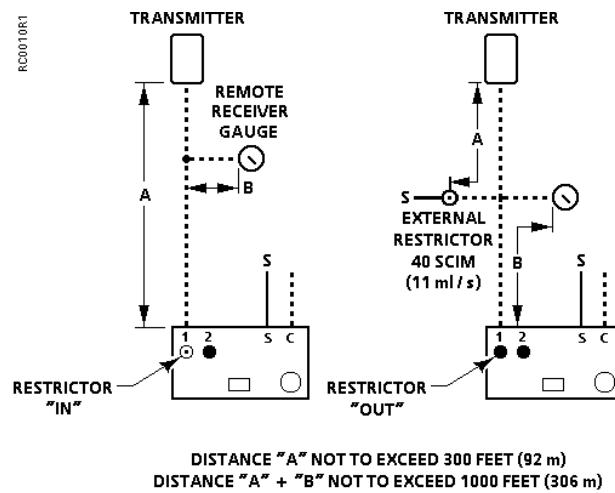

Features

- Easy-to-read dials
- Available in variety of control ranges

Applications

Receiver Gauges are mounted on a central control panel and respond to pneumatic signals from a remotely located transmitter used to measure temperatures, humidity, and pressures of mechanical equipment.

Static Pressure and Liquid Level Regulators

269 Static Pressure and Liquid Level Regulator.

Description

The 269 Static Pressure and Liquid Level Regulator is a direct acting, pneumatic differential controller that measures static or head pressure, and is used to directly control inlet vanes, damper actuators, or similar devices.

Features

- Removable restriction for ease of servicing
- Integral mounting bracket for horizontal mounting
- Adjustable setpoint
- Many models available covering a wide range of pressures

Applications

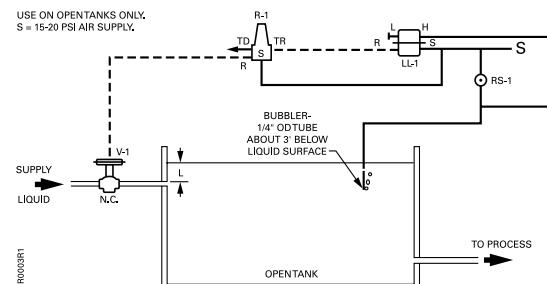

269 Static Pressure Regulator

The 269 Static Pressure Regulator can be used to control velocity, static, or differential pressure to pneumatically control a damper or similar device.

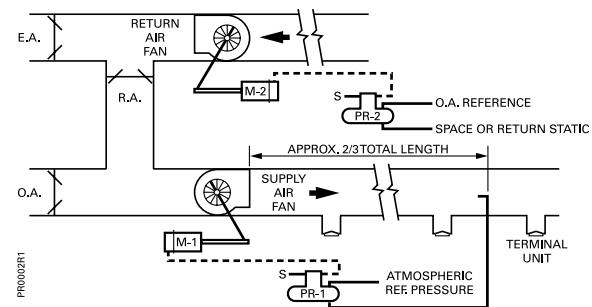

269 Liquid Level Regulator

The 269 Liquid Level Regulator is used to maintain liquid level in an industrial process by pneumatically controlling a valve.

Pneumatic Step Controller

256 Pneumatic Step Controller.

Description

The 256 Pneumatic Step Controller is a pressure-electric device that converts a proportional pneumatic input signal into a series of ten (10) electric ON-OFF contact closures.

Features

- Switches can be easily adjusted in field
- All components mounted on rigid base
- Metal snap-on cover protects electric components
- External pointer indicates shaft position

Applications

A single input type, the 256 Pneumatic Step Controller is used to control electric heating elements. The normally open switch contacts are used to provide fail-safe operation.

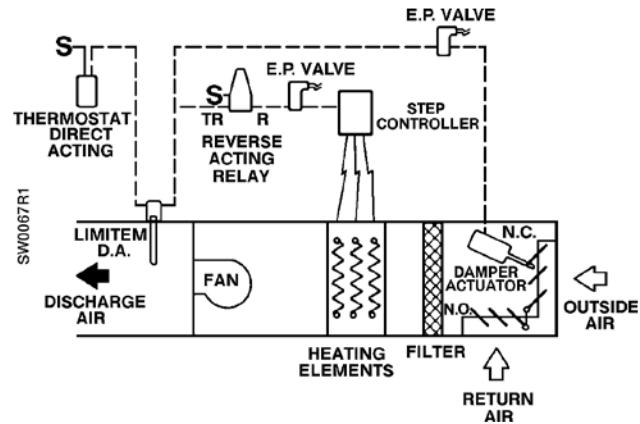

The application drawing shows the unit controlling electric resistance heating elements in unit ventilators. On a decrease in room temperature, the direct acting thermostat closes the outside air damper, opens return air damper and passes air to the step controller which energizes the electric heating coil steps in sequence to raise the fan discharge air temperature. **Note:** A reversing relay is used to reverse the air signal passed from the direct acting thermostat to the step controller. On fan shutdown, an EP valve opens the step switches to prevent overheating.

The Pneumatic Step Controller may also be used in industrial processes requiring sequential control and for sequence control of pumps and refrigeration equipment.

C-35

Controllers & Transmitters

Application Drawing

256 Controller Specifications

Actuator

Effective Diaphragm Area	11 in. ² (71 cm ²)
Normal Air Pressure	0 to 15 psi (0 to 103 kPa)
Maximum Air Pressure	30 psi (207 kPa)
Ambient Temperature	0 to 160°F (-18 to +71°C)
Spring Range (factory setting).....	8 to 13 psi (55 to 90 kPa)
Diaphragm.....	Neoprene

Switches

Differential	Fixed, 5 angular degrees min.
Rating	20 amps. @ 120, 240 & 480 Vac 1 hp at 125 V; 2 hp at 240 V

Switch Settings (closing points)

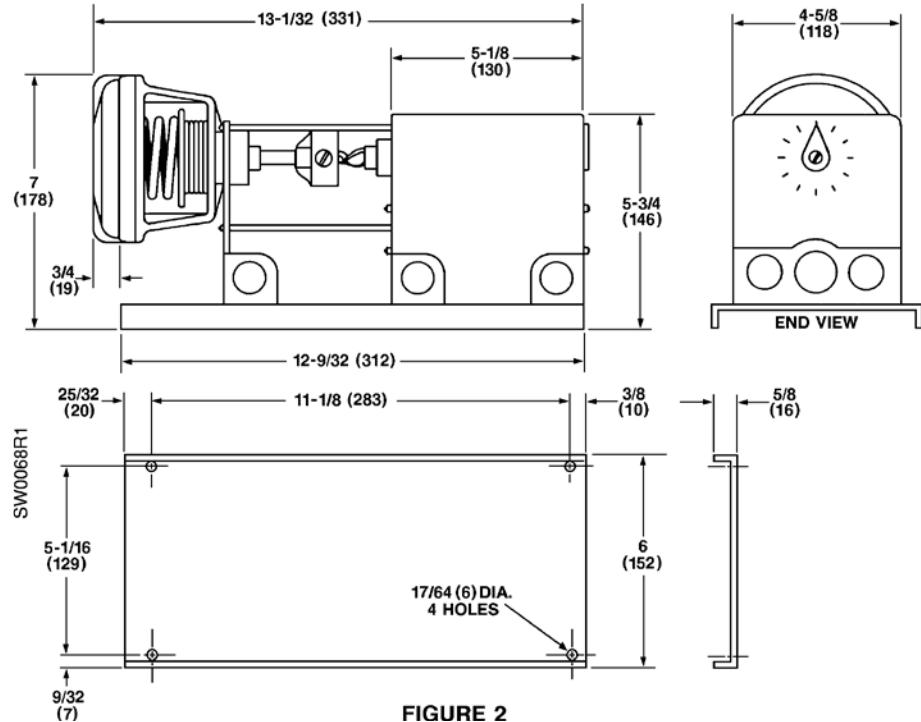

Switch Number	Air Pressure	Pointer Rotation
1	8.0 psi (55 kPa)	25°
2	8.5 psi (58.6 kPa)	39.5°
3	9.0 psi (62 kPa)	54°
4	9.5 psi (65.5 kPa)	68°
5	10 psi (69 kPa)	83°
6	10.5 psi (72.4 kPa)	97°
7	11 psi (76 kPa)	112°
8	11.5 psi (79.3 kPa)	126°
9	12 psi (83 kPa)	140.5°
10	12.5 psi (86.2 kPa)	155°

Switch Action	SPDT
Air Connections	1/8" NPT Female
Conduit Knockouts	Two -1/2" (13 mm); Five -3/4" (20 mm)
Shipping Weight	9.2 lb. (4.2 kg)

256 Controller Product Ordering

Differential Input Pressure	Part No.
Pneumatic Step Controller (10 contacts)	256-1015

Dimensions

Dimensions shown in inches (mm).
