

MP8000 Series Pneumatic Valve Actuators

MP8000 Series Pneumatic Valve Actuators are designed to accurately position chilled water, hot water, and steam control valves in response to a pneumatic signal from a controller. A pneumatic or electric valve positioner can be ordered separately for use in applications where sequential operation is desired or additional positioning power is necessary. MP8000 Series actuators have a molded, synthetic rubber diaphragm contained in a sturdy, corrosion-resistant housing that protects against dirt and damage. This molded diaphragm provides a constant effective area throughout the actuator stroke.

Features and Benefits	
<input type="checkbox"/> Designed for Use in Hot Water, Chilled Water, and Steam Applications	Allows for universal application
<input type="checkbox"/> Field-Reversible Action	Allows for selectable spring-return-up or spring-return-down action on Normally Open (N.O.) valves
<input type="checkbox"/> Corrosion-Resistant Housing	Ensures long life by providing strength and corrosion resistance
<input type="checkbox"/> Position Indicator Included with Every Actuator	Provides visual indication of valve stem position

Note: To order an MP8000 Series Pneumatic Valve Actuator factory mounted on a VG7000 Series Bronze Control Valve, refer to the *VG7000 Series Bronze Control Valves Product/Technical Bulletin (LIT-977140)*. To order an MP8000 Series Pneumatic Valve Actuator factory mounted on a VG2000 Series Cast Iron Flanged Globe Valve, refer to the *VG2000 Series Cast Iron Flanged Globe Valves Product/Technical Bulletin (LIT-977133)*.

Operation

Air pressure from a pneumatic controller is applied to the diaphragm of the actuator, which moves the piston against the fluid and actuator spring forces. The piston will move the valve stem and plug until the diaphragm pressure balances the actuator return spring force and the fluid forces. Reducing the air pressure permits the spring to return the valve plug to its normal position. With no control air pressure applied to the diaphragm, the valve is in the normal position.

For applications requiring stable, accurate control and sequencing, a V-9502 Pneumatic Valve Actuator Positioner or an EPP-1000 Electro-Pneumatic Actuator Positioner is available for mounting in the field. Refer to Table 3 for a list of positioners and positioner mounting kits available.

Both styles of positioners are factory calibrated to match the nominal spring range of the valve and actuator assembly. For more information regarding these positioners, refer to the *V-9502 Pneumatic Valve Actuator Positioner Product Bulletin (LIT-977265)* or the *EPP-1000 Series Electro-Pneumatic Positioners Product Bulletin (LIT-2681270)*.

Repair Information

Replacement diaphragm and seal kits are available for MP8000 Series Pneumatic Valve Actuators; refer to Table 5 for ordering information and additional details. For a replacement MP8000 Actuator, refer to Table 1.

Table 5: Repair Parts (Order Separately)

Description	Code Number
Seal Kit for All MP8000 Series Actuators	MP8000-6001
Diaphragm and Seal Kit for MP82 and MP83 Series Actuators	MP8000-6325
Diaphragm and Seal Kit for MP84, MP85, MP86, and MP87 Series Actuators (Two Kits Required for MP86 and MP87 Series Actuators)	MP8000-6350
Repair Tool Kit (Required for Diaphragm and Seal Replacement)	MP8000-6012*

* This kit includes a strap handle and polyester strap, stem wrench, and 7/16 in. hex tool.
