Professional **selection** and **calculation** with **Coolselector®2**

Market leading software for all refrigeration professionals.

Coolselector®2 is your one-stop-shop for all of the component selection information you need. The software not only enables you to calculate and select both commercial and industrial components, it is also intuitive and easy to use. **Coolselector®2** works both offline and online, so it works wherever you do. The software offers complete pressure drop calculations, shown graphically, as well as pipe and valve design analysis. You can also generate performance reports and save your selections for future projects.

One

software for all
your selection and
calculation needs.

Troubleshooting made **easy** with **Trouble Shooter** app

Make the complex simple and embrace the power to troubleshoot on-site.

24/7

access to
troubleshooting.

Trouble Shooter is one of several Danfoss apps designed to **make your life easier**. Trouble Shooter helps you identify the problems so you can get the refrigeration system up and running in no time. Simply fill in the required details and the handy troubleshooter app provides you with a list of symptoms linked to possible solutions. **It empowers you to troubleshoot 24/7!**

Introduction and Overview

Danfoss T2/TE2 are brass body thermostatic expansion valves which feature flare inlet and outlet connections (1,2).

Several contractor friendly features are built into the valve. The replaceable orifice assembly (3) design permits easy sizing of the valve from 1/40 to 5 1/2 tons with dirt protection filter. The valve's body includes a laser-welded, non-replaceable steel power-head (4) which significantly reduces power-head failures and preserves the diaphragm's integrity, the primary cause of a failure. The capillary tube and sensing bulb are made of stainless steel (5) as it's tougher than copper and more resistant to breakage. T2/TE2 valves feature adjustable superheat (6). Last, all identification information is laser engraved on the power-head for durable identification - no paper labels to fall off the valve (7).

Examples of typical applications include:

- Traditional refrigeration systems
- Air conditioning systems
- Transport refrigeration systems

By pairing one valve body with one of eight replaceable orifices, a contractor can satisfy applications from -40 to +50°F and 0.14 to 5.88 tons capacity (capacity dependent on refrigerant).

Quick Select Guide

Thermostatic Expansion Valves, Types T2/TE2

Selection Instructions

1. Select Valve Body

Select the valve body based on refrigerant and need for internal or external equalization using the table on the next page under "Valve Body Selection."

2. Select Orifice

T2/TE2 valve capacities are based on the installed orifice. To select the correct size orifice, use one of the two methods using the "Orifice Selection" section on the following page.

3. Assemble Valve and Install into System

1. Slide the orifice into the valve body and secure using liquid line flare nut
2. Attach evaporator inlet or distributor assembly to valve outlet flare nut
3. Tighten both flare nuts
 - Specification for inlet is 26-33 ft.-lbs
 - Specification for outlet is 37-52 ft.-lbs
4. Secure sensing bulb with enclosed bulb strap to suction line. Bulb should be located between 1:00 and 4:00 on the tube, and the strap should be tight enough that no bulb movement is possible.
5. Wrap insulation tape beginning one inch before the bulb and overlapping each wrap, finishing one inch beyond the bulb on the other end.

4. Adjust Superheat

1. Remove the cap
2. Make superheat adjustments ¼ turn at a time (¼ turn $\approx$ 1.75°F).
 - Turning clockwise increases superheat.
 - Turning counter-clockwise decreases superheat.
3. Reinstall the cap

Product Selection
1. Valve Body Selection

Equalization	R-22	R-404A	R-134a
Internal	068Z3206	068Z3400	068Z3346
External	068Z3209	068Z3403	068Z3348

All valves above have 3/8" x 1/2" flare connections and are designed for evaporator temperatures -40°F to 50°F (N charge). Other variations available, please contact your local Danfoss authorized wholesaler.

2. Orifice Selection

T2/TE2 valve capacities are based on the installed orifice. To select the correct size, use one of the two methods below:

A. System characteristics: Select the orifice using appropriate refrigerant, evaporator temperature, and system capacity.

OR

B. Nominal capacity of the installed valve: Use the nominal capacity of the originally installed valve and match with the nominal capacity in chart (3rd column from left).

Easy to carry kits for truck stock

All T2/TE2 valve bodies and orifices featured on this page and a wrench (pictured middle)	068Z7100
Both TUA/TUAE valve bodies and orifices and T2/TE2 valve bodies and orifices plus gaskets for TUA/TUAE and a wrench (pictured bottom)	068U7001

Kits are plastic cases with foam inserts, all valves and orifices and instructions for selection and installation of the valves. Empty kits and foam available upon request.

All capacity data is in accordance to ARI 750-2007.

¹ Nominal capacity based on condensing temperature of 100°F, an evaporator temperature of 40°F, liquid temperature of 98°F ahead of the valve.

² Capacity based on condensing temperature of 95°F and a vapor free liquid temperature of 88°F ahead of the expansion valve.

Spare parts and accessories are available on page 50.

Introduction and Overview

Danfoss TUA/TUAE are stainless steel (1) thermostatic expansion valves designed for use in a wide range of applications with several contractor friendly features built-in. The replaceable orifice (2) design permits easy sizing of the valve from 1/10 to 4 1/2 tons and allows for easy access to the screen for cleaning. Bi-metal connections (3) of stainless steel and copper allow for fast, easy and cost-effective brazing – there is no need to wet wrap the valve. The valve's body includes a laser-welded, non-replaceable stainless steel power-head (4) which significantly reduces power-head failures and preserves the diaphragm's integrity, the primary cause of a failure. The capillary tube and sensing bulb are made of stainless steel (5) as it's tougher than copper and more resistant to breakage. TUA/TUAE valves feature adjustable superheat (6). Last, all identification information is laser engraved on the power-head for durable identification (7) – no paper labels to fall off the valve.

Due to their small size, light weight and rapid installation time, TUA/TUAE valves are particularly suited for new installations or when replacing a valve in a small space. Examples of typical applications include:

- Ice machines (see pages 10-11 for specific TUA for ice machines)
- Single and multiple door refrigerators and freezers
- Walk-ins
- Glass door merchandisers
- Vending machines
- Display cases
- Air conditioning systems
- Transport refrigeration

By pairing one valve body with one of ten replaceable orifices, a contractor can satisfy applications from -40 to +50°F and 0.04 to 4.44 tons capacity (capacity dependent on refrigerant).

Quick Select Guide

Thermostatic Expansion Valves, Types TUA/TUAE

Selection Instructions

1. Select Valve Body

Select the valve body based on refrigerant and need for internal or external equalization using the table on the next page under "Valve Body Selection."

2. Select Orifice

1. Select one of ten orifices using the "Orifice Selection" section on the following page.
2. Prior to installing into system, verify that only mesh portions of the screen cover the orifice inlet.

3. Assemble Valve

1. Place one drop of refrigerant oil between the screen cage and the pushpin.
 2. Verify that the metal gasket is seated on the base of the orifice.
 3. Tighten orifice into valve (specification is 26-30 ft.-lbs.). In addition to eliminating leaks, proper torquing insures proper superheat control.
- ▶ Replace the metal washer/gasket that is mounted at the base of the orifice every time you change the orifice assembly or remove it from the valve body.

4. Braze Valve into System

1. Clean and insert copper tubing into appropriate connection on valve.
 2. Direct torch at copper tubing until it begins to color (10-15 seconds).
 3. Briefly direct torch on valve connection (2-5 seconds).
 4. Apply brazing alloy until it flows.
Do not try to fill the ridge. Attempts to do so may clog the connector.
- ▶ Sweat connections using any common brazing alloy (minimum 5% silver, recommended 15% silver). As internal connector surface is copper, connections are copper to copper, and there is no need for use of high content silver solder or flux.
- ▶ **NO WET WRAP REQUIRED**
5. Secure sensing bulb with enclosed bulb strap to suction line. Bulb should be located between 1:00 and 4:00 on the tube, and the strap should be tight enough that no bulb movement is possible.
 6. Wrap insulation tape beginning one inch before the bulb and overlapping each wrap, finishing one inch beyond the bulb on the other end.

5. Adjust Superheat

1. Remove the cap with a $\frac{5}{32}$ " Allen wrench.
 2. Make superheat adjustments $\frac{1}{4}$ turn at a time ($\frac{1}{4}$ turn $\approx 1^\circ\text{F}$).
 - Turning clockwise increases superheat.
 - Turning counter-clockwise decreases superheat.
 3. Reinstall the cap.
- ▶ Expansion valves on low temperature systems may require more adjustment as the factory setting is for medium temperature systems.

Scan the QR Code for a video with more information on TUA valve features and installation or visit <http://bit.ly/TUValve>

Quick Select Guide

Thermostatic Expansion Valves, Types TUA/TUAE

Product Selection

1. Valve Body Selection

Equalization	R-22	R-404A	R-134a
Internal	068U2235	068U2285	068U2205
External	068U2237	068U2287	068U2207

All valves above have 3/8" x 1/2" solder ODF connections and are designed for evaporator temperatures -40°F to 50°F (N charge). Other variations available, please contact your local Danfoss authorized wholesaler.

2. Orifice Selection

TUA/TUAE valve capacities are based on the installed orifice. To select the correct size, use one of the two methods below:

A. System characteristics: Select the orifice using appropriate refrigerant, evaporator temperature, and system capacity.

OR

B. Nominal capacity of the installed valve: Use the nominal capacity of the originally installed valve and match with the nominal capacity in chart (3rd column from left).

Easy to carry kits for truck stock

All capacity data is in accordance to ARI 750-2007.

¹ Nominal capacity based on condensing temperature of 100°F, a vapor free liquid temperature of 98°F ahead of the expansion valve and an evaporator temperature of 40°F.

² Capacity based on condensing temperature of 95°F and a vapor free liquid temperature of 85°F ahead of the expansion valve.

Spare parts and accessories are available on page 50.

Introduction and Overview

TUA universal thermostatic expansion valve kits for ice machines. These kits are designed with the contractor in mind to help save time and money by providing a universal valve that can easily be adapted to replace most OEM specific thermostatic expansion valves. Two kits were developed, each of which include an exchangeable orifice valve and a selection of (3) orifice sizes covering ice machines ranging from 75 to 2300 pounds of ice per day. The kits also include copper fittings (2 elbows and 1 reducer), copper bulb strap, insulation tape and instructions to allow for replacement of most OEM expansion valves originally installed.

Laser engraved product information for lasting identification of valve type

Laser welded, non replaceable stainless steel power-head

Bi-metal connections for fast and easy brazing with no wet wrap

Stainless steel capillary tube and sensing bulb

Decades of experience working with ice machines ensures optimal bulb charge for fast and precise capacity control

Replaceable orifice allows for capacity adaptations with a single valve and enables access to the screen for cleaning

Scan the QR Code for a video with more information on the TUA ice machine kits or visit <http://bit.ly/TUAicekit>

Quick Select Guide

Thermostatic Expansion Valves for Ice Machines, Type TUA

Selection Instructions

1. Determine the type of machine (cube, flake, or nugget), output of the machine in pounds of ice per 24 hours, and the number of expansion devices installed.
2. Divide the output in pounds of ice by the number of expansion valves.
3. Use the appropriate selection table below under Product Selection to determine the correct orifice size for the ice output per expansion valve.
4. Adhere to start up and performance measurements as specified in the Instructions included with the kit.
- After the new valve is installed and the machine is back in operation, it is important to verify appropriate superheat performance. Cube ice machines typically start cycles with high superheat, which decreases as a harvest cycle approaches.

A properly sized and adjusted valve will assure adequate capacity during all phases of the freeze cycle and positive superheat through the cycle. As the valve nears the end of the freeze cycle it is imperative that you accurately measure the evaporator superheat.

1. Inspect the ice for sufficient production.
2. Inspect the suction line just before the compressor for any frost that could indicate liquid flooding.
3. Measure superheat at the end of the freeze cycle.
4. If superheat is between 10°F and 18°F, ice is forming appropriately, and there is no sign of liquid flooding, the installation is complete.
5. If superheat is below 10°F, increase superheat.
6. If superheat is above 18°F, decrease superheat.
7. If after adjusting superheat you still see too low superheat or liquid flooding, please install the next smaller orifice and repeat this process.
8. If after adjusting superheat you still see too high superheat or insufficient ice formation, please install the next larger orifice and repeat this process.

If superheat adjustment is necessary, follow these steps:

1. Remove the cap with a 5/32" Allen wrench.
2. Make superheat adjustments ¼ turn at a time (¼ turn ≈ 1°F).
 - Turning clockwise increases superheat.
 - Turning counter-clockwise decreases superheat.
3. Reinstall the cap.

Product Selection

Expansion valve kit for small ice machines

Danfoss Code No. 068U4900 ¹		
Cuber	Flaker/Nugget	
Nameplate lbs. of ice/24 hrs per valve		Estimated orifice size
75 to 150	75 to 200	1
151 to 350	201 to 500	3
351 to 600	501 to 950	5

Valve in kit above has straightway ¼" x ⅜" ODF connections.

Expansion valve kit for large ice machines

Danfoss Code No. 068U4901 ¹		
Cuber	Flaker/Nugget	
Nameplate lbs. of ice/24 hrs per valve		Estimated orifice size
351 to 600	501 to 950	5
601 to 1200	951 to 1650	7
1201 to 1800	1651 to 2300	8

Valve in kit above has straightway ⅜" x ½" ODF connections.

¹ Ice machine kits contain valve, (3) orifices in corresponding tables, (2) elbow fittings, (1) reducer, copper bulb strap, insulation tape and instructions. Spare parts and accessories are available on page 50.

Introduction and Overview

Building on Danfoss' leading OEM position, Danfoss offers the Universal TR6 kit for aftermarket installations.

These kits are ideal for use in installation such as:

- Residential air conditioning systems
- Split systems
- Roof top units
- Heat pumps
- Light commercial air conditioning systems
- Chillers

The hermetic tight design meets environmental demands for today and the future. The TR6 valves are available for R-22 and R-410A systems. The TR6 design incorporates a hot-pressed brass body with the entire laser-welded power element (1), including the 31 1/2" capillary tube (2) and sensing bulb with anti-hunt charge (3) which is fabricated from stainless steel. The valves are supplied standard with straightway 3/8" x 3/8" ODF connections, fixed orifice and with 24" external equalization line with 1/4" flare nut (4). The aftermarket versions are delivered with internal check valve (5) but valve does not meter in both directions. Also, an external superheat adjustment spindle (6) is available for field retrofit. For R-22 valves, 1 turn is approximately 1.8°F and for R-410A valves, 1 turn is approximately 1.1°F. Turn spindle clockwise to increase superheat, counterclockwise to decrease superheat.

All valves are of a balanced port design which reduces the influence from varying condensing pressures. The TR6 valves listed on the next page are delivered with Aeroquip and Chatleff fittings for evaporator connections, insulating tape, a bulb strap and instructions for easy installation in the field.

Product Selection

Select valve using system capacity and refrigerant.

Refrigerant	System Capacity (tons)	Solder ODF connection (in.)	Temperature Range (°F)	Danfoss Code No. ¹
R-410A	1½ - 3	¾ x ¾	14 to 59	067L5955
	3½ - 4			067L5956
	4½ - 5			067L5957
R-22	1½ - 2			067L5856
	2½ - 3			067L5857
	3½ - 4			067L5858
	5 - 6			067L5859

¹ The valve kits listed above are standard aftermarket valves and are built with straightway connections, internal check valve, 24" equalization line with ¼" flare nut, fixed orifice and adjustable superheat spindle. These kits are supplied with the valve, Aeroquip fitting, Chatleff fitting, insulation tape, bulb strap and instructions.

Spare parts and accessories are available on page 50.

Introduction and Overview

TGE is a series of thermostatic expansion valves for R-22/R-407C, R-134a, R-404A and R-410A with fixed orifice. The hermetic tight design meets the environmental demands for today and future in a wide range of applications that include:

- Commercial air conditioning systems
- Heat pumps
- Chillers
- Transport refrigeration
- Other refrigeration systems

Features and specifications include:

- Stainless steel capillary tube and sensing bulb (1) for superior strength and durability.
- Laser welded stainless steel power element for superior joint strength and operational lifetime (2)
- Balanced port design (3) prevents changes in pressure drop across valve from influencing operation.
- Easy adjustment of superheat (4) and protective cap (5).
- R-22 / R-407C and R-410A models designed for evaporator temperatures -22°F to 60°F feature Danfoss' MAH (MOP Anti-Hunt) charge which reduces valve hunting during evaporator load changes in air conditioning applications.
- R-134a, R-404A and R-507 models designed for evaporator temperatures -40°F to 50°F (N charge).
- Designed for bi-flow operations to meet the needs of various applications.
- Maximum working pressure: 667 psig

Introduction and Overview

KPU pressure controls are designed for use in refrigeration and air-conditioning systems to protect the systems from excessively low suction pressure or too high discharge pressure. They can also be applied to start and stop compressors and the fans of air-cooled condensers. KPU pressure controls, in single and dual versions cover a comprehensive range of applications and are designed for use with fluorinated and non-aggressive refrigerants. Most KPU pressure controls can be used on R-410A systems.

Danfoss KPU pressure controls are specifically designed for the North American aftermarket. These products are designed with a universal bolt pattern, snap-action switch (1), easy to access and maintain contacts with 24 FLA rating (2), high visibility, high contrast scale (3), "finger tip" test for contact operation (4), easy access wiring. Danfoss KPU 6 and high pressure side of KPU 16 are designed with fail-safe double bellows design (5) – assuring no loss of refrigerant even if a bellows ruptures. KPU pressure controls function as easy and direct replacements for most competitor controls. Other features include:

- Pressure connection available as 1/4" M flare or with 36" capillary tube with 1/4" flare nut (6)
- Easy adjustment of pressure and differential setting with standard refrigeration wrench. A set screw prevents settings from migrating (7)
- Automatic, manual or convertible reset versions available

Easy adjustment of pressure and differential setting with standard refrigeration wrench. A set screw prevents settings from migrating (7)

Introduction and Overview

Danfoss KPU temperature controls are used for temperature regulation in refrigeration, air conditioning, ventilating and heating systems.

These temperature controls are specifically designed for the North American aftermarket and function as easy and direct replacements for most competitor controls.

The KPU 60/70 temperature controls feature snap-action switches, high visibility and contrast scales, "finger tip" tests, and easy adjustments using a standard refrigeration wrench.

The KPU 19 temperature controls are designed for easy installation and service. They feature bottom and rear knockouts, differential adjustment dial, a tamper-resistant design, and a robust thermoplastic housing.

KPU 60/70

Easy adjustment of temperature setting with hand knob (all but models with manual reset).
Differential setting adjusted with standard refrigeration wrench.
A set screw prevents settings from migrating.

Introduction and Overview

MP 54 and MP 55 oil differential pressure controls are used to protect refrigeration compressors against low oil pressure. These controls are compatible with HCFC and non-flammable HFC refrigerants. These controls feature:

- Reliable, long life stainless steel bellows
- Sturdy metal cover and universal mounting hole patterns
- Integral ½" NPSM swivel connection allows direct attachment of ½" male pipe thread connector
- Simple manual trip, electrical test function eliminates need of tools and test "jumper" wires
- Suitable for both alternating and direct current (AC and DC)
- Versions available with adjustable or fixed differential

Connection to suction side of refrigeration plant, LP

Electrical connection at the front of the unit

½" NPSM swivel connection

Connection to pressure side of lubrication system, OIL

¹ With glow lamp that remains on during normal operation of compressor.

Note: When time delay is energized which also means that min. permissible oil pressure (differential Δp) is reached, light goes out.

² Three-wire hook-up with jumper that is provided in the box with control.

³ The 3321 series controls feature adjustable delay and fixed differential. The differential for 3321-014 controls is set at 15 psig and 3321-015 is at 30 psig. Select control with appropriate delay time.

Capillary tube (Code No. 060-017166) is available in the Spare Parts and Accessories section on page 50.

Quick Select Guide

Solenoid Valves, Type EVR

Introduction and Overview

Danfoss offers a complete and flexible range of solenoid valves for use in refrigeration and A/C systems. EVR solenoid valves are direct or servo-operated solenoid valves for liquid, suction and hot gas lines. They are suitable for all refrigeration, freezing and air conditioning applications and are compatible with fluorinated refrigerants. Versions for high-pressure refrigerants are available by contacting Danfoss. The valves can be delivered as normally open or closed as well as with or without manual operation. Additionally, they have the following features:

- Wide range of coils for AC and DC voltages
- Temperature range from -40° to 220°F
- Flare connections up to 5/8"
- Solder connections up to 2 1/8"
- Solder versions have extended connections; no need to dismantle valve when soldering

Introduction and Overview

WVFX pressure controller water regulating valves are used to regulate the flow of water in a refrigeration system with water-cooled condensers. Water valves regulate water flow thereby controlling and maintaining constant condensing pressure. At shut-down, cooling water flow is shut off automatically. The WVFX valves are designed as wide-range, general purpose valves. Additional features include:

- Knob for easy adjustment of pressure (1)
- Water side connection available with NPT threads – $\frac{3}{8}$ " to 1" (2)
- Condenser side connection available with $\frac{1}{4}$ " M flare or 31" capillary tube with $\frac{1}{4}$ " flare nut with schrader depressor (3)
- Lubricated o-rings reduce drift of initial set point (4)
- Stainless steel control elements (bellows and capsul) extends lifetime of valve (5)
- For HCFC and HFC refrigerants
- Needs no power – self acting
- Opens on rising condensing pressure
- Insensitive to dirt

Quick Select Guide

Pressure Controlled Water Valves, Type WVFX

¹ Competitor valve equipped with capillary tube as in Code No. directly below. Else, see page 50 for capillary tube spare part (Code No. 060-017166) to attach to this Code No. (pictured below).

² Schrader depressor installed at end of capillary tube.

Length of valve from top of knob to bottom of control element is 8.07 in. for WVFX 10, 15, 20 and 8.46 in. for WVFX 25.

Temperature range: -13 to 265°F

Maximum differential pressure: 145 psig

Spare parts and accessories are available on page 50.

Introduction and Overview

Danfoss has a variety of pressure regulators to control the low and high pressure sides and efficient function of a refrigeration system under varying load conditions. Pressure regulators include:

- Evaporator Pressure Regulator, KVP
- Crankcase Pressure Regulator, KVL
- Condensing Pressure Regulator, KVR + NRD
- Hot Gas Bypass Valves, KVC/CPCE

Some of features include:

- All valves available for use with any CFC, HCFC or HFC refrigerant, except R-410A
- Very stable and accurate pressure regulation
- Hermetic brazed construction 100% leak tested
- Available with flare and ODF solder connections
- Stainless steel bellows for extended lifetime
- Built-in valve seat dampening design
- Pressure regulation side
 - KVP/KVR – opens on a rising pressure
 - KVC/KVL – opens on a falling pressure

Spare parts and accessories are available on page 50.

Introduction and Overview

Danfoss DCL/DCB filter driers offer industry leading system protection. These driers use a mixture of molecular sieve and activated alumina to both adsorb system moisture and capture acid and prevent solid contaminants from entering the system. Moisture can clog an expansion device with ice, reducing system efficiency, or can form acids which damage the compressor and other components. Solid contaminants can clog expansion devices and wear compressors prematurely. For aftermarket service, most contractors choose this blend of molecular sieve and activated alumina for both high moisture capacity and acid adsorption capacity. Type DAS are used in the suction line to clean up refrigeration and AC systems with fluorinated refrigerants after a compressor burn-out. The solid core adsorbs harmful acids as well as moisture to protect the compressor from premature failure.

Danfoss filter driers function as simple drop-in replacements for most driers sold in the aftermarket or installed on equipment by manufacturers. All Danfoss filter driers are constructed with a solid core design to maximize moisture removal while minimizing pressure drop. Other product features and benefits are depicted in the picture below.

Black, high-quality and durable coating offers a cleaner appearance after brazing.

One-piece plasma welded shell minimizes risk of refrigerant loss.

Easy to remove pull-off cap for sweat or twist-off cap for flare.

High dirt retention – down to 25 µm particles – with minimal pressure drop.

Eliminator® core for the highest possible drying capacity.

Introduction and Overview

GBC valves are used in liquid, suction and hot gas lines in all refrigeration and air-conditioning systems with fluorinated refrigerants. Danfoss GBC ball valves are manually operated shut-off valves suitable for bi-directional flow (1,2). The design is based on years of experience. The valve concept includes a high precision laser welding (3) ensuring both a strong and a light slim line valve body design. The design, weld, and choice of the sealing material enables the ball valves to meet the most demanding requirements, for example, the high working pressure when operating with R-410A. Additional features include:

- Seal cap with retaining strap (4)
- Burst proof spindle design prevents liquid from being trapped internally (5)
- Rotation stops and position indicator (6)
- Access port with schrader valve saves money if service of the system is necessary (7)
- Valve seat made from teflon to secure maximum tightness and a long lifetime (8)
- Threaded holes for panel mounting holes – M4 (9)
- Full flow with minimum pressure drop
- Slim-line design ensures easy operational handling

Spare parts and accessories are available on page 51.

Quick Select Guide

Sight Glasses, Type SGP

Introduction and Overview

Danfoss sight glasses are designed to accurately indicate the presence of moisture in refrigeration and air-conditioning systems. When system moisture content rises above permissible levels, the “dry/green” indicator will change to yellow indicating a “wet” system. The indication of dangerous moisture levels is essential in helping prevent the formation of harmful acids which are detrimental to the system.

Danfoss offers two types of sight glasses; inline and vessel mount. Inline sight glass, type SGP N is used in the system’s liquid line to indicate both the condition and moisture content of the refrigerant. They incorporate an indicator which changes color dependent on the moisture content. Type SGP N is recommended for HFC refrigerants. Vessel sight glasses, type SGP RN are specially designed to be mounted directly on either a receiver or the compressor crankcase to indicate liquid level. Type SGP RN are available with a refrigerant moisture indicator which can be used with all fluorinated refrigerants.

¹ Can be screwed directly onto Danfoss filter drier.

Introduction and Overview

Specially optimized for use in mobile, household and light commercial applications, these hermetic reciprocating compressors provide high cooling capacity in an energy saving design. The compressor series can be used with multiple refrigerants including R-134a and R-404A (refrigerant dependent on model) that are perfect for cooling needs from 190 to 10800 Btu/h based on ASHRAE conditions.

Product features and options include:

- Compact construction
- Durable housing
- Optimized motor technology
- Wide voltage range
- Easy installation at lower cost
- Low noise and high energy efficiency
- Robust in tough operating conditions

Product Range

¹ Capacity range based on product range represented on following page. For complete range of models (refrigerant, capacity and voltage codes) available, check Coolselector or contact Danfoss.

Introduction and Overview

Optyma™ is the widest range of hermetic condensing units on the market. Optyma™ condensing unit is available with high capacity models of reciprocating and scroll compressors so to cover a large range of commercial refrigeration applications, reducing costs and complexity of the systems.

All Optyma™ condensing units are extremely efficient and reliable. That means less energy consumption and less running costs, less cost for service and maintenance.

Introduction and Overview

Known for their legendary durability, Maneurop® reciprocating compressors from Danfoss are specially designed for applications with a wide range of operating conditions. Maneurop® MT and MTZ series compressors are of the hermetic reciprocating type and are designed for medium and high evaporating temperature applications.

The MT series is designed for use with the “traditional” R-22 refrigerant, using Danfoss mineral oil 160P as lubricant. The MT series can also be applied with several R-22 based refrigerant blends (substitute refrigerants), using 160 ABM alkylbenzene as lubricant. The MTZ series is specifically designed for use with the HFC refrigerants R-407A/C/F, R-134a, R-404A, and R-507A, using 160PZ polyester oil. MT and MTZ compressors have a large internal free volume that protects against the risk of liquid hammering when liquid refrigerant enters the compressor.

MT and MTZ compressors are available in 16 different models with displacement ranging from 1.84 to 16.57 in³/rev. Seven different motor voltage ranges are available, including single and three phase and 50 and 60 Hz models.

¹ These compressor models have threaded sight glass and ⅜" flare oil equalization line.

² To determine the nominal capacity for R-407A/C/F, check Coolselector or visit our Online Datasheet Generator at www.danfoss.com/odsg.

³ Evaporator temperature = 45°F, condensing temperature = 130°F, superheat = 20°F, subcooling = 15°F

⁴ Evaporator temperature = 20°F, condensing temperature = 120°F, superheat = 20°F, subcooling = 0°F

⁵ Actual connection for MT and MTZ 22-28 (208-230/1/60) is rotolock 1¼" x 1" and connection with supplied sleeve is ⅝" x ½" ODF.

Capacitor values and relays for 1 phase compressors are available on page 49.

Spare parts and accessories are available on pages 51-53.

Introduction and Overview

The Maneurop® NTZ series of reciprocating compressors from Danfoss Commercial Compressors are specially designed for low evaporating temperature applications for R-404A and R-507A.

The NTZ series is optimized at -31°F with an extended evaporating temperature range from -49° to 14°F. The compressors can be operated at a suction gas temperature of 68°F even at low evaporating temperatures. A liquid injection system is not required. All components are of a high quality and precision to assure a long product life. NTZ compressors have a large internal free volume that helps to reduce the risk of liquid hammering. The electrical motor is fully suction gas cooled which means that no additional body cooling is required and it allows the compressors to be insulated with an acoustic hood.

Introduction and Overview

Danfoss Residential and Light Commercial Air Conditioning Scroll Compressors install quickly and easily. These compressors feature a design that minimizes internal parts, decreasing overall weight, and significantly reducing the sound produced during operation. With a bolt pattern and liquid and suction line connections that match up almost identically to those of other major scroll compressor manufacturers, Danfoss scroll compressors can be used to replace compressors made by both Danfoss and other companies.

Quick Select Guide

Scroll Compressors, Types SM/SH

Introduction and Overview

Danfoss Performer® Universal Scroll Compressors are designed to serve as quick, easy replacements for most commercial air conditioning scroll compressors. These compressors come with a bolt pattern, suction and discharge lines, and performance characteristics that match up directly with some competitors' products.

Select compressor using the product selection table below based on refrigerant, nominal capacity, connection and voltage.

Nomenclature / Model No.

SM SH 115 090 S A 4 4 Q AL C C

Refrigerant & oil

¹ Competitor Model Nos. beginning "ZP" may have different footprint, suction, discharge or height compared to Danfoss Model No.

² Control voltage of external motor protection module must be checked before crossing to Danfoss Model No with 24V ac or 115/230V motor protection module. Full range of models (refrigerant, tons and voltage codes) available. Check Coolselector or visit our Online Datasheet Generator at www.danfoss.com/odsg. Spare parts and accessories are available on pages 53-54.

Quick Select Guide

Spare Parts and Accessories

Introduction and Overview

The most commonly replaced spare parts and accessories for the products included in this Quick Select Guide are outlined in this section. For additional accessories please consult individual product Technical brochures or contact Danfoss at 1-888-Danfoss.

Product Selection

Product, Type	Description	Danfoss Code No.	Type(s) applied to
Thermostatic Expansion Valves, Types TUA/TUAE/T2/TE2	Bulb strap	068U3507	all
	Metal Gasket (24 pcs)	068U0015	TUA/TUAE
	Filter for orifices 0-4 (clear, 24 pcs)	068U1706	TUA/TUAE
	Filter for orifices 5-9 (blue, 24 pcs)	068U0016	TUA/TUAE
Thermostatic Expansion Valves, Type TR6	Bulb strap	068U3507	all
	Fitting; 3/8" ODM x Chatleff	119F3965	
	Fitting; 3/8" ODM x Aeroquip	119F3966	
Thermostatic Expansion Valves, Type TGE	Bulb strap	067N0557	all
Pressure Controls, Types KPU/MP	Capillary tube; 39" with 1/4" flare coupling nuts on each end	060-017166	KPU and MP with 1/4" M flare
Solenoid Valves, Type EVR	Permanent magnet coil for servicing and testing	018F0091	all
	Service kit; o-ring, (4) screws, armature assembly, rubber gasket	032F0181	EVR 2, 3
	Service kit; diaphragm, o-ring for armature tube, (4) screws T20, (4) screws T15, armature assembly, rubber gasket, o-ring for steel cover, square gasket for steel cover, support ring	032F8166	EVR 6
	Service kit; diaphragm assembly, o-ring, (4) screws, armature assembly, rubber gasket	032F0185	EVR 10
	Service kit; diaphragm assembly, o-ring, (4) screws, armature assembly, rubber gasket, flange gasket	032F0187	EVR 15, 18
	Service kit; diaphragm assembly, o-ring, (4) screws, armature assembly, compression spring, rubber gasket	032F0189	EVR 20, 22
	Manual spindle	032F0193	EVR 20, 22
	Piston service kit; (2) o-ring, spring, piston assembly, plastic block, rubber gasket, piston ring	032F3236	EVR 25
	Pilot service kit; armature tube assembly, armature, (2) Al. gaskets, orifice, o-ring	042H0161	EVR 25
	Seal kit; (2) Al. gaskets, (3) o-rings, (2) rubber gaskets	032F3235	EVR 25
	Piston service kit; (5) o-rings, Al. gasket, piston assembly, plastic block, gasket, piston ring, spring	042H0172	EVR 32
	Pilot service kit; (2) Al. gaskets, o-ring, orifice, armature tube assembly, armature	042H0165	EVR 32
	Seal kit; (4) o-rings, (2) Al. gaskets, gasket	042H0160	EVR 32
	Piston seal kit; (5) o-rings, Al. gasket, piston assembly, plastic block, gasket, piston ring, spring	042H0173	EVR 40
	Seal kit; (5) o-rings, (2) Al. gaskets, gasket	042H0160	EVR 40
Pressure Controlled Water Valves, Types WVFX	Rebuild kit; valve disc, (2) o-rings, (8) screws, (2) diaphragms, grease and key	003N4006	WVFX 10, 15
	Rebuild kit; valve disc, (2) o-rings, (8) screws, (2) diaphragms, grease and key	003N4007	WVFX 20
	Rebuild kit; valve disc, (2) o-rings, (8) screws, (2) diaphragms, grease and key	003N4008	WVFX 25
	Capillary tube; 39" with 1/4" flare coupling nuts on each end	060-017166	WVFX with 1/4" M flare
	Bracket	003N0388	all
Pressure Regulators, Types KVP/KVR/KVL/KVC/CPCE	Schrader valve	034L0006	all KVP, KVR

Product, Type	Description	Danfoss Code No.	Type(s) applied to
Ball Valves, Type GBC	Ball valve service kit	009G7012	GBC 6, 10, 12, 16, 18, 22
	Ball valve service kit	009G7014	GBC 28, 35
	Ball valve service kit	009G7016	GBC 42, 54, 67
	Ball valve replacement cap	009G7210	GBC 6, 10, 12, 16, 18, 22
	Ball valve replacement cap	009G7211	GBC 28, 35
	Ball valve replacement cap	009G7212	GBC 42, 54, 67
Condensing Units, Optyma™	Compressors, fan motors, fan blades, relays, capacitors	various - contact Danfoss	various
	Enclosure - E1	119-6040	1/8 to 1/4 hp
	Enclosure - E2	119-6041	1/8 to 2 hp
	Enclosure - E3	119-6042	2 1/2 to 3 hp
	Enclosure - E4	119-6043	4 hp
	Enclosure - E5	119-6044	5 to 7 hp
	Enclosure - E6	119-6045	9 to 13 1/2 hp
Reciprocating Compressors, Types MT/MTZ/ NTZ	Belt type crankcase heater; 54W, 230V	7773106	MT(Z) 018-040, NTZ048-068
	Belt type crankcase heater; 65W, 110V	7773109	MT(Z) 044-081, NTZ096-136
	Belt type crankcase heater; 65W, 230V	7773107	
	Belt type crankcase heater; 65W, 400V	7773117	
	Belt type crankcase heater; 65W, 460V	120Z0466	
	Belt type crankcase heater; 75W, 110V	7773110	MT(Z) 100-160, NTZ215-271
	Belt type crankcase heater; 75W, 230V	7773108	
	Belt type crankcase heater; 75W, 400V	7773118	
	Belt type crankcase heater; 75W, 460V	120Z0464	
	PTC heater	PTC	all
	Mounting kit - 1&2 cylinder compressors	8156001	MT(Z) 18-81, NTZ048-136
	Mounting kit - 4 cylinder compressors	8156007	MT(Z) 100-160, NTZ215-271
	Mineral oil, 160P; 2 liter can	7754001	all MT
	Mineral oil, 160P; 5 liter can	7754002	all MT
	POE lubricant, 160PZ; 1 liter can	7754019	all MTZ
	Oil sight glass and gasket	8156019	all
	Terminal box; include cover and clamp	8156134	MT(Z) 18-44 for 208-230/1/60 18-72 for 200-230/3/60 18-80 for 460/3/60, NTZ048-136 (except 136-1)
	Terminal box; include cover and clamp	8156135	MT(Z) 50-64 for 208-230/1/60 80-160 for 200-230/3/60 100-160 for 460/3/60, NTZ136-1, NTZ215-271
